**Subjective Understanding** Jaime Guillermo Carbonell, YALE UNIV NEW HAVEN CONN DEPT OF COMPUTER SCIENCE., 1979 Modeling human understanding of natural language requires a model of the processes underlying human thought No two people think exactly alike different people subscribe to different beliefs and are motivated by different goals in their activities A theory of subjective understanding has been proposed to account for subjectively motivated human thinking ranging from ideological belief to human discourse and personality traits A process model embodying this theory has been implemented in a computer system POLITICS POLITICS models human ideological reasoning in understanding the natural language text of international political events POLITICS can model either liberal or conservative ideologies Each ideology produces a different interpretation of the input event POLITICS demonstrates its understanding by answering questions in natural language question answer dialogs

**Inside Computer Understanding** R. C. Schank, C. K. Riesbeck, 2013-10-28 First published in 1981 This book has been written for those who want to comprehend how a large natural language understanding program works Thirty five professionals in Cognitive Science mostly psychologists by training in a summer school were taught to grapple with the details of programming in Artificial Intelligence As a part of the curriculum designed for this project the authors created what they called micro programs These micro programs were an attempt to give students the flavor of using a large AI program without all the difficulty normally associated with learning a complex system written by another person Using the authors parser ELI or story understanding program SAM they also gave students the micro versions of these programs which were very simple versions that operated in roughly the same way as their larger versions but without all the frills Students were asked to add pieces to the programs and otherwise modify them in order to learn how they worked

*Explanation Patterns* R. P. Schank, 2013-08-21 First Published in 1986 In the age of the computer conjecture about things mechanical has naturally led to the question of whether machines can think As the emphasis on Artificial Intelligence AI has grown rapidly questions about machine intelligence have begun to have a certain urgency The question we are concerned with in this book is If we can find a set of processes that machines can slavishly follow and if by so doing these machines can come up with creative thoughts what would that tell us about human beings If the machine s procedure was adapted from a human procedure that is if all the machine was doing was what we know people are doing would we abandon our inherent skepticism about the abilities of machines or would we demystify our inherent admiration for things human In a sense these are the issues dealt with in this book The author says in a sense because this book is no way a philosophical treatise Rather it is an exercise in Artificial Intelligence and in Cognitive Science it is an attempt to come to understand one of the most complex problems of mind by examining some of the mechanisms of mind to define the apparatus that underlies our ability to think

*Argument Comprehension* Sergio J. Alvarado, 2012-12-06 by Michael G Dyer Natural language processing NLP is an area of research within Artificial Intelligence AI concerned with the comprehension and generation of natural language text Comprehension involves the dynamic construction of conceptual representations linked by causal relationships and organized indexed for subsequent retrieval Once these conceptual representations have been created comprehension can be tested by means of such tasks as paraphrasing question answering and summarization Higher level cognitive tasks are also modeled within the NLP paradigm and include translation acquisition of word meanings and concepts through reading analysis of goals and plans in multi agent environments e g coalition and counterplanning behavior by narrative characters invention of novel stories recognition of abstract themes such as irony and hypocrisy extraction of the moral or point of a story and justification refutation of beliefs through argumentation The robustness of conceptually based text comprehension systems is directly related to the nature and scope of the knowledge constructs applied during conceptual analysis of the text Until recently conceptually based natural language systems were developed for and applied to the task of narrative comprehension Dyer 1983a Schank and Abelson 1977 Wilensky 1983 These systems worked by recognizing the goals and plans of narrative characters and using this knowledge to build a conceptual representation of the narrative xx UNDERSTANDING EDITORIAL TEXT including actions and intentions which must be inferred to complete the representation A large portion of text appearing in newspapers and magazines however is editorial in nature

**Goal Concepts in Personality and Social Psychology** Lawrence A. Pervin, 2015-06-19 Is behavior motivated And if so can it be motivated by the anticipation of future events What role does cognition play in such motivational processes And further what role does motivation play in ongoing cognitive activity Questions such as these provide the foundation for this book originally published in 1989 More specifically the chapters in this book address the question of the utility of goals concepts in studying motivation and social cognition

*Metaphors of Mind* Robert J. Sternberg, 1990-07-27 *Metaphors of Mind* seeks to help readers understand human intelligence as viewed from a variety of standpoints such as those of psychology anthropology computational science sociology and philosophy Much of the present confusion surrounding the concept of intelligence stems from our having looked at it from these different standpoints without considering how they relate to each other or how they might be combined into a unified view that goes beyond the boundaries of a particular discipline Readers of *Metaphors of Mind* will come away with a comprehensive understanding of the concept of intelligence and how ideas about it have evolved and are continuing to evolve

*Affect and Cognition* Margaret S. Clark, Susan T. Fiske, 2014-01-14 First published in 1982 In late May 1981 the 17th annual Carnegie Symposium on Cognition brought 16 cognitive and social psychologists to Carnegie Mellon University Their topic was affect and cognition For only the second time the Carnegie Symposium had been organized by social psychologists John Carroll and John Payne chaired the first social cognitive symposium in 1975 Their conference came precisely at the time when social cognition was beginning to take root within social psychology Since then the area has

