Special relativity : the M.I.T. introductory physics series A. P. French, 1968 *Special Relativity* A.P. French, 1968-09-30

The book opens with a description of the smooth transition from Newtonian to Einsteinian behaviour from electrons as their energy is progressively increased and this leads directly to the relativistic expressions for mass momentum and energy of a particle **Special Relativity** Anthony Philip French, 1968 The M I T Introductory Physics Series is the result of a program of careful study planning and development that began in 1960

Relativity Michael Tsampanlis, 2024-05-01 In most undergraduate physics classes Special Relativity is taught from a simplistic point of view using Newtonian concepts rather than the relativistic way of thinking This results in students often finding it difficult to understand properly the new approach new ideas and consequently to solve relativistic problems Furthermore a number of books treat the theory using advanced mathematics which is not necessary for the first approach to the theory This book is intended to serve two roles a To treat a student in a systematic constructive way to the basic structure of the theory and b To provide a large number of solved in detail problems in the kinematics and dynamics of Special Relativity Concerning the first aim the book introduces the basics of four dimensional mathematics i e Lorentz metric relativistic tensors and prepares through working examples the transition to General Relativity which requires besides the relativistic concepts the use of Differential Geometry and tensor analysis The presentation is concise and does not replace a book on Special Relativity Concerning the second intention the large number of problems provides the necessary material which can be used in order to familiarize the student with the relativistic world These problems can be used in the class by the teachers either as working examples or as problem sheets It will be our pleasure if the book will be useful to both students and teachers

The Theory of Special Relativity David Brückner, 2012-12-21 Essay from the year 2012 in the subject Physics Theoretical Physics grade 1 0 language English abstract The essay presents an intuitive approach to the basics of special relativity leading to a mathematical understanding of Lorentz transformations relativistic dynamics and mass energy equivalence Until the end of the nineteenth century the simple Galilean principle of relativity was used to relate physical observations in one frame of reference to another moving relative to it When the phenomena of electromagnetism and light were unified in Maxwell's equations this principle was first called into question as it stood in conflict with the idea of absolute time and motion The most famous experiment that attempted to determine the absolute motion of the earth the

Michelson Morley experiment will be discussed here Subsequently the ideas and postulates contained in Einstein's first paper on relativity will be introduced and hence the kinematic transformations based on the principles will be derived and their implications on the relativity of space and time as well as on Newtonian mechanics will be stated

Introducing Special Relativity W.S.C. Williams, 2019-01-10 Introducing Special Relativity provides an easy and rewarding way into special relativity for first and second year university students studying physics The author establishes the fundamentals of relativity at the outset of this book so readers fully understand the principles and know how to them before moving on to subjects like time dilation that often are a source of difficulty for students The primary topics addressed include conserved relativistic energy and momentum applications of the Lorentz transformation and developments in 20th century physics This volume also reviews some of the early experiments in the development of special relativity

Special Relativity Michael Tsamparlis, 2010-05-17 Writing a new book on the classic subject of Special Relativity on which numerous important physicists have contributed and many books have already been written can be like adding another epicycle to the Ptolemaic cosmology Furthermore it is our belief that if a book has no new elements but simply repeats what is written in the existing literature perhaps with a different style then this is not enough to justify its publication However after having spent a number of years both in class and research with relativity I have come to the conclusion that there exists a place for a new book Since it appears that somewhere along the way mathematics may have obscured and prevailed to the degree that we tend to teach relativity and I believe theoretical physics simply using heavier mathematics without the inspiration and the mastery of the classic physicists of the last century Moreover current trends encourage the application of techniques in producing quick results and not tedious conceptual approaches resulting in long lasting reasoning On the other hand physics cannot be done a la carte stripped from philosophy or to put it in a simple but dramatic context A building is not an accumulation of stones As a result of the above a major aim in the writing of this book has been the distinction between the mathematics of Minkowski space and the physics of relativity
