Sir Jonas Moore Practical Mathematics And Restoration Science:

Sir Jonas Moore Frances Willmoth, 1993 Sir Jonas Moore 1617-79 practical mathematician teacher author surveyor cartographer Ordnance Officer courtier and patron of astronomy enjoyed a remarkable career by the standards of any age and was one of the first to make a substantial fortune from mathematical practice In the course of his rise as his friend John Aubrey termed it from humble origins in Lancashire to a knighthood membership of the Royal Society and favour at the court of Charles II he participated in the two most ambitious projects of the age the draining of the Great Level of the Fens under the Dutch engineer Sir Cornelius Vermuyden and the building of a massive harbour wall the Mole at Tangier In later life his wealth and influence as Surveyor General of the Ordnance enabled him to become a patron of the new Royal Observatory at Greenwich This biography the first detailed study of Moore examines his career in the context of changing views of mathematics especially in relation to 17th century disputes about the proper nature of the discipline and its effectiveness as means of solving practical problems It sheds light on the roles played by patrons and teachers of the subject most notably the figurehead of English mathematicians William Oughtred It also illuminates the confidence in practical mathematics that inspired Moore's unique activities as a patron and the uneasy relationship between this and the natural philosophical concerns of the early Royal Society This wide ranging study challenges the current conventionally narrow view of mathematics in the time of the 17th century scientific revolution [Brewing Science, Technology and Print, 1700-1880](#)

James Sumner, 2015-07-28 How did the brewing of beer become a scientific process Sumner explores this question by charting the theory and practice of the trade in Britain and Ireland during the eighteenth and nineteenth centuries *The Nature of the Book* Adrian Johns, 2009-05-15 In *The Nature of the Book* a tour de force of cultural history Adrian Johns constructs an entirely original and vivid picture of print culture and its many arenas commercial intellectual political and individual A compelling exposition of how authors printers booksellers and readers competed for power over the printed page The richness of Mr Johns's book lies in the splendid detail he has collected to describe the world of books in the first two centuries after the printing press arrived in England Alberto Manguel Washington Times A mammoth and stimulating account of the place of print in the history of knowledge Johns has written a tremendously learned primer D Graham Burnett New Republic A detailed engrossing and genuinely eye opening account of the formative stages of the print culture This is scholarship at its best Merle Rubin Christian Science Monitor The most lucid and persuasive account of the new kind of knowledge produced by print A work to rank alongside McLuhan John Sutherland The Independent Entertainingly written The most comprehensive account available well documented and engaging Ian Maclean Times Literary Supplement

Beyond the Learned Academy Philip Beeley, Christopher Hollings, 2024 Comprising fifteen essays by leading authorities in the history of mathematics this volume aims to exemplify the richness diversity and breadth of mathematical practice from the seventeenth century through to the middle of the nineteenth century **Jesuit Science and the End of**

Nature's Secrets Mark A. Waddell, 2016-03-09 Jesuit Science and the End of Nature's Secrets explores how several prominent Jesuit naturalists including Niccolò Cabeo, Athanasius Kircher and Gaspar Schott tackled the problem of occult or insensible causation in the seventeenth century. The search for hidden causes lay at the heart of the early modern study of nature and included phenomena such as the activity of the magnet, the marvelous powers ascribed to certain animals and plants, and the hidden destructive forces churning in the depths of the Earth. While this was a project embraced by most early modern naturalists, however, the book demonstrates that the Jesuits were uniquely suited to the study of nature's hidden secrets because of the complex methods of contemplation and meditation enshrined at the core of their spirituality. Divided into six chapters, the work documents how particular Jesuits sought to reveal and expose nature's myriad secrets through an innovative blending of technology, imagery and experiment. Moving beyond the conventional Aristotelianism mandated by the Society of Jesus, they set forth a vision of the world that made manifest the works of God as Creator, no matter how deeply hidden those works were. The book thus not only presents a narrative that challenges present-day assumptions about the role played by Catholic religious communities in the formation of modern science, but also captures the exuberance and inventiveness of the early modern study of nature. *John Pell (1611-1685) and His Correspondence with Sir Charles Cavendish* Noel Malcolm, Charles Cavendish, John Pell, Jacqueline Stedall, 2005 Publisher description [The Body of the Artisan](#) Pamela H. Smith, 2024-05-31 Since the time of Aristotle, the making of knowledge and the making of objects have generally been considered separate enterprises. Yet during the late sixteenth and early seventeenth centuries, the two became linked through a new philosophy known as science. In *The Body of the Artisan*, Pamela H. Smith demonstrates how much early modern science owed to an unlikely source: artists and artisans. From goldsmiths to locksmiths and from carpenters to painters, artists and artisans were much sought after by the new scientists for their intimate hands-on knowledge of natural materials and the ability to manipulate them. Drawing on a fascinating array of new evidence from northern Europe, including artisans' objects and their writings, Smith shows how artisans saw all knowledge as rooted in matter and nature. With nearly two hundred images, *The Body of the Artisan* provides astonishingly vivid examples of this Renaissance synergy among art, craft and science, and recovers a forgotten episode of the Scientific Revolution, an episode that forever altered the way we see the natural world. **Ancient Wisdom in the Age of the New Science** Dmitri Levitin, 2015-09-15 A groundbreaking revisionist account of the importance of the history of philosophy to intellectual change, scientific, philosophical and religious in seventeenth-century England. [A History of Science in the Netherlands](#) Klaas van Berkel, Albert van Helden, L.C. Palm, 2023-07-03 In the 400 years of its modern history, the Netherlands has produced a distinguished array of eminent mathematicians, scientists and medical researchers, including many Nobel prize winners and other internationally recognised figures, from Stevin, Snell and Huygens in the 17th century to Lorentz, Kammerlingh Onnes, Buys Ballot, De Vries, de Sitter and Oort in the 19th and 20th centuries. Yet it has often been noted that the history of science in the Netherlands is

underepresented in the international literature The handbook A History of Science in The Netherlands aims to correct this situation by providing a chronological and thematic survey of the field from the 16th century to the present essays on selected aspects of science in the Netherlands and reference biographies of about 65 important Dutch scientists Written by more than 10 experts from Europe and North America the handbook is the standard English language reference work for the field

The Power of Knowledge Jeremy Black, 2014-01-14 Information is power For more than five hundred years the success or failure of nations has been determined by a country's ability to acquire knowledge and technical skill and transform them into strength and prosperity Leading historian Jeremy Black approaches global history from a distinctive perspective focusing on the relationship between information and society and demonstrating how the understanding and use of information have been the primary factors in the development and character of the modern age Black suggests that the West's ascension was a direct result of its institutions and social practices for acquiring employing and retaining information and the technology that was ultimately produced His cogent and well reasoned analysis looks at cartography and the hardware of communication armaments and sea power mercantilism and imperialism science and astronomy as well as bureaucracy and the management of information linking the history of technology with the history of global power while providing important indicators for the future of our world
