The Order Of Man A Biomathematical Anatomy Of The Primates:

The Order of Man Charles E. Oxnard, 1984 This book is an attempt to look broadly at the biological Order of Man It reviews more than two decades of study of present day primates using data and methods not hitherto made available in one place nor to the general reader

The Scientific Bases of Human Anatomy Charles Oxnard, 2015-05-28 As medical schools struggle to fit ever more material into a fixed amount of time students need to approach the study of anatomy through a succinct integrative overview Rather than setting forth an overwhelming list of facts to be memorized this book engages readers with a fascinating account of the connections between human anatomy and a wide array of scientific disciplines weaving in the latest advances in developmental and evolutionary biology comparative morphology and biological engineering Logically organized around a few key concepts *The Scientific Bases of Human Anatomy* presents them in clear memorable prose concise tabular material and a host of striking photographs and original diagrams

Shaping Primate Evolution Fred Anapol, Rebecca Z. German, Nina G. Jablonski, 2004-05-20 *Shaping Primate Evolution* is an edited collection of papers about how biological form is described in primate biology and the consequences of form for function and behavior The contributors are highly regarded internationally recognized scholars in the field of quantitative primate evolutionary morphology Each chapter elaborates upon the analysis of the form function behavior triad in a unique and compelling way This book is distinctive not only in the diversity of the topics discussed but also in the range of levels of biological organization that are addressed from cellular morphometrics to the evolution of primate ecology The book is dedicated to Charles E Oxnard whose influential pioneering work on innovative metric and analytic techniques has gone hand in hand with meticulous comparative functional analyses of primate anatomy Through the marriage of theory with analytical applications this volume will be an important reference work for all those interested in primate functional morphology

Fourier Descriptors and Their Applications in Biology Pete E. Lestrel, 1997-05-13 This book discusses the theory and the practice of using Fourier descriptors as a method for measuring the shape of whole or parts of organisms

National Library of Medicine Current Catalog National Library of Medicine (U.S.), *The Statistical Theory of Shape* Christopher G. Small, 2012-12-06 In general terms the shape of an object data set or image can be defined as the total of all information that is invariant under translations rotations and isotropic rescalings Thus two objects can be said to have the same shape if they are similar in the sense of Euclidean geometry For example all equilateral triangles have the same shape and so do all cubes In applications bodies rarely have exactly the same shape within measurement error In such cases the variation in shape can often be the subject of statistical analysis The last decade has seen a considerable growth in interest in the statistical theory of shape This has been the result of a synthesis of a number of different areas and a recognition that there is considerable common ground among these areas in their study of shape variation Despite this synthesis of disciplines there are several different schools of statistical shape analysis One of these the Kendall school of shape analysis uses a variety of

mathematical tools from differential geometry and probability and is the subject of this book The book does not assume a particularly strong background by the reader in these subjects and so a brief introduction is provided to each of these topics Anyone who is unfamiliar with this material is advised to consult a more complete reference As the literature on these subjects is vast the introductory sections can be used as a brief guide to the literature

Ghostly Muscles, Wrinkled Brains, Heresies and Hobbits Charles E. Oxnard, 2008 The Leverhulme Trust UK required Charles Oxnard to present a series of public lectures during his tenure of a Leverhulme Professorship at University College London The lectures had to be understandable not only to undergraduate and graduate students and colleagues but also to the interested lay public Furthermore they were expected to meet and venture beyond present day thought in the subject This near impossible task is reproduced in this unique volume Each chapter shows what is rarely if ever done in scientific papers how the problems truly arose how the methods came about the curious collaborators involved the twists and turns of thought involved in the stories the solutions that have so far appeared and the surprising new ideas that stem from the work In particular the part played by serendipity becomes ever more evident Research is very often a kind of Alice in Wonderland task and both students and the public alike are fascinated by the inside stories of how discoveries are really made It is precisely this excitement and complexity that is presented in this book

The Universal Pattern Within History Rachamim Dayan, 2002-09-23 This book is a work of synthesis which argues that an all encompassing blueprint governs the evolution of all parts of our universe In its first half it discerns interdisciplinary symmetry in the early development of history and six other disciplines It then uses this discovery to formulate testable predictions about the form and content of later history In its second half the book attempts to verify these intimations of our more recent past and to envision the human future that lies ahead

