The Age of Automation George M. Hall, 1995-08-30 Automation now supplants economic activity more than it supports it Furthermore this process is fueled by enormous economic forces which intensifies dependence on automation and spawns other sociological consequences Of these consequences fraud generates the highest immediate losses amounting to 300 billion annually In the long run however the greatest economic cost will occur through loss of jobs and a lowering of net skills for most of the balance Other consequences include pervasive invasion of privacy and overdependence on technology at the expense of developing critical reasoning judgement and a personal sense of responsibility Fortunately many of these consequences could be ameliorated by automated countermeasures that offset the excesses Unfortunately it usually takes a crisis to institute fundamental reform though the looming economic meltdown stemming from the mounting federal debt offers just such an opportunity

Crypto Asset Investing in the Age of Autonomy Jake Ryan, 2020-12-22 Competition the drive for efficiency and continuous improvement ultimately push businesses toward automation and later towards autonomy If a business can operate without human intervention it will minimize its operational cost If Uber can remove the expense of a driver with an autonomous vehicle it will provide its service cheaper than a competitor who can't If an artificially intelligent trading company can search find and take advantage of some arbitrage opportunity then it can profit where its competitors cannot A business that can analyze and execute in real time without needing to wait for a human to act is a business that will be able to take advantage of brief inefficiencies from other markets or businesses This trend following a thesis that is based on 100 years of proven economic theory Short wave economic cycles those 5 to 10 year cycles are driven by credit but the long wave economic cycles those 50 to 60 year cycles are driven by technological revolution We've had 5 cycles over the past 200 years with the last wave the Age of Information Telecommunications We've seen evidence that a new cycle has begun Technological revolutions come by way of a cluster of new innovations About a decade ago you started to see AI robotics and IoT sensors delivering on automation That's been powerful but not transformational It does not force businesses to fundamentally change how they do business The last piece of the puzzle was cryptocurrency because it allows us to process and transfer economic value without human intervention Soon there will be a global race to build autonomous operations Businesses and organizations without autonomous operations simply will not be able to compete with those that do because autonomy is the ultimate competitive advantage Crypto is the mechanism that will accrue value from being the infrastructure for the next digital financial revolution Crypto Asset Investing lays out a case that we've begun a new technological revolution similar to the Internet Age of the 1990's Artificial intelligence the Internet of Things robotics and cryptocurrency are converging to deliver on a new age what I call the Age of Autonomy Understanding the transformation that's taken place before anyone else can yield enormous investment opportunity In this book you'll learn how and why to invest in crypto assets

The Last Human Job Allison Pugh, 2026-01-27 A timely and urgent argument for preserving the work that connects us in the age of automation A compelling case for valuing care as a societal good and as skilled labor The Nation With the rapid development of artificial intelligence and labor saving technologies like self checkouts and automated factories the future of work has never been more uncertain and even jobs requiring high levels of human interaction are no longer safe The Last Human Job explores the human connections that underlie our work arguing that what people do for each other in these settings is valuable and worth preserving Drawing on in depth interviews and observations with people in a broad range of professions from physicians teachers and coaches to chaplains therapists caregivers and hairdressers Allison Pugh develops the concept of connective labor a kind of work that relies on empathy the spontaneity of human contact and a mutual recognition of each other's humanity The threats to connective labor are not only those posed by advances in AI or

apps Pugh demonstrates how profit driven campaigns imposing industrial logic shrink the time for workers to connect enforce new priorities of data and metrics and introduce standardized practices that hinder our ability to truly see each other She concludes with profiles of organizations where connective labor thrives offering practical steps for building a social architecture that works Vividly illustrating how connective labor enriches the lives of individuals and binds our communities together The Last Human Job is a compelling argument for us to recognize value and protect humane work in an increasingly automated and disconnected world
