ABSTRACT

This study of "successful" teachers' microcomputer-based mathematics and science instruction had three objectives: (1) to describe how teachers who were nominated by their peers as "successful" microcomputer-using teachers use the technology for instruction; (2) to describe how these uses vary as a function of teacher characteristics and district, school, and classroom contexts; and (3) to make recommendations based on these teachers' suggestions for educating teachers in the instructional uses of microcomputers and for developing courseware that serves teachers' pedagogical aims. Sections in the report after the introduction include: theoretical framework, method, patterns of microcomputer-based instruction, teachers' attitudes and knowledge and teaching contexts, staff development for microcomputer-based instruction, characteristics of teacher-friendly courseware, and conclusions and recommendations. A bibliography is included. (MNS)