Mitchell, 1983 Knowledge-engineering Shells: Systems And Techniques Nikolas G Bourbakis, 1993-09-30 This book offers a systematic approach to knowledge engineering problems It gives a brief overview of knowledge engineering systems and environments covering both classical and recent techniques of the design and evaluation of them Detailed descriptions of particular techniques and applications are also provided **Strategies for Natural Language Processing** W. G. Lehnert, M. H. Ringle, 2014-04-04 First published in 1982 Simply defined the field of natural language processing is concerned with theories and techniques that address the problem of natural language communication with computers One of the goals of this research is to design computer programs that will allow people to interact with computers in natural conversational dialogues Scientific and Technical Aerospace Reports , 1980 **Social Information Processing and Survey Methodology** Hans-J. Hippler, Norbert Schwarz, Seymour Sudman, 2012-12-06 Survey researchers have long been aware that the way in which questions are asked determines the obtained responses However the exact processes that mediate response effects remained elusive In the present volume cognitive psychologists and survey methodologists explore the cognitive processes that underlie respondents answers to survey questions The contributors provide an introduction to information processing theories for survey researchers review current knowledge of response effects in the light of recent theorizing in cognitive psychology and report a number of experimental studies on question context and question wording In combination the chapters provide a theoretical framework for the analysis of response effects in surveys and raise a number of applied and theoretical issues that have so far not been addressed in cognitive psychology Case-Based Planning Kristian J. Hammond, 2012-12-02 Perspectives in Artificial Intelligence Volume 1 Case Based Planning Viewing Planning as a Memory Task focuses on the processes methodologies and techniques employed in viewing planning as a memory task The publication first elaborates on planning and memory and learning from planning Discussions focus on learning from cases learning plans learning to predict failures case based planning structure of case based planning and learning from planning The text then elaborates on planning from memory and planning Thematic Organization Packets TOPs and strategies including TOPs in understanding and planning TOPs and strategies and function of memory The manuscript takes a look at modifying and repairing plans case based planning and planning and planners Topics include CHEF as a program case based planning as planning and learning noticing and explaining the failure storing the plan different situations for altering plans and introduction of failure The publication is a vital reference for researchers interested in viewing planning as a memory task Digital Libraries and Multimedia Archives Maristella Agosti, Marco Bertini, Stefano Ferilli, Simone Marinai, Nicola Orio, 2017-04-05 This book constitutes the thoroughly refereed proceedings of the 12th Italian Research Conference on Digital Libraries IRCDL 2016 held in Firenze Italy in February 2016 The 15 papers presented were carefully selected from 23 submissions and cover topics such as formal methods long term preservation metadata creation

**Meaning and Mental Representations** Umberto Eco,Marco Santambrogio,Patrizia Violi,1988 an excellent collection Journal of Language Social Psychology An important collection of original essays by well known scholars debating the questions of logical versus psychologically based interpretations of language *Computation of Language* Roland Hausser,2012-12-06 The study of linguistics has been forever changed by the advent of the computer Not only does the machine permit the processing of enormous quantities of text thereby securing a better empirical foundation for conclusions but also since it is a modelling device the machine allows the implementation of theories of grammar and other kinds of language processing Models can have very unexpected properties both good and bad and it is only through extensive tests that the value of a model can be properly assessed The computer revolution has been going on for many years and its importance for linguistics was recognized early on but the more recent spread of personal workstations has made it a reality that can no longer be ignored by anyone in the subject The present essay in particular could never have been written without the aid of the computer I know personally from conversations and consultations with the author over many months how the book has changed If he did not have at his command a powerful typesetting program he would not have been able to see how his writing looked and exactly how it had to be revised and amplified Even more significant for the evolution of the linguistic theory is the easy testing of examples made possible by the implementation of the parser and the computer held lexicon Indeed the rule set and lexicon grew substantially after the successes of the early implementations created the desire to incorporate more linguistic phenomena The 1995 Goddard Conference on Space Applications of Artificial Intelligence and Emerging Information Technologies Carl F. Hostetter,1995 **Readings in Machine Learning** Jude W. Shavlik,Thomas Glen Dietterich,1990 The ability to learn is a fundamental characteristic of intelligent behavior Consequently machine learning has been a focus of artificial intelligence since the beginnings of AI in the 1950s The 1980s saw tremendous growth in the field and this growth promises to continue with valuable contributions to science engineering and business Readings in Machine Learning collects the best of the published machine learning literature including papers that address a wide range of learning tasks and that introduce a variety of techniques for giving machines the ability to learn The editors in cooperation with a group of expert referees have chosen important papers that empirically study theoretically analyze or psychologically justify machine learning algorithms The papers are grouped into a dozen categories each of which is introduced by the
