Spectrum Of A Module Category:

The Spectrum of a Module Category Henning Krause, 2001 These notes present an introduction into the spectrum of the category of modules over a ring We discuss the general theory of pure injective modules and concentrate on the isomorphism classes of indecomposable pure injective modules which form the underlying set of this spectrum The interplay between the spectrum and the category of finitely presented modules provides new insight into the geometrical and homological properties of the category of finitely presented modules Various applications from representation theory of finite dimensional algebras are included

The Category of H -Modules over a Spectrum Jack Palmer Sanders, 1974 The category of H modules over a ring spectrum is introduced We prove that mapping cones can be constructed in the category and that these mapping cones are unique up to equivalence Other H modules are constructed by induction and a limit process We prove that each of the classical Thom spectra MO MSO MU MSU and $M\mathbb{S}p$ is a convergent H module over itself Finally we construct a tower of homology theories and natural transformations from MU

$\mathbb{S}$ -Modules in the Category of Schemes Po Hu, 2003 Gives a theory S modules for Morel and Voevodsky's category of algebraic spectra over an arbitrary field k This work also defines universe change functors as well as other important constructions analogous to those in topology such as the twisted half smash product

Stable Categories and Structured Ring Spectra Andrew J. Blumberg, Teena Gerhardt, Michael A. Hill, 2022-07-21 A graduate level introduction to the homotopical technology in use at the forefront of modern algebraic topology

Equivariant Orthogonal Spectra and $\mathbb{S}$ -Modules M. A. Mandell, J. Peter May, 2002 The last few years have seen a revolution in our understanding of the foundations of stable homotopy theory Many symmetric monoidal model categories of spectra whose homotopy categories are equivalent to the stable homotopy category are now known whereas no such categories were known before 1993 The most well known examples are the category of S modules and the category of symmetric spectra We focus on the category of orthogonal spectra which enjoys some of the best features of S modules and symmetric spectra and which is particularly well suited to equivariant generalization We first complete the nonequivariant theory by comparing orthogonal spectra to S modules We then develop the equivariant theory For a compact Lie group G we construct a symmetric monoidal model category of orthogonal G spectra whose homotopy category is equivalent to the classical stable homotopy category of G spectra We also complete the theory of S_G modules and compare the categories of orthogonal G spectra and S_G modules A key feature is the analysis of change of universe change of group fixed point and orbit functors in these two highly structured categories for the study of equivariant stable homotopy theory

Purity, Spectra and Localisation Mike Prest, 2009-06-04 A unified coherent account of the algebraic aspects and uses of the Ziegler spectrum It may be used as an introductory graduate level text providing relevant background material and a wealth of illustrated examples An extensive index and thorough referencing also make this book an ideal reference

Rings, Modules, and Algebras in Stable Homotopy Theory Anthony D. Elmendorf, 1997 This book

introduces a new point set level approach to stable homotopy theory that has already had many applications and promises to have a lasting impact on the subject Given the sphere spectrum S the authors construct an associative commutative and unital smash product in a complete and cocomplete category of S modules whose derived category is equivalent to the classical stable homotopy category This construction allows for a simple and algebraically manageable definition of S algebras and commutative S algebras in terms of associative or associative and commutative products $R \wedge SR \rightarrowtail R$ These notions are essentially equivalent to the earlier notions of A -infty and E -infty ring spectra and the older notions feed naturally into the new framework to provide plentiful examples There is an equally simple definition of R modules in terms of maps $R \wedge SM \rightarrowtail M$ When R is commutative the category of R modules also has a
