Huang, K.L. Mak, 2012-12-06 In recent years the importance of Internet and World Wide Web WWW technologies in manufacturing industries has been rising very rapidly in a global context the impact of which is deemed most profound ever since the Industrial Revolution The waning interests in the electronic commerce and electronic business e commerce e business have spread from the heartland product development to the battlefield shop floor of manufacturing enterprises The number of web applications is ever on the rise and many

practitioners are keen on trying these remote systems through web browsers to support their decision making activities. Indeed product design and manufacture professionals will soon be able to benefit from such remote services and supports commercially available on the Internet. The practice and performance of product development and realization are expected to make immense progress. Web applications in product design and manufacture signals the beginning of a new era of the digital manufacturing enterprise. However many loopholes are found in the development and application processes because of domain complexity and technology sophistication thus generating new challenges to both the developers and practitioners. A simple example is the difference in the user interfaces between web applications and traditional applications. Indeed abundant issues need to be resolved before the full launch of digital manufacturing can come into being.

Innovative Applications of Educational Technology Tools in Teaching and Learning Blessing Foluso Adeoye Ph.D., 2015-10-07 In this digital age technology has become a very vital factor of development in all disciplines. Every day new software devices and other technologies are being developed to improve lives in one way or another. Technology in its broadest terms could include the collection of tools, machinery, devices, modifications, arrangements and procedures used by humans. However in the context of Educational Technology as presented in this book it is understood as technologies that have arrived with the Information Revolution i.e. those associated with computers and Information Communication Technology. Examples of such technologies are electronics devices, computer video collaborative writing tools, social networking and the Internet. Innovative applications of technology in the classroom mean more than teaching basic computer skills and software programs in the class. It must happen across the disciplines and curriculum in ways that teaching and learning processes can be enhanced. It must also support active engagement, group participation, local and global collaboration and interaction. This book presents innovative applications of educational technology tools in teaching and learning across various disciplines.
