Catastrophism Richard J. Huggett, 1997 One of the most dramatic intellectual events of the last decade has been the stunning re emergence of the catastrophist paradigm in the biological and earth sciences From killer asteroids to emergent viruses it has become evident that the history of life on earth has been shaped far more than previous orthodoxies would allow by extreme events and non linear processes The old uniformitarian dogma of steady rate evolution has been decisively challenged by the research of contemporary neo catastrophists like Stephen Jay Gould David Raup Stuart Ross Taylor Ursula Marvin and Kenneth Hsu Whether debating the origin of the moon or the current human impact on the biosphere they urge us to recognize the radically event or chance driven structure of natural history Surveying these various theories of uniformitarian and neo catastrophist thought in a clear and accessible fashion and seeking a path towards a new and workable synthesis Richard

Modeling and Practice of Erosion and Sediment Transport under Change Mohamed Meddi, Gil Mahé, Hafzullah Aksoy, 2019-09-17 Climate and anthropogenic changes impact the conditions of erosion and sediment

transport in rivers Rainfall variability and in many places the increase of rainfall intensity have a direct impact on rainfall erosivity Increasing changes in demography have led to the acceleration of land cover changes in natural areas as well as in cultivated areas and sometimes in degraded areas and desertified landscapes These anthropogenized landscapes are more sensitive to erosion On the other hand the increase in the number of dams in watersheds traps a great portion of sediment fluxes which do not reach the sea in the same amount nor at the same quality with consequences on coastal geomorphodynamics This book is dedicated to studies on sediment fluxes from continental areas to coastal areas as well as observation modeling and impact analysis at different scales from watershed slopes to the outputs of large river basins This book is concentrated on a number of keywords erosion and sediment transport model and practice and change The keywords are briefly discussed with respect to the relevant literature The contributions in this book address observations and models based on laboratory and field data allowing researchers to make use of such resources in practice under changing conditions

Open-Air Rock-Art Conservation and Management Timothy Darvill, Antonio Batarda Fernandes, 2014-06-20 While much has been achieved in understanding and managing weather effects and erosion phenomena affecting ancient imagery within the relatively protected environments of caves and rock shelters the same cannot be said of rock art panels situated in the open air Despite the fact that the number of known sites has risen dramatically in recent decades there are few examples in which the weathering and erosion dynamics are under investigation with a view to developing proposals to mitigate the impact of natural and cultural processes Most of the work being done in different parts of the world appears to be ad hoc with minimal communication on such matters between teams and with the wider archaeological community This richly illustrated book evaluates rock art conservation in an holistic way bringing together researchers from across the world to share experiences of work in progress or recently completed The chapters focus on a series of key themes documentation projects and resource assessments the identification and impact assessment of weathering erosion processes at work in open air rock art sites the practicalities of potential or implemented conservation interventions experimentation and monitoring programs and general management issues connected with public presentation and the demands of ongoing research investigations Consideration is given to the conservation of open air rock art imagery from many periods and cultural traditions across the Old and New Worlds This timely volume will be of interest to conservators managers and researchers

dealing with aesthetic and ethical issues as well as technical and practical matters regarding the conservation of open air rock art sites
