Subcellular Biochemistry J. L. Avila, J. R. Harris, 1992      Intracellular Parasites José-Luis Avila, J. Robin

Harris, 2013-11-11 Volume 18 of the Subcellular Biochemistry series which specializes in various aspects of the biochemistry of the intracellular parasites was initially proposed by Jose Luis Avila and strongly supported by myself as Series Editor of Subcellular Biochemistry. Considerable assistance was received from Professor Frank Wunderlich, University of Dusseldorf and more particularly from Dr Michael Miles, London School of Hygiene and Tropical Medicine during the compilation of the list of possible chapters. Our initial aim was to present a comprehensive survey of this broad field of study. Although some interesting topics have been lost due to authors backing out late in the production schedule of the book, the manuscripts that were submitted have provided a useful overview of the subject with notable strength within the field of Leishmania. The 13 chapters of the book have been grouped according to subject. The first five chapters deal with Leishmania and are followed by two chapters on Trypanosoma cruzi, two on the malarial parasites and two on the Coccidia. The final two chapters cover the Microsporidia and chemotherapy respectively.      *Subcellular Biochemistry* J. Robin Harris, 2013-11-11 In Volume 25

leading experts present studies on the value of increased ascorbic acid intake and explore its specific contributions to human and animal health.      Novel Immunization Strategies Against Protozoan Parasites D. J. McKeever, 1995-01-01      **Parasites**

**of the Colder Climates** Hannah Akuffo, Inger Ljungström, Ewert Linder, Mats Wahlgren, 2002-12-05 The parasitic load in cold northern climates is widely underappreciated. Many texts on parasitology concentrate on tropical parasitic infections so the reader can be forgiven for thinking that parasites are not a problem in the northern part of the world. *Parasites of the Colder Climates* redresses the balance by focusing on parasites indigenous to      **Transport and Trafficking in the**

**Malaria-Infected Erythrocyte** Gregory R. Bock, Gail Cardew, 2008-04-30 There is an urgent need to uncover new therapies that will protect against malaria as the parasite becomes increasingly resistant to available drugs and this book offers insights into three interrelated aspects of the malaria-infected erythrocyte: The transport of solutes into and out of the infected cell and the use of specific trafficking pathways in drug targeting; The traffic of proteins produced by the intracellular parasite as an essential process for the biogenesis of transport systems; The relationship between the transport of drugs into the infected cell and the mode of drug action and drug resistance.      **Mycoplasma Cell Membranes** Shlomo

Rottem, Itzhak Kahane, 2012-12-06 The mycoplasmas, a trivial name used to denote organisms included in the class Mollicutes, are a group of prokaryotic organisms comprising more than 120 species distinguished from ordinary bacteria by their small size and the total lack of cell walls. The absence of a cell wall in mycoplasmas is a characteristic of outstanding importance to which the mycoplasmas owe many of their peculiarities: for example, their morphological instability, osmotic sensitivity, unique ion pumping systems, resistance to antibiotics that interfere with cell wall biosynthesis, and susceptibility to lysis by detergents and alcohols. The fact that the mycoplasma cells contain only one membrane type, the plasma

membrane constitutes one of their most useful properties for membrane studies once the membrane is isolated it is uncontaminated with other membrane types Another advantage in using mycoplasmas as models for membrane studies stems from the fact that their membrane lipid composition can be altered in a controlled manner This characteristic results from the partial or total inability of the mycoplasmas to synthesize long chain fatty acids and cholesterol making mycoplasmas dependent on the supply of fatty acids from the growth medium The ability to introduce controlled alterations in the fatty acid composition and cholesterol content of mycoplasma membranes has been utilized in studying the molecular organization and physical properties of biological membranes

#### **Biology of the Lysosome** John B. Lloyd, Robert W.

Mason, 2012-12-06 Volume 27 provides a comprehensive review of current knowledge of lysosome function in mammalian cells The book's unique contribution is its series of chapters that offers unparalleled treatment of the metabolic activities of lysosomes

*Physicochemical Methods in the Study of Biomembranes* Herwig J. Hilderson, Gregory B. Ralston, 2013-11-11

In mammalian cells many physiological processes rely on the dynamics of the organization of lipids and proteins in biological membranes The topics in this volume deal with physicochemical methods in the study of biomembranes Some of them have a long and respectable history in the study of soluble proteins and have only recently been applied to the study of membranes Some have traditionally been applied to studies of model systems of lipids of well defined composition as well as to intact membranes Other methods by their very nature apply to organized bilayers comprised of both protein and lipid Van Meer and van Genderen provide us with an introduction to the field Chapter I From their personal perspective regarding the distribution transport and sorting of membrane lipids they formulate a number of biologically relevant questions and show that the physicochemical methods described in this book may contribute in great measure to solving these issues The methods of analytical ultracentrifugation have served faithfully for 60 years in the study of water soluble proteins The use of detergent extraction of membrane proteins and the manipulation of density with H<sub>2</sub>O D<sub>2</sub>O mixtures has extended this technique to the study of proteins and in particular their interactions from biological membranes As described by Morris and Ralston in Chapter 2 this technique can be used to determine a number of important properties of proteins

#### **Endocytic**

**Components: Identification and Characterization** J.J.M. Bergeron, J. Robin Harris, 2013-11-11 In step with the rapid growth of research into the biochemical and functional characterization of the endosome Volume 19 surveys the recent advances in the methodological aspects of this field Coverage includes the use of free flow electrophoresis to define endosome subpopulations the endosomal compartments in rat hepatocytes the role of endosomes in transmembrane signalling and six additional articles

Maintaining Cultures for Biotechnology and Industry Jennie C.

