Jemec,1998-07 Non invasive bioengineering techniques have become indispensable tools both in the development of drugs and cosmetics and in clinical dermatology These techniques enable researchers to study the structure and function of human skin objectively and quantitatively Recent technological developments have brought new techniques into the laboratory and the hospital among them magnetic resonance imaging optical coherence tomography and microdialysis This book describes these state of the art developments details the application of skin bioengineering techniques for clinical purposes shows their use in the testing of pharmaceuticals and cosmetics and provides an overview of the design and legal aspects of skin bioengineering testing It will be essential reading for dermatologists cosmetologists pharmacologists and toxicologists Handbook of Cosmetic Science and Technology Andre O. Barel,Howard I. Maibach,2001-07-13 This state of the art reference provides comprehensive multidisciplinary coverage of the most recent information on cosmetic ingredients finished products target organs delivery systems and current technology in safety toxicology and dermatological testing Discussing modern innovations such as active cosmetics for the hair skin and Handbook of Cosmetic Science and Technology, Fourth Edition André O. Cosmetics P. Elsner, Hans F. Merk, Howard I. Maibach, 2012-12-06 th Together with the 6 Amendment Council Directive 93/35 EEC to the Cosmetic Directive 76/768 EEC it was the first time that according to Article 7b special claims of efficacy could be legally attributed to cosmetic products but under the obligation to make evidence of the claimed effects also an entirely new controller was introduced the independent safety assessor This indeed means not only progress in reliable and honest marketing arguments but above all transparency as to the respective proof and thus protection of consumer's health Such claims demand high standards in scientifically based methodology and their results in order to prove such demands evidently There are also within the 6 Amendment to the Cosmetic Directive in Article 4a strict restrictions as to the further use of conventional animal testing for cosmetic products and their ingredients and especially for finished products Without doubt there is a competition between the necessity and expectations on consumer health on the one hand and the requirements of acknowledged protection of animals as done in Council Directive 86/609 EEC on the other But at least based on the present state of knowledge tests in human beings cannot replace animal testing in all instances Not only ethical reasons alone prohibit or impede testing in humans but also very often the lack of knowledge on functional and/or biological processes underlying observed effects with the consequence that suitable experimental methodologies are missing
