Tears Of The Cheetah The Genetic Secrets Of Our Animal Ancestors:

Tears of the Cheetah Stephen J. O'Brien, 2003-09-25 In this collection of genetic detective stories the author reveals how feline immunodeficiency virus FIV has uncovered clues to a potential cure for HIV and other important animal research that has paved the way toward the future of gene therapy Tears of the Cheetah, 2003 **Tears of the Cheetah** Stephen J. O'Brien, 2015-10-27 The history of life on Earth is dominated by extinction events so numerous that over 99.9% of the species ever to have existed are gone forever. If animals could talk we would ask them to recall their own ancestries in particular the secrets as to how they avoided almost inevitable annihilation in the face of daily assaults by predators, climatic cataclysms, deadly infections and innate diseases. In *Tears of the Cheetah*, medical geneticist and conservationist Stephen J. O'Brien narrates fast-moving science adventure stories that explore the mysteries of survival among the earth's most endangered and beloved wildlife. Here we uncover the secret histories of exotic species such as Indonesian orangutans, humpback whales and the imperiled cheetah, the world's fastest animal which nonetheless cannot escape its own genetic weaknesses. Among these genetic detective stories we also discover how the Serengeti lions have lived with FIV, the feline version of HIV, where giant pandas really come from, how bold genetic action pulled the Florida panther from the edge of extinction, how the survivors of the medieval Black Death passed on a genetic gift to their descendants and how mapping the genome of the domestic cat solved a murder case in Canada. With each riveting account of animal resilience and adaptation, a remarkable parallel in human medicine is drawn, adding yet another rationale for species conservation: mining their genomes for cures to our own fatal diseases. *Tears of the Cheetah* offers a fascinating glimpse of the insight gained when geneticists venture into the wild.

The Pygmy Hippo Story Phillip T. Robinson, Gabriella L. Flacke, Knut M. Hentschel, 2017-03-01 A species account and a natural history of the pygmy hippopotamus, a flagship species of West Africa's Upper Guinea Forest Region.

Darwinian Detectives Norman A. Johnson, 2007-07-06 Norman A. Johnson, an evolutionary geneticist, is the author of numerous research publications mainly in the genetics and evolution of reproductive isolation between nascent species. Johnson has taught at the University of Chicago, University of Texas at Arlington and the University of Massachusetts where he is currently an Adjunct Research Assistant Professor in the Department of Plant, Soil and Insect Sciences.

A Journey Through Genetics Karobi Moitra, 2013-12-01 *A Journey Through Genetics* is designed to take the reader on an incredible journey to explore the exciting discoveries in genetics and molecular biology. In Part I the reader will embark on a genetic odyssey starting with the Father of Genetics, Gregor Mendel, leading on to the amazing story of photosynthesis and the discovery of the structure of the DNA double helix and culminating with the invention of one of the most powerful tools in molecular biology, the polymerase chain reaction. The reader will discover the stories behind the science of genetics while going behind the scenes to take a glimpse into the lives of pioneering scientists and will ultimately come to understand that people are just as important as the science they undertake to do. In short, scientists are human too. This book is targeted

toward undergraduate non majors and also as a companion to a standard genetics textbook for Biology majors The book will also be useful for anyone that wants to understand the stories behind the science of genetics *Resurrection Science* M. R. O'Connor,2015-09-15 A Library Journal Best Book of 2015 A Christian Science Monitor Top Ten Book of September In a world dominated by people and rapid climate change species large and small are increasingly vulnerable to extinction In *Resurrection Science* journalist M R O Connor explores the extreme measures scientists are taking to try and save them from captive breeding and genetic management to de extinction Paradoxically the more we intervene to save species the less wild they often become In stories of sixteenth century galleon excavations panther tracking in Florida swamps ancient African rainforests Neanderthal tool making and cryogenic DNA banks O Connor investigates the philosophical questions of an age in which we play god with earth s biodiversity Each chapter in this beautifully written book focuses on a unique species from the charismatic northern white rhinoceros to the infamous passenger pigeon and the people entwined in the animals fates Incorporating natural history and evolutionary biology with conversations with eminent ethicists O Connor s narrative goes to the heart of the human enterprise What should we preserve of wilderness as we hurtle toward a future in which technology is present in nearly every aspect of our lives How can we co exist with species when our existence and their survival appear to be pitted against one another How Prides of Lion Researchers are Evolving to be Interdisciplinary