Hunter-Cevera, Angela Belt, 1996-02-21 To retain their usefulness cultures that manufacture economically valuable products must be uncontaminated viable and genetically stable *Maintaining Cultures for Biotechnology and Industry* gives practical advice necessary to preserve and maintain cells and microorganisms important to the biotechnology and pharmaceutical

industries in ways that ensure they will continue to be able to synthesize those valuable metabolites This book covers not just those strains currently being used but also those yet to be discovered and engineered This text is essential for anyone working with cultures who wants to avoid the frustration of losing strains and needs to be able to devise and evaluate new strategies for preservation Written by hands on experts in their respective fields Contains helpful tables and protocols for preserving or maintaining cells cultures and viruses Discusses means to preserve cells by freezing lyophilization drying cyoprotection spore storage continuous propagation and subculturing when absolutely necessary and others Gives information needed to test cultures for stable retention of important characteristics Gives principles needed to devise and evaluate preservation strategies for newly identified and newly engineered cells and organisms Lists culture sources for each class of organism Includes information for characterizing and monitoring recombinant organisms especially important because of their propensity for genetic stability Discusses the history of the continually evolving field of culture preservation Examines the importance of genetically stable cultures as it relates to maintaining patent positions

**Immunochemistry** Vanoss,1994-08-24 This work offers comprehensive coverage of the chemical and physicochemical aspects of immunological interactions as well as the molecules and moieties involved in these interactions It covers in detail the Ag Ab interaction including attraction at a distance between epitope and paratope College or university bookstores may order five or more copies at a special student price available upon request

**myo-Inositol Phosphates, Phosphoinositides, and Signal Transduction** B.B. Biswas,Susweta Biswas,2013-11-11 The heterogeneity of topics is very ambitious and the result is overall successful because of the high quality of the individual contributions highly recommended American Scientist from a review of a previous volume Volume 26 examines the emerging areas of signal transduction based on myoinositol phosphates and Ca<sup>2+</sup> while focusing on plant and animal responses Chapters explore synthesis separation and identification of different inositol phosphates

**Endoplasmic Reticulum** N. Borgese,J. Robin Harris,2012-12-06 In step with the surge of interest in the endoplasmic reticulum the current volume takes an integrated look at this functionally diverse organelle Coverage includes protein translocation and export lipid metabolism antigen presentation and many other subjects gleaned from such diverse fields as cell biology enzymology and membrane biochemistry immunology and signal transduction

**Proteins: Structure, Function, and Engineering** B.B. Biswas,Siddhartha Roy,2013-06-29 Here researchers review the latest breakthroughs in protein research Their contributions explore emerging principles and techniques and survey important classes of proteins that will play key roles in the field s future Articles examine the possibility of a Boltzman like distribution in protein substructures the new technique of Raman spectroscopy and compact intermediate states of protein folding This well illustrated volume also features coverage of proteins that bind nucleic acids

**Membrane Biogenesis** A.H. Maddy,J. Robin Harris,2013-11-11 Scientific reviews are now of two complementary types short very up to date articles as are found in the Trends series and the more traditional longer re views which are more comprehensive but take longer to publish The

Subcellular Biochemistry series belongs to the latter category where a number of reviews on a broad topic are collected together in the one volume. It has been the aim of this volume to summarize the present state of knowledge of membrane assembly. It is appreciated that some relevant topics have not been included and an editor's selection is restricted by the many calls on potential authors who are unable to meet all requests made to them. The absence of a discussion of the roles of lipids is however a reflection of the fact that a recent volume in this series edited by Dr H. Hilderson has been devoted to this subject. Vol 16 Intracellular Transfer of Lipid Molecules and readers are recommended to this source.

**Plant Genetic Engineering** B.B. Biswas, J. Robin Harris, 2013-11-11 Eminent researchers provide broad coverage of plant molecular biology and genetic engineering detailing technological advances in plant cell transformation and responses. This state of the art text includes coverage of molecular action of plant growth hormone signal transduction, light mediated expression of genes and genetic engineering of crop plants and trees.

**Advances in Parasitology**, 1993-08-11 This volume of Advances in Parasitology has a predominantly protozoological flavor. The questionable pathogenicity of Blastocystis, a protozoist closely related to amoeboflagellates. Discussion of Giardia and the evidence of early branching of the eukaryotic stem. Full overview of current knowledge of the immunology of Leishmania. Explanation of the way trypanosomatids transport nutrients and ions across their membranes. A review of the biology of the coccidian parasites of fish with extensive illustrations. A review of the sexuality of parasitic crustaceans.
