Current Controversies in Philosophy of Memory André Sant'Anna, Christopher Jude McCarroll, Kourken Michaelian, 2022-07-29 The surge of philosophical interest in episodic memory has brought to light a number of controversial questions about this form of memory that have only recently begun to be addressed in detail. This book organises discussion around six such questions, offering two new chapters per question from experts in the field. The questions are: I What is the relationship between memory and imagination? II Do memory traces have content? III What is the nature of mnemonic confabulation? IV What is the function of episodic memory? V Do non-human animals have episodic memory? VI Does episodic memory give us knowledge of the past? The book constitutes a valuable resource for researchers, teachers and students alike. For researchers it provides an up-to-date discussion of some of the main theories, arguments and problems in the area. For teachers the book can supply the readings for an entire course or particular sections can provide the readings for specific units within a broader philosophy of memory course. For students the book offers accessible discussions of some of the most recent topics in the philosophy of memory which, when taken together, serve as a well-rounded introduction to the area.

Memory Mastery: Proven Techniques for Improving Retention and Recall Daniel South, Memory is the cornerstone of our identity, our experiences and our ability to navigate the world. It allows us to learn from the past, shape the present and plan for the future. Yet the human memory system is often underestimated and many believe that memory capacity is fixed and unchangeable. This belief is simply untrue. While genetic factors undoubtedly play a role, a significant portion of our memory skills can be significantly enhanced through conscious

and workgroups Manipulative approaches to human brain dynamics Keiichi Kitajo,Takashi Hanakawa, Risto Juhani Ilmoniemi,Carlo Miniussi,2015-05-29 In this EBook we highlight how newly emerging techniques for non invasive manipulation of the human brain combined with simultaneous recordings of neural activity contribute to the understanding of brain functions and neural dynamics in humans A growing body of evidence indicates that the neural dynamics e g oscillations synchrony are important in mediating information processing and networking for various functions in the human brain Most of previous studies on human brain dynamics however show correlative relationships between brain functions and patterns of neural dynamics measured by imaging methods such as electroencephalography EEG magnetoencephalography MEG near infrared spectroscopy NIRS positron emission tomography PET and functional magnetic resonance imaging fMRI In contrast manipulative approaches by non invasive brain stimulation NIBS have been developed and extensively used These approaches include transcranial magnetic stimulation TMS and transcranial electric stimulation tES such as transcranial direct current stimulation tDCS alternating current stimulation tACS and random noise stimulation tRNS which can directly manipulate neural dynamics in the intact human brain Although the neural correlate approach is a strong tool we think that manipulative approaches have far greater potential to show causal roles of neural dynamics in human brain functions There have been technical challenges with using manipulative methods together with imaging methods However thanks to recent technical developments it has become possible to use combined methods such as TMS EEG coregistration We can now directly measure and manipulate neural dynamics and analyze functional consequences to show causal roles of neural dynamics in various brain functions Moreover these combined methods can probe brain excitability plasticity and cortical networking associated with information processing in the intact human brain The contributors to this EBook have succeeded in showcasing cutting edge studies and demonstrate the huge impact of their approaches on many areas in human neuroscience and clinical applications **Electrocorticographic Brain-Computer Interfaces** Mikhail Lebedev,Alexei Ossadtchi,Mikhail Sinkin,Christoph Guger,Alessandro Vato,Eric Leuthardt,2022-02-22 Topic Editor Christoph Guger is the CEO of Guger Technologies All other topic editors declare no competing interests with regards to the Research Topic subject
