The Teaching of Mathematics in Secondary Schools Arthur Schultze, 2015-06-14 Excerpt from *The Teaching of Mathematics in Secondary Schools* Since 1906 the author has delivered a yearly course of lectures at New York University on the Teaching of Mathematics in Secondary Schools These lectures consisted largely of a concrete discussion of the problems that arise in actual teaching This book was planned on similar lines but the pressure of professional duties coupled with ill health made it impossible to carry out this concrete treatment of the subject through the entire extent of secondary school work The author hopes however that all important and fundamental topics have been treated in such detail as to be of real assistance to the inexperienced teacher to whom the generalities of abstract pedagogy are not only useless but often meaningless The chief object of this book is to contribute towards making mathematical teaching less informational and more disciplinary Most teachers admit that mathematical instruction derives its importance from the mental training that it affords and not from the information that it imparts But in spite of these

theoretical views a great deal of mathematical teaching is still informational Students still learn demonstrations instead of learning how to demonstrate About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Teaching Mathematical Reasoning in Secondary School Classrooms Karin Brodie, 2009-10-08 For too many students mathematics consists of facts in a vacuum to be memorized because the instructor says so and to be forgotten when the course of study is completed In this all too common scenario young learners often miss the chance to develop skills specifically reasoning skills that can serve them for a lifetime The elegant pages of Teaching Mathematical Reasoning in Secondary School Classrooms propose a more positive solution by presenting a reasoning and discussion based approach to teaching mathematics emphasizing the connections between ideas or why math works The teachers whose work forms the basis of the book create a powerful record of methods interactions and decisions including dealing with challenges and impasses involving this elusive topic And because this approach shifts the locus of authority from the instructor to mathematics itself students gain a system of knowledge that they can apply not only to discrete tasks relating to numbers but also to the larger world of people and the humanities A sampling of the topics covered Whole class discussion methods for teaching mathematics reasoning Learning mathematical reasoning through tasks Teaching mathematics using the five strands Classroom strategies for promoting mathematical reasoning Maximizing student contributions in the classroom Overcoming student resistance to mathematical conversations Teaching Mathematical Reasoning in Secondary School Classrooms makes a wealth of cutting edge strategies available to mathematics teachers and teacher educators This book is an invaluable resource for researchers in mathematics and curriculum reform and of great
