**Psychoanalytic Theory and Clinical Relevance** Louis S. Berger, 2019-01-04 In this provocative contribution to both psychoanalytic theory and the philosophy of science Louis Berger grapples with the nature of consequential theorizing i e theorizing that is relevant to what transpires in clinical practice By examining analysis as a genre of state process formalism the standard format of scientific theories Berger demonstrates why contemporary theorizing inevitably fails to explain crucial aspects of practice His critique in this respect pertains both to the formal structure of psychoanalytic explanation and the technical language through which this structure gains expression The pragmatic recommendations that issue from this critique are illustrated with respect to a number of perennial problem areas besetting analysis and cognate disciplines In a discussion that encompasses theories of affect issues in family therapy the nature of first language acquisition and the philosophical topics of free will and determinism Berger shows that certain systems of representation including ordinary language can describe the psychological realm adequately and that such systems necessarily follow modern physics in rejecting naive assumptions about the separability of theory and practice His proposals culminate in a nonhierarchical conception of psychoanalytic theory that assigns a separate status to the clinically pragmatic level of theorizing In both his critique of contemporary analysis and his reconstructive proposals Berger fuses into a highly readable argument a fascinating range of insights culled from epistemology linguistics physics

logic computer science history and aesthetics More impressively still he demonstrates how an investigation of psychoanalytic theory can serve as a vehicle for examining pervasive epistemological issues in both philosophy and the social sciences

*Systems Science and Cybernetics - Volume II* Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic

conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence
