Jakobsson,2012-08-21 Mobile Authentication Problems and Solutions looks at human to machine authentication with a keen focus on the mobile scenario Human to machine authentication is a startlingly complex issue In the old days of computer security before 2000 the human component was all but disregarded It was either assumed that people should and would be able to follow instructions or that end users were hopeless and would always make mistakes The truth of course is somewhere in between which is exactly what makes this topic so enticing We cannot make progress with human to machine authentication without understanding both humans and machines Mobile security is not simply security ported to a handset Handsets have different constraints than traditional computers and are used in a different way Text entry is more frustrating and therefore it is tempting to use shorter and less complex passwords It is also harder to detect spoofing We need to design with this in mind We also need to determine how exactly to integrate biometric readers to reap the maximum benefits from them This book addresses all of these issues and more *Teaching Communication* Anita L.
