Complex Adaptive Leadership Nick Obolensky, 2017-03-02 Complex Adaptive Leadership argues leadership should not be something only exercised by nominated leaders It is a complex dynamic process involving all those engaged in a particular enterprise The theoretical background to this lies in complexity science and chaos theory spoken and written about in the context of leadership for the last 20 years but still little understood We all seem intuitively to know leadership isn't what it used to be but we still cling to old assumptions which look anachronistic in changing and challenging times Organisations and their contexts are increasingly paradoxical and uncertain A broader approach to leadership is needed Nick Obolensky has practised leadership in the public private and voluntary sectors He has also researched it and taught it over many years in leading business schools In this exciting book he brings together his knowledge of theory his own experience and the results of 15 years of research involving 1 500 executives in 40 countries around the world The main conclusion from that research is that the more complex things become the less traditional directive leadership is needed Those operating in the real world nonetheless need ways of coping The book is focused on helping practitioners struggling to interpret and react to increasingly complex events Arranged in four parts it provides a number of exercises tools and models that will help the reader to understand why the context for leadership has changed and why complexities in organisations have emerged what complexity is and what lessons can be drawn from this emergent area

of scientific study how Complex Adaptive Leadership can be exercised in a very practical way at two levels organisationally and individually and how to get more for less the actions that can be taken when Complex Adaptive Leadership is applied The book will particularly appeal to practitioners wishing to add to their knowledge of leadership theory **Rethinking**

Dealing with Dysfunction Jorrit de Jong, 2016-09-13 How can we intervene in the systemic bureaucratic dysfunction that beleaguers the public sector De Jong examines the roots of this dysfunction and presents a novel approach to solving it Drawing from academic literature on bureaucracy and problem solving in the public sector and the clinical work of the Kafka Brigade a social enterprise based in the Netherlands dedicated to diagnosing and remedying bureaucratic dysfunction in practice this study reveals the shortcomings of conventional approaches to bureaucratic reform The usual methods have failed to diagnose problems distinguish symptoms or identify root causes in a comprehensive or satisfactory way They have also failed to engage clients professionals and midlevel managers in understanding and addressing the dysfunction that plagues them This book offers conceptual frameworks theoretical insights and practical lessons for dealing with the problem It sets a course for rigorous public problem solving to create governments that can be more effective efficient equitable and responsive to social concerns De Jong argues that successfully remedying bureaucratic dysfunction depends on employing diagnostics capable of distinguishing and dissecting various kinds of dysfunction The Anna Karenina principle applies here all well functioning bureaucracies are alike every dysfunctional bureaucracy is dysfunctional in its own way The author also asserts that the worst dysfunction occurs when multiple organizations share responsibility for a problem but no single organization is primarily responsible for solving it This points to a need for creating and reinforcing distributed problem solving capacity focused on deep cross organizational learning and revised accountability structures Our best approach to dealing with dysfunction may therefore not be top down regulatory reform but rather relentless bottom up and cross boundary leadership and innovation Using fourteen clinical cases of bureaucratic dysfunction investigated by the Kafka Brigade the author demonstrates how a proper process for identifying defining diagnosing and remedying the problem can produce better outcomes **Managing Network Resources** Ranjay Gulati, 2007-03-15 Today s firms are increasingly

embedded in networks of alliances and other ties that influence their behavior and performance In this his first book on the subject Ranjay Gulati examines the network resources that arise from these ties how successful firms manage these and how they influence strategy access to material resources and perceptions of a firm s legitimacy held by key external parties such as investors and banks The book synthesises Gulati s influential work on network dynamics from the last fifteen years and presents the key findings from this extensive body of research Gulati s insights are important for scholars students and

practitioners interested in the behavior of firms in an increasingly networked economy Ranjay Gulati is one of the leading theorists and researchers studying alliances and networks and has written widely on the subject His work has been published in leading academic journals such as Administrative Science Quarterly and in the Harvard Business Review

Organizational Data Mining Hamid R. Nemati, Christopher D. Barko, 2004-01-01 Mountains of business data are piling up in organizations every day These organizations collect data from multiple sources both internal and external These sources include legacy systems customer relationship management and enterprise resource planning applications online and e commerce systems government organizations and business suppliers and partners A recent study from the University of California at Berkeley found the amount of data organizations collect and store in enterprise databases doubles every year and slightly more than half of this data will consist of reference information which is the kind of information strategic business applications and decision support systems demand Kestelyn 2002 Terabyte sized 1 000 megabytes databases are commonplace in organizations today and this enormous growth will make petabyte sized databases 1 000 terabytes a reality within the next few years Whiting 2002 By 2004 the Gartner Group estimates worldwide data volumes will be 30 times those of 1999 which translates into more data having been produced in the last 30 years than during the previous 5 000 Wurman 1989
