Klein, 2013-12-01 There is a near universal folk saying that everyone wishes to live a good long life but no one wishes for old age More contemporarily the rock and roll band Little Feat sang You know that you're over the hill when your mind's making promises your body can't fill This book is about the good long life It is a book about primary prevention strategies in the aging process it is not about preventing that process It is not about being old Instead it is about the things that individuals and the helping professionals who provide them with counsel and assistance can do to prevent the preventable problems of advancing age and to better manage those changes in functioning that cannot be prevented In short it is about extending all our capacities to the fullest so that we can better keep all those promises that we make to ourselves and others Aging is a life long process We focus here on the changes that are taking place in our selves and in our society as

we age In particular we focus on what we can do to affect these changes by the choices we make and how we live This book offers primary prevention strategies for mature and older adults with the recognition that mature adulthood starts as soon as we are old enough to truly appreciate our active role in our own aging processes

**Successful Cognitive and Emotional Aging** Colin A. Depp, Dilip V. Jeste, 2009-08-28 The critical importance of brain health to the well being of older adults is becoming increasingly clear However an important aspect that interests most people relates to what clinicians and their adult patients and family members can do to retain and even improve cognitive and emotional functioning as they age Successful Cognitive and Emotional Aging thoroughly discusses the neuroscience of healthy aging and presents effective strategies for staying lively engaged and positive The book is organized into three parts The first one focusing on behavioral and psychosocial aspects strives to place cognitive aging in a broad context With chapters that explore such topics as the meaning of wisdom the role of spirituality in healthy aging and what centenarians can teach us about cognition and emotion this section sets the stage for a rich robust yet nuanced treatment of its subject The second part addresses the biological aspects and presents the scientific foundations of cognitive aging as well as reviews the research on the role of factors such as stress resilience and diet Finally the third section addresses prevention and intervention strategies in a practical down to earth fashion addressing questions such as What environments encourage physical activity and How can we promote resilience Several features of the book are especially noteworthy The book bridges the gap between popular science for a lay audience and the heavily theoretical academic approach of other books on the aging brain making it suitable not only for clinicians but for their patients and family members as well The fascinating story of an innovative intergenerational school makes the case for meaningful activity not just for the older participants but for the entire

community and is suggestive of the plethora of possible programs that might prove effective at keeping the older population engaged and contributing. Results from a 70 year longitudinal study are extensively reviewed and identify the coping strategies that seem to bring about well being in older age. The most promising strategies for successful aging applicable to a large majority of the population are summarized by the editors so that clinicians as well as consumers of healthcare may implement them as they see fit. As the baby boomers reach what used to be considered old age the demand for evidence based strategies for retaining and improving cognition will only increase. Fortunately as the editors note it is never too early or too late to start working toward the goal of improving brain health.

**BOOK JACKET**

**Successful Aging** Sheung-Tak Cheng, Iris Chi, Helene H. Fung, Lydia W. Li, Jean Woo, 2015-01-26. This book brings together state of the art research on successful aging in Asian populations and highlights how the factors that contribute to successful aging differ from those in the West. It examines the differences between the Asian and Western contexts in which the aging process unfolds including cultural values, lifestyles, physical environments and family structures. In addition it examines the question of how to add quality to longer years of life. Specifically it looks at ways to promote health, preserve cognition, maximize functioning with social support and maintain emotional well being despite inevitable declines and losses. Compared to other parts of the world Asia will age more quickly as a result of the rapid socioeconomic developments leading to rising longevity and historically low fertility rates in some countries. These demographic forces in vast populations such as China are expected to make Asia the main driver of global aging in the coming decades. As a result researchers, professionals, policymakers as well as the commercial sector in both East and West are increasingly interested in gaining a deeper understanding of aging in Asia.
