Jensen,Christopher Whyte,Scott Cuomo,2022-10-03 An in depth assessment of innovations in military information technology informs hypothetical outcomes for artificial intelligence adaptations In the coming decades artificial intelligence AI could revolutionize the way humans wage war The military organizations that best innovate and adapt to this AI revolution will likely gain significant advantages over their rivals To this end great powers such as the United States China and Russia are already investing in novel sensing reasoning and learning technologies that will alter how militaries plan and fight The resulting transformation could fundamentally change the character of war In Information in War Benjamin Jensen Christopher Whyte and Scott Cuomo provide a deeper understanding of the AI revolution by exploring the relationship between information organizational dynamics and military power The authors analyze how militaries adjust to new information communication technology historically to identify opportunities risks and obstacles that will almost certainly confront modern defense organizations as they pursue AI pathways to the future Information in War builds on these historical cases to frame four alternative future scenarios exploring what the AI revolution could look like in the US military by 2040 **Spacecraft Technology** Mark Williamson,2006-02-23 This book covers the development of space technology in the late 1950s and 1960s from the launch of Sputnik 1 in October 1957 to the landing of men on the moon in 1969 The text begins by looking at the challenge of getting into space and the development of the launch of the space launch vehicle and moves on to discussion of unmanned satellites and spaceprobes and the first capsules deployed in Earth orbit and the Apollo missions to the moon Innovating Victory Vincent OHara,Leonard R Heinz,2022-04-15 Innovating Victory Naval

Technology in Three Wars studies how the world's navies incorporated new technologies into their ships, their practices and their doctrine. It does this by examining six core technologies fundamental to twentieth century naval warfare including new platforms, submarines and aircraft, new weapons, torpedoes and mines and new tools, radar and radio. Each chapter considers the state of a subject technology when it was first used in war and what navies expected of it. It then looks at the way navies discovered and developed the technology's best use in many cases overcoming disappointed expectations. It considers how a new technology threatened its opponents, not to mention its users and how those threats were managed. *Innovating Victory* shows that the use of technology is more than introducing and mastering a new weapon or system. Differences in national resources, force mixtures, priorities, perceptions and missions forced nations to approach the problems presented by new technologies in different ways. Navies that specialized in specific technologies often held advantages over enemies in some areas but found themselves disadvantaged in others. Vincent P. O'Hara and Leonard R. Heinz present new perspectives and explore the process of technological introduction and innovation in a way that is relevant to today's navies which face challenges and questions even greater than those of 1904, 1914 and 1939. **Electronic Concepts** Jerrold H.

Krenz, 2000-02-28 *Electronic Concepts* provides a detailed introduction to modern microelectronics. Equal emphasis is placed on analog and digital circuits and the applications of particular devices and circuits are described within the context of actual electronic systems. The author begins with an overview of several important electronic systems, discussing in detail the types of signals that circuits are used to process. In the following chapters he deals with individual devices. For each device he presents a brief physical description and demonstrates the use of different models in describing the device's behaviour in a particular circuit application. SPICE computer simulations are used throughout the text to supplement analytic descriptions. The book contains over 500 circuit diagrams and figures, over 400 homework problems and over 100 simulation and design exercises. It includes many worked examples and is an ideal textbook for introductory courses in electronics. Laboratory experiments are available via the internet. The History of US Electronic Warfare: "The years of innovation" Alfred

Price, 1984. Schonland Brian Austin, 2016-04-19 *Schonland: Scientist and Soldier* is a biography of Sir Basil Schonland FRS 1896-1972. Schonland was a major contributor to twentieth century British and Commonwealth science both in peace and war. This is not just a scientific biography but a biography that tells much of a highly placed scientist and administrator of the increasing engagement. Australian Science in the Making R. W. Home, Roderick Weir Home, 1990-09-28 In this 1989

volume the Australian Academy of Science celebrates and assesses two centuries of Australian science. *Developments and Advances in Defense and Security* Álvaro Rocha, Carlos Hernán Fajardo-Toro, José María Riola Rodríguez, 2024-04-03 This book gathers the proceedings of the Multidisciplinary International Conference of Research Applied to Defense and Security MICRADS 2023 held at Graduate School of the Colombian Air Force in Bogota, Colombia during July 6-8, 2023. It covers a broad range of topics in systems, communication and defense strategy and political-administrative vision in defense and

Image Objects Jacob Gaboury, 2021-08-03 How computer graphics transformed the computer from a calculating machine into an interactive medium as seen through the histories of five technical objects Most of us think of computer graphics as a relatively recent invention enabling the spectacular visual effects and lifelike simulations we see in current films television shows and digital games In fact computer graphics have been around as long as the modern computer itself and played a fundamental role in the development of our contemporary culture of computing In *Image Objects* Jacob Gaboury offers a prehistory of computer graphics through an examination of five technical objects an algorithm an interface an object standard a programming paradigm and a hardware platform arguing that computer graphics transformed the computer from a calculating machine into an interactive medium Gaboury explores early efforts to produce an algorithmic solution for the calculation of object visibility considers the history of the computer screen and the random access memory that first made interactive images possible examines the standardization of graphical objects through the Utah teapot the most famous graphical model in the history of the field reviews the graphical origins of the object oriented programming paradigm and finally considers the development of the graphics processing unit as the catalyst that enabled an explosion in graphical computing at the end of the twentieth century The development of computer graphics Gaboury argues signals a change not only in the way we make images but also in the way we mediate our world through the computer and how we have come to reimagine that world as computational

The Government Machine Jon Agar, 2003-09-26 An examination of technology and politics in the evolution of the British government machine In *The Government Machine* Jon Agar traces the mechanization of government work in the United Kingdom from the nineteenth to the early twenty first century He argues that this transformation has been tied to the rise of expert movements groups whose authority has rested on their expertise The deployment of machines was an attempt to gain control over state action a revolutionary move Agar shows how mechanization followed the popular depiction of government as machine like with British civil servants cast as components of a general purpose government machine indeed he argues that today's general purpose computer is the apotheosis of the civil servant Over the course of two centuries government has become the major repository and user of information the Civil Service itself can be seen as an information processing entity Agar argues that the changing capacities of government have depended on the implementation of new technologies and that the adoption of new technologies has depended on a vision of government and a fundamental model of organization Thus to study the history of technology is to study the state and vice versa
