Sleep And Dreaming Origins Nature And Functions:

Sleep & Dreaming D. Cohen, 2013-10-22 Sleep and dreaming are manifestations in higher organisms of a fundamental circadian rhythm of inactivity activity During the past thirty years research has provided a great deal of new information about the phenomenon and phenomenology of sleep and the relationship between sleep and wakefulness This book aims to describe organise and interpret some of this new knowledge in order to stimulate a greater appreciation of the role of sleep and dreaming in human adaptation The study of sleep and dreaming provides a very special perspective on human functioning It stands in direct contrast to more traditional paradigms utilised in psychology that place the locus of explanation of human behaviour in the external environment The Neuropsychology of Sleep and Dreaming John S.

Antrobus, Mario Bertini, 2013-01-11 This volume describes how the conceptual and technical sophistication of contemporary cognitive and neuroscientific fields has enhanced the neurocognitive understanding of dreaming sleep Because it is the only naturally occurring state in which the active brain produces elaborate cognitive processes in the absence of sensory input the study of dreaming offers a unique cognitive and neurophysiological view of the production of higher cognitive processes The theory and research included is driven by the search for the most direct relationships linking the neurophysiological characteristics of sleepers to their concurrent cognitive experiences The search is organized around three sets of theoretical models and the three classes of neurocognitive relationships upon which they are based The contributions to this volume demonstrate that the field has begun to move in new directions opened up by the rapid advances in contemporary cognitive science neuropsychology and neurophysiology Sleep and Dreaming: Origins, Nature and Functions David B. Hundredth Monkey Kendrick Frazier, 2023-10-17 The Hundredth Monkey takes its title from philosopher Ron Amundson's expose of the Hundredth Monkey Phenomenon a claim about collective consciousness Forty three essays by thirty nine authors including Isaac Asimov Martin Gardner Carl Sagan Ray Hyman Paul Kurtz and James Randi examine aspects of paranormal and fringe science beliefs from an authoritative scientific point of view The penetrating and entertaining essays many with timely postscripts are grouped into nine categories Understanding Human Need Examining Popular Claims Encouraging Critical Thinking Medical Controversies Evaluating the Anomalous Experience Astrology Considering Parapsychology Crashed Saucer Claims Controversies Within Science Scientists and scholars discuss the burden of skepticism and the delicate balance between a creative openness to new ideas and the relentless scrutiny of new claims A classic source book for scientifically responsible explanations of controversies hoaxes bizarre mysteries and popular cultural myths The Evolution of Human Sociability Ron Vannelli, 2015-09-25 How do desires and fears motivate human sociability What effect do these motivators have on reproductive social and political behaviour And crucially how might we understand them separate from preconceived notions of design or higher morality Taking these questions as a focus this book examines human evolution with the emphasis on sexual selection and the evolution of a number of human psychological processes

Exploring evolutionary sexual and maturational processes along with primate fossil and geological evidence Vannelli argues that human nature can be conceptualised as species typical desires and fears derived from sexual selection during human evolution and that these are major motivators of behaviour Presenting additional evidence from the anthropology of band societies along with material from group behaviour Vannelli highlights the importance of pair bonding friendship alliance behaviour vengeance seeking and interpersonal politics in social behaviour providing a unique interdisciplinary framework for understanding human nature and the evolution of human sociability

Sex and Behavior McGill, 2013-06-29 Discussion of the precise nature and position of boundaries between disciplines is nearly always counterproductive the need is usually to cross them not to emphasize them And any such discussion of the distinction between ethology and comparative psychology would today seem patently absurd While there may be differences in outlook no boundaries exist But when Frank Beach started in research that was not the case Comparative psychology flourished in the United States whereas ethology was unknown Beach started as a comparative psychologist and has always called himself either that or a behavioral endocrinologist Yet among the comparative psychologists of his generation he has had closer links with the initially European ethologists than almost any other He was indeed one of the editors of the first volume of Behaviour That this should have been so is not surprising once one knows that his Ph D thesis concerned The Neural Basis for Innate Behavior that he used to sleep in the laboratory so that he could watch mother rats giving birth and that in 1935 he was using model young to analyze maternal behavior Furthermore for nine years he worked in the American Museum of Natural History in a department first named Experimental Biology and later when Beach had saved it from extinction and become its chairman the Department of Animal Behavior It was in 1938 during Frank's time at the American Museum that he was first introduced to Niko Tinbergen by Ernst Mayr

Evolutionary Theory and Human Nature Ron Vannelli, 2012-12-06 Evolutionary Theory and Human Nature is an original highly theoretical work dealing with the transition from genes to behavior using general principles of evolution especially those of sexual selection It seeks to develop a seamless transition from genes to human motivations as bio electric brain processes emotional cognitive processes to human nature propensities various constellations of emotional cognitive forces desires and fears to species typical patterns of behavior This work covers two often antagonistic fields biology and the social sciences It should be of strong interest to anthropologists sociologists sociobiologists psychobiologists and psychologists who are interested in the question of human nature influences on social behavior

Conscious Mind, Sleeping Brain J. Gackenbach, S. LaBarge, 2012-12-06 A conscious mind in a sleeping brain the title of this book provides a vivid image of the phenomenon of lucid dreaming in which dreamers are consciously aware that they are dreaming while they seem to be soundly asleep Lucid dreamers could be said to be awake to their inner worlds while they are asleep to the external world Of the many questions that this singular phenomenon may raise two are foremost What is consciousness And what is sleep Although we cannot provide complete answers to either question here we can at least explain the sense in which we are using the two terms We say lucid dreamers are conscious because their subjective reports and behavior indicate that they are explicitly aware of the fact that they are asleep and dreaming in other words they are reflectively conscious of themselves We say lucid dreamers are asleep primarily because they are not in sensory contact with the external world and also because research shows physiological signs of what is conventionally considered REM sleep The evidence presented in this book preliminary as it is still ought to make it clear that lucid dreaming is an experiential and physiological reality Whether we should consider it a paradoxical form of sleep or a paradoxical form of waking or something else entirely it seems too early to tell

Decline and Fall of the Freudian Empire Hans JÃ¼rgen Eysenck, **Evolution and Literary Theory** Joseph Carroll, 1995 Over the past two decades poststructuralism in its myriad forms has come to dominate literary criticism to the exclusion of virtually any other point of view Few scholars have escaped the coercive authority of its programmatic radicalism In Evolution and Literary Theory Joseph Carroll vigorously attacks the foundational principles of poststructuralism and offers in their stead a bold new theory that situates literary criticism within the matrix of evolutionary theory
