The Age Of Bifurcation Understanding The Changing World:

The Age of Bifurcation Ervin Laszlo, 1991 *The Waves of Time* K. R. Dark, 2016-10-06 Since the end of the Cold War analysts of international politics have given much greater attention to issues of change. It has become increasingly clear to specialists from many fields that any understanding of large scale political change must encompass far longer timescales than has been usual in the study of world politics and must incorporate multi disciplinary perspectives. This book evaluates and draws on relevant theoretical approaches from other disciplines such as sociology, economics, geography, history, anthropology and archaeology as well as evolutionary theory and the mathematical study of complexity. Using an epistemological framework, Dark sets out a theory of long term world political change, the theory of Macrodynamics. This is then applied to historical, anthropological and archaeological data to explain the changing forms of political organization from the earliest human societies to the late twentieth century. The resulting analysis is a reinterpretation of the processes of global political change in the past and present. This in turn opens new areas of enquiry in the study of international relations and has profound implications for how we understand the changing world of today.

The Evolutionary Trajectory
Richard L. Coren, 2003-09-02 Coren's empirically based Evolutionary Trajectory is the result of an innovative application of a cybernetic model of change and growth to the study of evolution.

Systems Science and Cybernetics - Volume I
Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects. This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects, advances in the theories on their inter relations, the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction, not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale. The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic. This subject entry is subdivided into four sections. The first, an introduction to systemic theories, addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic, entropic, axiological and ethical problems deriving from a general systemic cybernetic conceit. Hence the focus in this section is on the historic and philosophical aspects of the subject. Moreover, it may be asserted today that beyond a shadow of a doubt, problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable. Reaching such a perspective requires taking at least the following well known steps: a statement

of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence

Havoc, Thy Name Is Twenty-First Century! Peter Pogany, 2015-10-16 Just to maintain our standard of living we need to grow the worldwide economy at an unsustainable rate As we seek to hit such lofty targets were bound to deplete our resources and cause environmental crises on a scale that we have never seen before Revolutions terrorism and wars will follow Peter Pogany examines the problems we face and argues that human culture is governed by thermodynamic cycles of steady states interrupted by chaotic transitions Specifically he postulates that a steady state was interrupted by World War I with a chaotic transition following World War II which has led us to the current world order His theory predicts that global society is drifting toward a new form of self organization that will recognize limits to demographic economic expansion but only after we go through a new chaotic transition that will start sometime between now and the 2030s Havoc They Name is Twenty First Century delivers sobering thoughts on where the world is headed but it also offers a glimpse of a bright future that we can embrace once we get through the darkness to come

Introduction to Non-equilibrium Physical Chemistry R. P. Rastogi, 2007-10-16 Introduction to Non equilibrium Physical Chemistry presents a critical and comprehensive account of Non equilibrium Physical Chemistry

from theoretical and experimental angle It covers a wide spectrum of non equilibrium phenomena from steady state close to equilibrium to non linear region involving transition to bistability temporal oscillations spatio temporal oscillations and finally to far from equilibrium phenomena such as complex pattern formation dynamic instability at interfaces Chaos and complex growth phenomena fractals in Physico chemical systems Part I of the book deals with theory and experimental studies concerning transport phenomena in membranes Thermo osmosis Electroosmotic and in continuous systems Thermal diffusion Soret effect close to equilibrium Experimental tests provide insight into the domain of validity of Non equilibrium Thermodynamics which is the major theoretical tool for this region Later developments in Extended Irreversible Thermodynamics and Non equilibrium Molecular dynamics have been discussed in the Appendix Part II deals with non linear steady states and bifurcation to multistability temporal and spatio temporal oscillations Chemical waves Similarly Part II deals with more complex phenomena such as Chaos and fractal growth occurring in very far from equilibrium region Newer mathematical techniques for investigating such phenomena along with available experimental studies Part IV deals with analogous non equilibrium phenomena occurring in the real systems Socio political Finance and Living systems etc for which physico chemical systems discussed in earlier chapters provide a useful model for development of theories based on non linear science and science of complexity The book provides a critical account of theoretical studies on non equilibrium phenomenon from region close to equilibrium to far equilibrium Experimental studies have been reported which provide test of the theories and their limitations Impacts of the concepts developed in non equilibrium Physical Chemistry in sociology economics and other social science and living systems has been discussed

The Mind of Society Yvon Provencal, 2013-12-19 First Published in 1999 This book brings together the ideas of theoretician Marvin Minsky and philosopher Pierre Teilhard de Chardin Provencal's theory inverts Minsky's society of the mind into the mind of society giving a new and firm basis to the Teilhardian idea of Noosphere and allowing for unsuspected transdisciplinary regularities between several scientific domains including physics biology and anthropology Provencal aims to show that a very special type of global planetary consciousness is emerging and to explain better the way in which human ideas constitute a global auto organizing system

