Introduction to Surface Chemistry and Catalysis Gabor A. Somorjai, Yimin Li, 2010-06-08 Now updated the current state of development of modern surface science Since the publication of the first edition of this book molecular surface chemistry and catalysis science have developed rapidly and expanded into fields where atomic scale and molecular information were previously not available This revised edition of Introduction to Surface Chemistry and Catalysis reflects this increase of information in virtually every chapter It emphasizes the modern concepts of surface chemistry and catalysis uncovered by breakthroughs in molecular level studies of surfaces over the past three decades while serving as a reference source for data and concepts related to properties of surfaces and interfaces The book opens with a brief history of the evolution of surface chemistry and reviews the nature of various surfaces and interfaces encountered in everyday life New research in two crucial areas nanomaterials and polymer and biopolymer interfaces is emphasized while important applications in tribology and catalysis producing chemicals and fuels with high turnover and selectivity are addressed The basic concepts surrounding various properties of surfaces such as structure thermodynamics dynamics electrical properties and surface chemical bonds are presented The techniques of atomic and molecular scale studies of surfaces are listed with references to up to date review papers For advanced readers this book covers recent developments in in situ surface analysis such as high pressure scanning tunneling microscopy ambient pressure X ray photoelectron spectroscopy and sum frequency generation vibrational spectroscopy SFG Tables listing surface structures and data summarizing the kinetics of catalytic reactions over metal surfaces are also included New to this edition A discussion of new physical and chemical properties of nanoparticles Ways to utilize new surface science techniques to study properties of polymers reaction intermediates and

mobility of atoms and molecules at surfaces Molecular level studies on the origin of the selectivity for several catalytic reactions A microscopic understanding of mechanical properties of surfaces Updated tables of experimental data A new chapter on soft surfaces polymers and biointerfaces Introduction to Surface Chemistry and Catalysis serves as a textbook for undergraduate and graduate students taking advanced courses in physics chemistry engineering and materials science as well as researchers in surface science catalysis science and their applications Properties of Narrow Gap Cadmium-based Compounds Peter Capper,1994 This highly structured volume contains sections on growth and device aspects of mercury cadmium telluride MCT

Phase Transitions and Adsorbate Restructuring at Metal Surface D.A. King,D.P. Woodruff,2012-12-02 The objective in initiating this series in 1980 was to provide an in depth review of advances made in the understanding key aspects of surface chemistry and physics through the application of new techniques to the study of well defined surfaces Since then the field of surface science has greatly matured and further important techniques particularly scanning probe microscopies have been successfully assimilated into the applications armoury of the surface scientist The present volume is a series of timely reviews by many of the current experts in the field of phase transitions and adsorbate induced surface restructuring No aspect of the science of solid surfaces can be fully understood without accounting for the structural diversity of surfaces now revealed in atomic detail by techniques based on diffraction and scanning probe microscopies For example it is now clear to those working in heterogeneous catalysis that adsorbate induced restructuring of surfaces can play a critical role in phenomena such as bistability kinetic oscillations and promotion and poisoning Structural transitions at surfaces can also play a key role in determining the electronic properties of surfaces reviewed in volume 5

Dynamics at Solid State Surfaces and Interfaces, Volume 2 Uwe Bovensiepen,Hrvoje Petek,Martin Wolf,2012-04-16 This two volume work covers ultrafast structural and electronic dynamics of elementary processes at solid surfaces and interfaces presenting the current status of photoinduced processes Providing valuable introductory information for newcomers to this booming field of research it investigates concepts and experiments femtosecond and attosecond time resolved methods as well as frequency domain techniques The whole is rounded off by a look at future developments
