Parliaments and Technology Norman J. Vig, Herbert Paschen, 2000-01-01 The first comparative analysis of the development and practice of technology assessment in different national settings Scientific Controversies H. Why Democracies Need Science Harry Collins, Robert Evans, 2017-03-27 We live in times of increasing public distrust of the main institutions of modern society Experts including scientists are suspected of working to hidden agendas or serving vested interests The solution is usually seen as more public scrutiny and more control by democratic institutions experts must be subservient to social and political life In this book Harry Collins and Robert Evans take a radically different view They argue that rather than democracies needing to be protected from science democratic societies need to learn how to value science in this new age of uncertainty By emphasizing that science is a moral enterprise guided by values that should matter to all they show how science can support democracy without destroying it and propose a new institution The Owls that can mediate between science and society and improve technological decision making for the benefit of all

Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of

communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The Encyclopedia of Science and Technology Communication presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics

Democratizing Technology Tyler J. Veak, 2012-02-01 Largely because of the Internet and the new economy technology has become the buzzword of our culture But what is it and how does it affect our lives More

importantly can we control and shape it or does it control us In short can we make technology more democratic Using the work of Andrew Feenberg one of the most important and original figures in the field of philosophy of technology as a foundation the contributors to this volume explore these important questions and Feenberg responds In the 1990s Feenberg authored three books that established him as one of the leading scholars in a rapidly developing field and he is one of the few to delineate a theory for democratizing technological design He has demonstrated the shortcomings of traditional theories of technology and argued for what he calls democratic rationalization where actors intervene in the technological design process to shape it toward their own ends In this book the contributors analyze foundational issues in Feenberg's work

including questions of human nature biotechnology gender and his readings of Heidegger and they also examine practical issues including democratizing technology moral evaluation and environmentalism **New Technology (Routledge Revivals)** Greg J. Bamber, Russell D. Lansbury, 2013-12-19 First published in 1989 this book presents a unique comparative perspective on the relationship between technological change and human resource management Following a detailed introduction chapters deal with a variety of issues including managing change industrial democracy and employee involvement gender and structural change International and well renowned authors provide an authoritative analysis which will be of particular interest to students of Business and Management organisational and technological change Economics and Sociology