Stochastic Modeling and Optimization Methods for Critical Infrastructure Protection, Volume 2 Alexei A. Gaivoronski, Pavel S. Knopov, Vladimir I. Norkin, Volodymyr A. Zaslavskyi, 2025-04-29 Stochastic Modeling and Optimization Methods for Critical Infrastructure Protection is a thorough exploration of mathematical models and tools that are designed to strengthen critical infrastructures against threats both natural and adversarial Divided into two volumes this first volume examines stochastic modeling across key economic sectors and their interconnections while the second volume focuses on advanced mathematical methods for enhancing infrastructure protection The book covers a range of themes including risk assessment techniques that account for systemic interdependencies within modern technospheres the dynamics of uncertainty instability and system vulnerabilities The book also presents other topics such as cryptographic

information protection and Shannon's theory of secret systems alongside solutions arising from optimization game theory and machine learning approaches. Featuring research from international collaborations, this book covers both theory and applications offering vital insights for advanced risk management curricula. It is intended not only for researchers but also educators and professionals in infrastructure protection and stochastic optimization. [The Music Producer's Survival Guide](#)

Brian M. Jackson, 2018-03-09. A music career book like no other, *The Music Producer's Survival Guide* offers a wide-ranging exploratory yet refreshing down-to-earth take on living the life of the independent electronic music producer. Brian's thoughtful approach will teach you to integrate your creative passion, your lifestyle, and your technical know-how. *The Music Producer's Survival Guide* is the first music production book to consider the influence of complexity studies and chaos theory on music making and career development. It focuses on practicality while traversing a wide spectrum of topics, including essential creative process techniques, the TR-808, the proliferation of presets, the butterfly effect, granular synthesis, harmonic ratios, altered states, fractal patterns, the dynamics of genre evolution, and much more. Carving out your niche in music today is an invigorating challenge that will test all your skills and capacities. Learn to survive and thrive as a creative technical professional in today's music business with the help of Brian Jackson and *The Music Producer's Survival Guide*. **The Edusemiotics of Images**

Inna Semetsky, 2013-02-11. Semetsky's new book offers a bracing account of Tarot semiotics in view of its deep significance for educational experience. Analyzing the symbolic language of Tarot images that express the intimations of the unconscious, she invites readers to explore novel ways of learning about the nature of ourselves and the world we are situated in. Combining thorough research with an accessible style, this groundbreaking book is essential reading for present and future generations of practitioners, academics, and students across disciplines. Pia Brnzeu, Professor of English Literature and Vice Rector of the University of Timisoara, Romania, author of *Corridors of Mirrors: A sequel to the author's Re-Symbolization of the Self, Human Development and Tarot Hermeneutic and Semiotics Education Experience*. Semetsky's new book presents the Tarot sign system as a school of ethical living. Bringing the philosophies of Peirce, Deleuze, Dewey, Whitehead, and Gebser in a dialogue with the cutting-edge science of coordination dynamics, she grounds the art of Tarot in the logic of signs acting across nature, culture, and human mind. Building on Noddings' maternal factor, Semetsky demonstrates how the lessons embodied in Tarot symbolism recover the feminine value of relations and contribute to Self/Other integration. Such is the message of Tarot.

Merged Evolution Susantha Goonatilake, 2013-10-31 *Merged Evolution* charts the implications of two major forces of change information technology and biotechnology combined with a third force that of artifactual information which is handed down dichronically from computing device to computing device Through developments anticipated in the near future Dr Goonatilake describes the merging of these three systems a convergence which will profoundly affect the biological social and technical fields much more than previous studies have implied Together these changes yield an entirely different history and a different future of the world for life nature and civilization This book addresses the broader issue arising from these important developments using the unifying perspective of general evolutionary theory to yield a fresh and profound insight

Quest For A Unified Theory Wolfgang Hofkirchner, 2013-10-15 First published in 1999 Volume 13 in the 13 volume set titled *World Futures General Evolution Studies* with a common focus of the emerging field of general evolutionary theory This volume will expand across disciplines where scholars from new fields will contribute books that propose general evolution theory in novel contexts The essays are structured with five topics Approaches to Unification Concepts of Information Self Organizing Systems Life and Consciousness Society and Technology

Evolutionary Change Aron Katsenelinboigen, 1997-09-01 The somatic mechanism of change is little understood Although astounding advances in molecular biology have opened up new engineering possibilities to improve the human species as well as eradicate all kinds of pathological characteristics such possibilities pose potentially serious dangers *Evolutionary Change* explores the biological mechanisms of change in their entirety as they fit into the general dynamics of

biological systems and demonstrates the pitfalls of tackling change from too narrow a perspective Using cancer as an example of certain pathological manifestations of these mechanisms of change the author posits a challenging new theory of evolution

Explaining Social Processes Jiří Šubrt, Alemayehu Kumsa, Massimiliano Ruzzeddu, 2020-08-18 This textbook considers understanding social processes to be the main task of sociology From this perspective its authors demonstrate and explain problems which they consider to be crucial for contemporary social science These are topics of a theoretical and epistemological nature which are nevertheless closely connected with social development and issues arising from it The book moves from the more general theoretical questions and dilemmas raised by key social thinkers such as those connected with the concepts of actor agency institutions structures and systems It then leads to theoretical reflections on long term developmental processes associated with the phenomena of power and life in current societies including globalization identities migration etc It provides a comprehensive approach to the essential questions of sociology Lucidly written and including the latest sociological perspectives this book will find wide appeal among social science students and researchers and is also for the socially aware general reader
