Jorgensen, 2012-12-02 The study of wetlands is a relatively new field and the modelling of these systems is still in its formative stages Nevertheless the editors felt compelled to assemble this volume as a first statement of the state of the art of modelling approaches for the quantitative study of wetlands A global approach has been adopted in this book not only by including a wide geographic distribution of wetlands but also by including papers on both freshwater and saltwater wetlands Wetlands are defined as systems intermediate between aquatic and terrestrial ecosystems and include ecosystems under a wide range of hydrologic and ecologic conditions The wetland types discussed in this book reflect that heterogeneity ranging from intermittently flooded wet meadows to permanently flooded shallow reservoirs and lakes Also included are modelling examples from coastal salt marshes shallow estuaries mesotrophic bogs reedswamps forested swamps and regional wetlands In summary the book presents ecological modelling as a tool for management of these sensitive ecosystems and for studying their structure and function Each chapter has extensive references related to the modelling approach and wetland type discussed It will be useful for wetland scientists and managers and could also serve as a supplemental text on courses in wetland ecology **Designation of Wilderness Areas** United States.
