The Deep Self Profound Relaxation And The Tank Isolation Technique:

The Deep Self John Cunningham Lilly, 1977 **Torture and Democracy** Darius Rejali, 2009-06-08 This is the most comprehensive and most comprehensively chilling study of modern torture yet written Darius Rejali one of the world's leading experts on torture takes the reader from the late nineteenth century to the aftermath of Abu Ghraib from slavery and the electric chair to electro-torture in American inner cities and from French and British colonial prison cells and the Spanish American War to the fields of Vietnam the wars of the Middle East and the new democracies of Latin America and Europe As Rejali traces the development and application of one torture technique after another in these settings he reaches startling conclusions As the twentieth century progressed he argues democracies not only tortured but set the international pace for torture Dictatorships may have tortured more and more indiscriminately but the United States Britain and France pioneered and exported techniques that have become the lingua franca of modern torture methods that leave no marks Under the watchful eyes of reporters and human rights activists low level authorities in the world's oldest democracies were the first to learn that to scar a victim was to advertise iniquity and invite scandal Long before the CIA even existed police and soldiers turned instead to clean techniques such as torture by electricity ice water noise drugs and stress positions As democracy and human rights spread after World War II so too did these methods Rejali makes this troubling case in fluid arresting prose and on the basis of unprecedented research conducted in multiple languages and on several continents begun years before most of us had ever heard of Osama bin Laden or Abu Ghraib The author of a major study of Iranian torture Rejali also tackles the controversial question of whether torture really works answering the new apologists for torture point by point A brave and disturbing book this is the benchmark against which all future studies of modern torture will be measured **Clinical and Experimental Restricted Environmental Stimulation** Arreed F. Barabasz, Marianne Barabasz, 2012-12-06 A dozen years ago Peter Suedfeld introduced the world to the term REST to describe the modern technique or therapy involving Restricted Environmental Stimulation At the time REST was still equated with sensory deprivation Textbooks in psychology and psychiatry cited primarily the work of the 1950s and 60s which suggested that reduction of normal levels of stimulation was in a sense a form of torture producing severe psychological disturbances and subjugation of the hapless participant to the whims of an experimenter working in the service of a sinister government In contrast to this perception other psychologists and psychiatrists held the unsubstantiated belief that apparent REST effects were merely the result of awe inspiring experimental settings and subject expectancies Suedfeld was not persuaded by either of these unscientific positions He Suedfeld 1980 argued that REST when stripped of anxiety producing melodrama was simply a powerful way to positively alter a variety of psychological and behavioral processes Research continued More and more data were published and presented Research scientists and clinicians began to correct misconceptions The First International Conference on REST was held in 1983 and IRIS the International REST Investigators Society was founded that same year REST has outlived

misconstrued perceptions The beneficial effects of the technique are now recognized in the majority of scientific texts

Steingo,2024-04-09 In Interspecies Communication ethnomusicologist Gavin Steingo examines several significant cases of attempted communication beyond the human several cases that is where the dualistic relationship of human to non human is dramatically challenged Analyzing scenarios including a small coastal community in South Africa where humans call to whales a scientific laboratory in the Caribbean where humans tried to speak with dolphins and a case of black performance art involving human alien communication Steingo charts various mechanisms that humans have devised to think about and indeed to reach beings very unlike ourselves These speculative endeavors look and listen beyond what we are and what we know The book focuses on the second half of the twentieth century when Enlightenment conceptualizations of human and non human were increasingly materialized Following the Second World War scientists embarked upon the deep exploration of oceans and cosmic space two realms previously inaccessible to the senses and to empirical investigation As quintessential final frontiers the outer space of the cosmos and the inner space of oceans were conceptualized as structurally isomorphic twins subject to the same method of scrutiny Interspecies Communication examines the way that globally circulating ideas are taken up by a range of different subject positions including and especially peripheral subject positions in the global South

