Teaching and Learning Algebraic Thinking with 5- to 12-Year-Olds

Carolyn Kieran, 2017-12-04 This book highlights new developments in the teaching and learning of algebraic thinking with 5 to 12 year olds Based on empirical findings gathered in several countries on five continents it provides a wealth of best practices for teaching early algebra Building on the work of the ICME 13 International Congress on Mathematical Education Topic Study Group 10 on Early Algebra well known authors such as Luis Radford John Mason Maria Blanton Deborah Schifter and Max Stephens as well as younger scholars from Asia Europe South Africa the Americas Australia and New Zealand present novel theoretical perspectives and their latest findings The book is divided into three parts that focus on i epistemological mathematical aspects of algebraic thinking ii learning and iii teaching and teacher development Some of the main threads running through the book are the various ways in which structures can express themselves in children s developing algebraic thinking the roles of generalization and natural language and the emergence of symbolism Presenting vital new data from international contexts the book provides additional support for the position that essential ways of thinking algebraically need to be intentionally fostered in instruction from the earliest grades

Teaching and Learning Algebra Doug French, 2002-12-31 Algebra is widely recognized as a difficult aspect of the Mathematics curriculum one that not all pupils see the point of Yet an understanding of algebra provides the key to the great power and potential interest of Mathematics in general Up to now detailed advice and guidance on the teaching and learning of algebra has been difficult to find Here however Doug French provides a comprehensive authoritative and above all constructive guide to the subject

Teaching and Learning Algebra Heidi Strømskag Måsøval, Yves Chevallard, 2016-05-04 The book is based on a longitudinal study of beginning teachers struggles with algebra with strong foundation in the theory of didactical situations Brousseau 1997 The focus is on factors that constrain students engagement with algebraic generality in shape patterns Participants in the study are six student teachers and two teacher educators of mathematics The empirical material consists

of videotaped classroom observations and the mathematical tasks with which the students engaged Three analytic categories emerged from an open coding process which show that the students algebraic generalization is constrained by 1 a limited feedback potential in situations where the students are supposed to solve the mathematical tasks without teacher intervention 2 obstacles the students face when they shall transform into algebraic notation formulae they have expressed informally in natural language and 3 challenges with justification of formulae and mathematical statements that the students have proposed This book provides many practical and concrete examples to guide mathematics education researchers mathematics teacher educators and mathematics educators in teaching algebra in a variety of contexts and environments

Tasks and Competencies in the Teaching and Learning of Algebra Alex Friedlander, Abraham Arcavi, 2018-02-28 *Tasks and Competencies in the Teaching and Learning of Algebra* provides a conceptual approach that will encourage students learning algebra to employ a variety of thinking processes and strategies and most importantly will enable them to truly understand the concepts that underlie the problems they are solving The authors framework develops those skills and competencies aligned with the goals of the Common Core State Standards that are necessary for an integrated conceptual learning of algebra The book s four chapters include tasks focusing on algebraic expressions equations and functions followed by tasks that integrate several mathematical concepts Each of the 48 tasks in this book contains a classroom ready task with items arranged by increasing order of complexity a discussion of the task s main ideas and objectives solutions for each item in the task with suggestions of various methods that students might use and a listing of the essential competencies that students can develop by working on the task All 48 tasks are also available at NCTM s More4U website as downloadable and printable worksheets to hand out to students With its strong conceptual framework *Tasks and Competencies in the Teaching and Learning of Algebra* is designed to enable teachers teacher educators and curriculum designers to help students at all levels master the ideas and practices found in algebra and to develop skills they can use throughout their mathematics education

This survey of the state of the art on research in early algebra traces the evolution of a relatively new field of research and teaching practice With its focus on the younger student aged from about 6 years up to 12 years this volume reveals the nature of the research that has been carried out in early algebra and how it has shaped the growth of the field The survey in presenting examples drawn from the steadily growing research base highlights both the nature of algebraic thinking and the ways in which this thinking is being developed in the primary and early middle school student Mathematical relations patterns and arithmetical structures lie at the heart of early algebraic activity with processes such as noticing conjecturing generalizing representing justifying and communicating being central to students engagement **Future Curricular**

The book reports a comparative research project about algebra teaching and learning in four countries Algebra is a central topic of learning across the world and it is well known that it represents a hurdle for many students The book presents analyses built on extensive video recordings of classrooms documenting the first introduction to symbolic algebra students aged 12 to 14 While the content addressed in all classrooms is variables expressions and equations the teaching approaches are diverse The chapters bring the reader into different algebra classrooms discussing issues such as mathematization and social norms the role of mediating tools and designed examples and teacher beliefs By comparing classrooms new insights are generated about how students understand the algebraic content how teachers instruct and how both parties deal with difficulties in learning elementary algebra The book also describes a research methodology using video in search of taken for granted aspects of algebra lessons Challenges and Strategies in Teaching Linear Algebra Sepideh

Teaching to the Math Common Core State Standards

F. D. Rivera,2015-06-17 This is a methods book for preservice middle level majors and beginning middle school teachers It takes a very practical approach to learning to teach middle school mathematics in an emerging Age of the Common Core State Standards The Common Core State Standards in Mathematics CCSSM is not meant to be the official mathematics curriculum it was purposefully developed primarily to provide clear learning expectations of mathematics content that are appropriate at every grade level and to help prepare all students to be ready for college and the workplace A quick glance at the Table of Contents in this book indicates a serious engagement with the recommended mathematics underlying the Grade 5 through Grade 8 and traditional pathway Algebra I portions of the CCSSM first with issues in content practice assessment learning teaching and classroom management pursued next and in that order In this book we explore what it means to teach to the CCSSM within an alignment mindset involving content practice learning teaching and assessment The Common Core state content standards which pertain to mathematical knowledge skills and applications have been carefully crafted so that they are teachable learnable coherent fewer clearer and higher The practice standards which refer to institutionally valued mathematical actions processes and habits have been conceptualized in ways that will hopefully encourage all middle school students to engage with the content standards more deeply than merely acquiring mathematical knowledge by rote and imitation Thus in the CCSSM proficiency in content alone is not sufficient and so does practice without content which is limited Content and practice are both equally important and thus must come together in teaching learning and assessment in order to support authentic mathematical understanding This blended multisourced text is a getting smart book It prepares preservice middle level majors and beginning middle school teachers to work within the realities of accountable pedagogy and to develop a proactive disposition that is capable of supporting all middle school students in order for them to experience growth in mathematical understanding that is necessary for high school and beyond including future careers