The Speciation of Modern Homo Sapiens T. J. Crow, 2004-01-08 This is the first volume to address directly the question of the speciation of modern Homo sapiens The subject raises profound questions about the nature of the species our defining characteristic it is suggested it is language and the brain changes and their genetic basis that make us distinct The British Academy and the Academy of Medical Sciences have brought together experts from palaeontology archaeology linguistics

psychology genetics and evolutionary theory to present evidence and theories at the cutting edge of our understanding of these issues Palaeontological and genetic work suggests that the transition from a precursor hominid species to modern man took place between 100 000 and 150 000 years ago Some contributors discuss what is most characteristic of the species focussing on language and its possible basis in brain lateralization This work is placed in the context of speciation theory which has remained a subject of considerable debate since the evolutionary synthesis of Mendelian genetics and Darwinian theory The timing of specific transitions in hominid evolution is discussed as also is the question of the neural basis of language Other contributors address the possible genetic nature of the transition with reference to changes on the X and Y chromosomes that may account for sex differences in lateralization and verbal ability These differences are discussed in terms of the theory of sexual selection and with reference to the mechanisms of speciation These essays will be vital reading for anyone interested in the nature and origins of the species and specifically human abilities *Human, Apes and Chinese Fossils* Charles E. Oxnard, 1985-09-01 *Human Apes and Chinese Fossils* New Implications for Human Evolution The series will cover all disciplines concomitant to full University studies

Cutting And Counting, Through Mathematics, Mechanics, Molecules And Modelling, To Brain And Behaviour!

Charles Oxnard,2023-05-22 Regarded by many as a dead or simply dull subject Change and Challenge in Human Structure Sixty Years On shatters this prejudice with a series of studies that go beyond dissection and measurement and covers novel approaches to anatomical form Award winning anatomist Charles Oxnard takes us on an exhilarating ride beginning with rudimentary dissections and the fascinating observation of missing muscles we are led on naturally to statistical analysis of bone measurements and how they may give information about bone function Engineering methods and pattern recognition are introduced next as a means of studying the external shape and internal structure of bones respectively and their relation to mechanical function The application of landmark analysis to anatomy also known as geometric morphometrics is given a full chapter treatment Finally Oxnard uses modelling techniques to skilfully lay out an argument for the uniqueness of human brains and new possibilities in human evolutionary theories both past and future This book offers nothing less than a paradigm shift in our understanding of one of the oldest fields of science and leads us into new views of the functional developmental behavioural genetic and evolutionary implications of anatomical studies *Human Adaptability: Future*

Trends And Lessons From The Past, Perspective In Human Biology, Vol 3 Charles Oxnard,Leonard Freedman,1998-01-22 This volume takes its subtitle from the theme of the ASHB meeting for 1996 Human Adaptability Future Trends and Lessons from the Past The first paper is the annual conference lecture Human Evolution Today Which Way Next delivered by Professor Maciej Hennenberg the newly appointed Wood Jones Professor at the University of Adelaide This is followed by the

transcripts of two papers resulting from a debate on Species and Human Evolution also from the meeting The first is Species Concept in Palaeoanthropology by Colin Groves and the second The Problem of Species in Hominid Evolution by Maciej Hennenberg There are also a series of individual papers Two of these are shorter integrative pieces Philosophical Problems in Palaeoanthropology by Darren Curnoe and A Biological Basis for Generative Learning in Science by Lynette Schavieren and Mark Cosgrove These are followed in turn by two proffered papers on specific problems Patterns of Morphological Discrimination in the Human Talus a Consideration of the Case for Negative Function by Robert Kidd and Charles Oxnard and The Specific Status of a new Siwalik Sivapithecine Specimen by David Cameron Rajeev Patnaik and Michelle Stevens The final contribution is one of the longer integrative papers which has characterised each of the prior volumes The Interface of Function Genes Development and Evolution Insights from Primate Morphometrics by Charles Oxnard