Wired For God? Charles Foster,2011-12-08 Human religious experiences are remarkably uniform many can be pharmacologically induced Recent research into the neurology of religious experience has shown that when worshipping or praying a certain part of the brain apparently dormant during other activities becomes active What does all this mean for those of faith and those with none In this fascinating book barrister Charles Foster takes a survey of the evidence from shamans to medieval mystics to out of body experiences and epilepsy via Jerusalem and middle class Christianity and assesses its significance Written in short accessible chapters this is a fascinating tour of religious and mystical experiences and their relation to human physiology **Altered Consciousness in the Twentieth Century** Jake Poller,2019-02-21 The

twentieth century saw an unprecedented spike in the study of altered states of consciousness New ASCs such as those associated with LSD and psilocybin mushrooms were cultivated and studied while older ASCs were given new classifications out of body experiences near death experiences psychokinesis extrasensory perception Altered Consciousness in the Twentieth Century analyses these different approaches and methodologies and includes exciting new research into neglected

areas This volume investigates the representation of ASCs in the culture of the twentieth century and examines the theoretical models that attempt to explain them The international contributors critically examine a variety of ASCs including precognition near death experiences telepathy New Age channelling contact with aliens and UFOs the use of alcohol and entheogens analysing both the impact of ASCs on the culture and how cultural and technological changes influenced ASCs The contributors are drawn from the fields of English and American literature religious studies Western esotericism film studies sociology and history of art and bring to bear on ASCs their own disciplinary and conceptual perspectives as well as a broader interdisciplinary knowledge of the subject The collection represents a vital contribution to the growing body of work on both ASCs and the wider academic engagement with millennialism entheogens occulture and the paranormal

The Transcendental Experience AA. VV.,2020-08-06 The Transcendental Experience that which evidences the continuity of the spirit beyond the physical death of the body has been the objective around which from historical times various mystical schools were organized Asceticism on the other hand is the particular path that each one of them developed as a proposal to achieve such experience Silo 1938 2010 who referred to himself as a writer and practitioner of what he called an inner religiosity promoted a proposal of simultaneous spiritual and social change to advance towards the formation of a Universal Human Nation In the field of spirituality he affirms that there is no meaning in life if everything ends with death dedicating his writing of *The Inner Look* 1989 to this theme and on the other hand in his *Psychology Notes* 2006 he explains the possibility of suspension and suppression of one's own I in order to make contact with another state or level of consciousness that he designates as The Profound He then suggests a first stage of leveling previous to the realization of one of four Disciplines that he developed mental energetic material and morphological as previous steps to an Asceticism that defines as a path of all life which tends to overcome the Self to enter the deep spaces of the Sacred The authors of this book compiled and ordered the conclusions of more than one hundred men and women from different countries who are part of the several thousands who have followed Silo's teachings and the methodology proposed here uses the advantages of relaxation and concentration that a Sensory Suppression Chamber has as well as the possibilities provided by the team work in order to accelerate the Asceticism

Restricted Environmental Stimulation Peter Suedfeld,John W. Jr. Turner,Thomas H. Fine,2012-12-06 Previously reported results of sensory deprivation experiences of which flotation REST is an instance were dramatic generally negative and ultimately unreliable This book offers controlled systematic research on the effects of flotation REST The papers in this collection were chosen from those presented at the first three international conferences on REST and fall into several categories The major category concerns theoretical formulations for REST effects other categories in the collection deal with experimental findings and clinical research in relation with flotation REST

The Architecture of Bathing Christie Pearson,2020-10-06 A celebration of communal bathing swimming pools saunas beaches ritual baths sweat lodges and more viewed through the lens of architecture and landscape We enter the public pool the sauna or the beach with a heightened awareness of our bodies and the bodies of others The phenomenology of bathing opens all of our senses toward the physical world entwined with the social while the history of bathing is one of shared space in both natural and built environments In The Architecture of Bathing Christie Pearson offers a unique examination of communal bathing and its history from the perspective of architecture and landscape Engagingly written and richly illustrated with more than 260 illustrations many in color The

