Bibliometrics and Citation Analysis From the Science Citation Index to Cybermetrics offers a comprehensive overview of theories techniques concepts and applications in the interdisciplinary and steadily growing field of bibliometrics This book looks at bibliographic citation and citation networks by discussing the past present and future of bibliometrics from its foundations in the Science Citation Index to its expansion into the World Wide Web It is useful to those in every area of scholarship involved in the quantitative analysis of information exchanges but also to general readers who simply wish to familiarize themselves with an important area of information science *Integrated Soft Computing* Dr. Jagadeesh

Kumar, Badal Arya, 2025-05-07 Soft computing is a kind of computing technology that we use to develop intelligent machines These machines have human like problem solving capabilities Later they offer imprecise but useful solutions for problems that are complex and even computational The technologies used in soft computing to address such complex problems include fuzzy logic neural network genetic algorithms and support vector machines Each of these techniques contributes in a unique way while addressing the problem Soft computing conducts the entire process in a cooperative way Integrated Soft

Computing techniques are complementary to each other instead of being competitive while solving the problem This book offers the advantages in partnership with integrating soft computing to allow solutions for the problems that are otherwise unsolvable **Classical Theorists in the Social Sciences** Dejo Abdulrahman, 2023-05-05 This book is a useful companion

to every social science student who desires an understanding of classical theoretical developments in and evolution of the disciplines **A Social Epistemology of Research Groups** Susann Wagenknecht, 2016-12-04 This book investigates how collaborative scientific practice yields scientific knowledge At a time when most of today s scientific knowledge is created in research groups the author reconsiders the social character of science to address the question of whether collaboratively created knowledge should be considered as collective achievement and if so in which sense Combining philosophical analysis with qualitative empirical inquiry this book provides a comparative case study of mono and interdisciplinary research groups offering insight into the day to day practice of scientists The book includes field observations and interviews with scientists to

present an empirically grounded perspective on much debated questions concerning research groups division of labor relations of epistemic dependence and trust

Scholarship in the Digital Age Christine L. Borgman, 2010-08-13 An exploration of the technical social legal and economic aspects of the scholarly infrastructure needed to support research activities in all fields in the twenty first century Scholars in all fields now have access to an unprecedented wealth of online information tools and services The Internet lies at the core of an information infrastructure for distributed data intensive and collaborative research Although much attention has been paid to the new technologies making this possible from digitized books to sensor networks it is the underlying social and policy changes that will have the most lasting effect on the scholarly enterprise In *Scholarship in the Digital Age* Christine Borgman explores the technical social legal and economic aspects of the kind of infrastructure that we should be building for scholarly research in the twenty first century Borgman describes the roles that information technology plays at every stage in the life cycle of a research project and contrasts these new capabilities with the relatively stable system of scholarly communication which remains based on publishing in journals books and conference proceedings No framework for the impending data deluge exists comparable to that for publishing

Analyzing scholarly practices in the sciences social sciences and humanities Borgman compares each discipline s approach to infrastructure issues In the process she challenges the many stakeholders in the scholarly infrastructure scholars publishers libraries funding agencies and others to look beyond their own domains to address the interaction of technical legal economic social political and disciplinary concerns *Scholarship in the Digital Age* will provoke a stimulating conversation among all who depend on a rich and robust scholarly environment

Big Data, Little Data, No Data Christine L. Borgman, 2017-02-03 An examination of the uses of data within a changing knowledge infrastructure offering analysis and case studies from the sciences social sciences and humanities *Big Data* is on the covers of *Science* *Nature* the *Economist* and *Wired* magazines on the front pages of the *Wall Street Journal* and the *New York Times* But despite the media hyperbole as Christine Borgman points out in this examination of data and scholarly research having the right data is usually better than having more data little data can be just as valuable as big data In many cases there are no data because relevant data don t exist cannot be found or are not available Moreover data sharing is difficult incentives to do so are minimal and data practices vary widely across disciplines Borgman an often cited authority on scholarly communication argues that data have no value or meaning in isolation they exist within a knowledge infrastructure an ecology of people practices technologies institutions material objects and relationships After laying out the premises of her investigation six provocations meant to inspire discussion about the uses of data in scholarship Borgman offers case studies of data practices in the sciences the social sciences and the humanities and then considers the implications of her findings for scholarly practice and research policy To manage and exploit data over the long term Borgman argues requires massive investment in knowledge infrastructures at stake is the future of scholarship

Indirect Reports and Pragmatics Alessandro Capone, Ferenc Kiefer, Franco Lo Piparo, 2015-12-01

This volume offers the reader a singular overview of current thinking on indirect reports. The contributors are eminent researchers from the fields of philosophy of language, theoretical linguistics and communication theory who answer questions on this important issue. This exciting area of controversy has until now mostly been treated from the viewpoint of philosophy. This volume adds the views from semantics, conversation analysis and sociolinguistics. Authors address matters such as the issue of semantic minimalism vs radical contextualism, the attribution of responsibility for the modes of presentation associated with Noun Phrases and how to distinguish the indirect reporter's responsibility from the original speaker's responsibility. They also explore the connection between indirect reporting and direct quoting. Clearly indirect reporting has some bearing on the semantics/pragmatics debate, however there is much controversy on what is said, whether this is a minimal semantic logical form enriched by saturating pronominals or a much richer and fully contextualized logical form. This issue will be discussed from several angles. Many of the authors are contextualists and the discussion brings out the need to take context into account when one deals with indirect reports, both the context of the original utterance and the context of the report. It is interesting to see how rich cues and clues can radically transform the reported message, assigning illocutionary force and how they can be mobilized to distinguish several voices in the utterance. Decoupling the voice of the reporting speaker from that of the reported speaker on the basis of rich contextual clues is an important issue that pragmatic theory has to tackle. Articles on the issue of slurs will bring new light to the issue of decoupling responsibility in indirect reporting while others are theoretically oriented and deal with deep problems in philosophy and epistemology.

Understanding Social Research Networking Sites Jens-Henrik Soeldner, 2020-08-31 Research collaboration is a critical enabler for scientific knowledge production and innovation but poses significant challenges, particularly if it is carried out in a distributed and geographically dispersed fashion. Jens Henrik Soeldner investigates how social research networking sites can help make scientific collaboration in management research more productive and successful. The author builds on a comprehensive literature review and two empirical studies to elucidate how social research networking sites can be leveraged for various research-related tasks.
