Beaudreau, 2019-08-07 This is the first book to examine the nuts and bolts of production processes It proposes a truly consistent approach to modeling production processes one that goes beyond the vague principles found in standard economics and provides details that are consistent with the applied mechanics and engineering literature Providing a credible analysis of some of the most pressing questions of our era such as the productivity slowdown and the information paradox and bridging the gap between engineering applied physics economics and management science this book is a fascinating read for anyone interested in industry the modern economy and how physical factors constrain productivity growth Proactive Condition Monitoring of Low-Speed Machines Zhaklina Stamboliska, Eugeniusz Rusiński, Przemysław Moczko, 2014-11-15 This book broadens readers understanding of proactive condition monitoring of low speed machines in heavy industries It focuses on why low speed machines are different than others and how maintenance of these machines should be implemented with particular attention The authors explain the best available monitoring techniques for various equipment and the principle of how to get proactive information from each technique They further put forward possible strategies for application of FEM for detection of faults and technical assessment of machinery Implementation phases are described and industrial case studies of proactive condition monitoring are included Proactive Condition Monitoring of Low Speed Machines is an essential resource for engineers and technical managers across a range of industries as well as design engineers working in industrial product development

Advancements in Electric Machines J. F. Gieras, 2008-11-14 Traditionally electrical machines are classified into d c commutator brushed machines induction asynchronous machines and synchronous machines These three types of electrical machines are still regarded in many academic curricula as fundamental types despite that d c brushed machines except small machines have been gradually abandoned and PM brushless machines PMBM and switched reluctance machines SRM have been in mass production and use for at least two decades Recently new topologies of high torque density motors high speed

motors integrated motor drives and special motors have been developed Progress in electric machines technology is stimulated by new materials new areas of applications impact of power electronics need for energy saving and new technological challenges The development of electric machines in the next few years will mostly be stimulated by computer hardware residential and public applications and transportation systems land sea and air At many Universities teaching and research strategy oriented towards electrical machinery is not up to date and has not been changed in some countries almost since the end of the WWII In spite of many excellent academic research achievements the academia industry collaboration and technology transfer are underestimated or quite often neglected Underestimation of the role of industry unfamiliarity with new trends and restraint from technology transfer results with time in lack of external financial support and drastic decline in the number of students interested in Power Electrical Engineering