Architecture of Bathing offers a celebration of spaces in which public and private sacred and profane ritual and habitual pure and impure nature and culture commingle Pearson takes a wide ranging view of her subject drawing on architecture art and literary works Each chapter is structured around an architectural typology and explores an accompanying theme for example tub sensuality river flow waterfall rejuvenation and banya immersion Offering examples introducing relevant theory and recounting personal experiences Pearson effortlessly combines a practitioner s zest with astonishing erudition As she examines these forms we see that they are inextricable from landscapes bodily practices and cultural production Looking more closely we experience architecture itself as an immersive material and social space embedded in the interdependent environmental and cultural fabric of our world In Defense of the Human Being Thomas Fuchs, 2021 With the progress of artificial intelligence the digitalization of the lifeworld and the reduction of the mind to neuronal processes the human being appears more and more as a product of data and algorithms The book applies cutting edge concepts of embodiment and enactivism to current scientific technological and cultural developments **Fractals of Brain, Fractals of Mind** Earl R. Mac Cormac, Maksim Stamenov, 1996 This collective volume is the first to discuss systematically what are the possibilities to model different aspects of brain and mind functioning with the formal means of fractal geometry and deterministic chaos At stake here is not an approximation to the way of actual performance but the possibility of brain and mind to implement nonlinear dynamic patterns in their functioning The contributions discuss the following topics among others the edge of chaos dynamics in recursively organized neural systems and in intersensory interaction the fractal timing of the neural functioning on different scales of brain networking aspects of fractal neurodynamics and quantum chaos in novel biophysics the fractal maximum power evolution of brain and mind the chaotic dynamics in the development of consciousness etc It is suggested that the margins of our capacity for phenomenal experience are fractal limit phenomena Here the possibilities to prove the plausibility of fractal modeling with appropriate experimentation and rational reconstruction are also discussed A conjecture is made that the brain vs mind differentiation becomes possible most probably only with the imposition of appropriate symmetry groups implementing a flowing interface of features of local vs global brain dynamics Series B

Well Beings James Riley, 2024-03-28 James Riley author of the cult hit *The Bad Trip* *Dark Omens* *New Worlds* and the *End of the Sixties* returns with another incisive and thought provoking cultural history turning his trenchant eye to the wellness industry that emerged in the 1970s Concepts such as wellness and self care may feel like distinctly twenty first century ideas but they first gained traction as part of the New Age health movements that began to flourish in the wake of the 1960s Riley dives into this strange and hypnotic world of panoramic coastal retreats and darkened floatation tanks blending a page turning narrative with illuminating explorations of the era s music film art and literature *Well Beings* delves deep into the mind of the seventies its popular culture its radical philosophies its approach to health and its sense of social crisis It tells the story of what was sought what was found and how these explorations helped the Me Decade find itself In so

doing it questions what good health means today and reveals what the seventies can teach us about the strange art of being well *The Cybernetic Brain* Andrew Pickering, 2010-04-15 Cybernetics is often thought of as a grim military or industrial science of control But as Andrew Pickering reveals in this beguiling book a much more lively and experimental strain of cybernetics can be traced from the 1940s to the present The Cybernetic Brain explores a largely forgotten group of British thinkers including Grey Walter Ross Ashby Gregory Bateson R D Laing Stafford Beer and Gordon Pask and their singular work in a dazzling array of fields Psychiatry engineering management politics music architecture education tantric yoga the Beats and the sixties counterculture all come into play as Pickering follows the history of cybernetics impact on the world from contemporary robotics and complexity theory to the Chilean economy under Salvador Allende What underpins this fascinating history Pickering contends is a shared but unconventional vision of the world as ultimately unknowable a place where genuine novelty is always emerging And thus Pickering avers the history of cybernetics provides us with an imaginative model of open ended experimentation in stark opposition to the modern urge to achieve domination over nature and each other
