Spotting and Discovering Terms Through Natural Language Processing Christian Jacquemin, 2001 The acquired parsed terms can then be applied for precise retrieval and assembly of information **BOOK JACKET** **Application-driven Terminology Engineering** Fidelia Ibekwe-SanJuan, Anne Condamines, Maria Teresa Cabré, 2007-01-01 A common framework under which the various studies on terminology processing can be viewed is to consider not only the texts from which the terminological resources are built but particularly the applications targeted The current book first published as a Special Issue of Terminology 11 1 2005 analyses the influence of applications on term definition and processing Two types of applications have been identified intermediary and terminal applications involving end users Intermediary applications concern the building of terminological knowledge resources such as domain specific dictionaries ontologies thesaurus or taxonomies These knowledge resources then form the inputs to terminal applications such as information extraction information retrieval science and technology watch or automated book index building Most of the applications dealt with in the book fall into the first category This book represents the first attempt from a pluridisciplinary viewpoint to take into account the role of applications in the processing of terminology *Agents and Artificial Intelligence* Joaquim Filipe, Ana Fred, 2013-04-10 This book constitutes the thoroughly refereed post conference proceedings of the 4th International Conference on Agents and Artificial Intelligence ICAART 2012 held in Vilamoura Portugal in February 2012 The 28 revised full papers presented together with one invited paper were carefully reviewed and selected from 292 submissions The papers are organized in two topical sections on artificial intelligence and on agents Text- and Speech-Triggered Information Access Steve Renals, Gregory Grefenstette, 2003-08-04 This book presents revised versions of the lectures given at the 8th ELSNET European Summer School on Language and Speech Communication held on the Island of Chios Greece in summer 2000 Besides an introductory survey the book presents lectures on data analysis for multimedia libraries pronunciation modeling for large vocabulary speech recognition statistical language modeling very large scale information retrieval reduction of information variation in text and a concluding chapter on open questions in research for linguistics in information access The book gives newcomers to language and speech communication a clear overview of the main technologies and problems in the area Researchers and professionals active in the area will appreciate the book as a concise review of the technologies used in text and speech triggered information access **Handbook of Terminology** Hendrik J. Kockaert, Frieda Steurs, 2015-03-13 Terminology has started to explore unbeaten paths since W ster and has nowadays grown into a multi faceted science which seems to have reached adulthood thanks to integrating multiple contributions not only from different linguistic schools including computer corpus variational socio cognitive and socio communicative linguistics and frame based semantics but also from engineering and formal language developers In this ever changing and diverse context Terminology offers a wide range of opportunities ranging from standardized and prescriptive to prototype and user

based approaches At this point of its road map Terminology can nowadays claim to offer user based and user oriented hence user friendly approaches to terminological phenomena when searching extracting and analysing relevant terminology in online corpora when building term bases that contribute to efficient communication among domain experts in languages for special purposes or even when proposing terms and definitions formed on the basis of a generally agreed consensus in international standard bodies Terminology is now ready to advance further thanks to the integration of meaning description taking into account dynamic natural language phenomena and of consensus based terminology management in order to help experts communicate in their domain specific languages In this Handbook of Terminology HoT the symbiosis of Terminology with Linguistics allows a mature and multi dimensional reflection on terminological phenomena which will eventually generate future applications which have not been tested yet in natural language The HoT aims at disseminating knowledge about terminology management and at providing easy access to a large range of topics traditions best practices and methods to a broad audience students researchers professionals and lecturers in Terminology scholars and experts from other disciplines among which linguistics life sciences metrology chemistry law studies machine engineering and actually any expert domain In addition the HoT addresses any of those with a professional or personal interest in multilingual terminology translation interpreting localization editing etc such as communication specialists translators scientists editors public servants brand managers engineers intercultural organization specialists and experts in any field Moreover the HoT offers added value in that it is the first handbook with this scope in Terminology which has both a print edition also available as a PDF e book and an online version For access to the Handbook of Terminology Online please visit <http://www.benjamins.com/online/hot> The HoT is linked to the Handbook of Translation Studies not in the least because of its interdisciplinary approaches but also because of the inevitable intertwining between translation and terminology All chapters are written by specialists in the different subfields and are peer reviewed

The Oxford Handbook of the Word John R. Taylor, 2015-06-25 This handbook addresses words in all their multifarious aspects and brings together scholars from every relevant discipline to do so The many subjects covered include word frequencies sounds and sound symbolism the structure of words taboo words lexical borrowing words in dictionaries and thesauri word origins and change place and personal names nicknames taxonomies word acquisition and bilingualism words in the mind word disorders and word games puns and puzzles Words are the most basic of all linguistic units the aspect of language of which everyone is likely to be most conscious A new word that makes it into the OED is prime news when baby says its first word its parents reckon it has started to speak knowing a language is often taken to mean knowing its words and languages are seen to be related by the similarities between their words Up to the twentieth century linguistic description was mainly an account of words and all the current subdivisions of linguistics have something to say about them A notable feature of human languages is the sheer vastness of their word inventories and scholars and writers have

sometimes deliberately increased the richness of their languages by coining or importing new items into their word hoards

2.1 Text Summarization

Text summarization is the process of distilling the most important information from a source or sources to produce an abridged version for a particular user or users and task or tasks.

3 Basic and classical articles in text summarization appear in *Advances in automatic text summarization*.

3 A literature survey on information extraction and text summarization is given by Zechner.

7 In general, the process of automatic text summarization is divided into three stages:

- 1 analysis of the given text
- 2 summarization of the text
- 3 presentation of the summary in a suitable output form.

Titles, abstracts and keywords are the most common summaries in Academic papers. Usually, the title, the abstract and the keywords are the first, second and third parts of an Academic paper respectively. The title usually describes the main issue discussed in the study, and the abstract presents the reader a short description of the background, the study and its results. A keyword is either a single word (unigram) e.g. learning or a collocation which means a group of two or more words representing an important concept e.g. machine learning, natural language processing.

Retrieving collocations from text was examined by Smadja [5] and automatic extraction of collocations was examined by Kita et al. [1].
