Spectroscopy From Space:

Spectroscopy from Space Jean Demaison, Kamil Sarka, Edward A. Cohen, 2011-04-27 *Space Terahertz Remote Sensing Technology* Weidong Hu, Yuming Bai, Xin Lv, 2024-06-14 This book examines terahertz technology and its applications in atmospheric remote sensing. Terahertz waves are electromagnetic radiation between microwaves and infrared radiation in the electromagnetic spectrum. They have the capability of greater directivity, higher power density, higher resolution imaging, richer fingerprint spectrum, wider bandwidth, and faster transmission rate. Such properties promise great potential for terahertz technology applications in many fields, particularly in the detection of substances and the exploration of space. The book begins with an introduction to the development of space terahertz remote sensing and the underlying theories. The next seven chapters cover the key equipment and critical technologies for terahertz remote sensing, including the terahertz radiometer and its calibration and receiver link, the terahertz reflector antenna and its tolerance analysis, remote sensing imagery, and space resolution enhancement of both oversampled and non-oversampled data. The final chapter presents the application of terahertz imaging technology in the field of security inspection. This title will serve as a valuable reference for academics, students, and engineers in the fields of terahertz technology, space science, and remote sensing. Professionals in atmospheric remote sensing and inspection imaging will also benefit from this book. *Laboratory Astrophysics and Space Research* P. Ehrenfreund, C. Krafft, H. Kochan, Valerio Pirronello, 2012-12-06 The book presents the most recent developments of laboratory studies in astrophysics and space research. The individual chapters review laboratory investigations under simulated space conditions, studies for the design of successful space experiments, or for supporting the interpretation of astronomical and space mission recorded data. Related theoretical models, numerical simulations, and in situ observations demonstrate the necessity of experimental work on the Earth's surface. The expertise of the contributing scientists covers a broad spectrum and is included in general overviews from fundamental science to recent space technology. The book intends to serve as a reference for researchers and graduate students on the most recent activities and results in laboratory astrophysics and to give reviews of their applications in astronomy, planetology, cosmochemistry, space research, and Solar System exploration. *Proceedings of the 8th International Symposium of Space Optical Instruments and Applications* H. Paul Urbach, Deren Li, Dengyun Yu, 2024-10-11 This proceedings volume contains selected and expanded contributions presented at the 8th International Symposium of Space Optical Instruments and Applications held in Beijing, China, on 15-17 November 2023. The symposium was organized by the Sino-Holland Space Optical Instruments Joint Laboratory and supported by Beijing Institute of Space Mechanics and Electricity. In recent years, space optical payloads are advancing towards high spatial resolution, high temporal resolution, high radiometric resolution, and high spectral resolution, and becoming more and more intelligent. Commercial remote sensing industry has made steady progress in terms of the scope of satellite systems and applications. Meanwhile, space optical remote sensing data has been extensively applied to monitoring of

resources meteorology ocean environment disaster reduction and many other fields The symposium focused on key innovations of space based optical instruments and applications and the newest developments in theory technology and applications in optics in both China and Europe It thus provided a platform for exchanges on the latest research and current and planned optical missions The major topics covered in these conference proceedings include but are not limited to 1 Advanced optical technology and new remote sensing technology for space applications 2 Advanced optical material technology and space application 3 Advanced photoelectric converter technology and space application 4 Space optical instruments and applications for deep space exploration and astronomical observation 5 Ecological environment space optical instrument and its application and 6 Commercial space optical remote sensing technology and services
