Succeeb With Simplicity:

From Instrumentalism to Constructive Realism Theo A.F. Kuipers, 2013-04-18 Surprisingly modified versions of the confirmation theory Carnap and Hempel and truth approximation theory Popper turn out to be smoothly sythesizable The glue between the two appears to be the instrumentalist methodology rather than that of the falsificationist The instrumentalist methodology used in the separate comparative evaluation of theories in terms of their successes and problems hence even if already falsified provides in theory and practice the straight road to short term empirical progress in science la Laudan It is also argued that such progress is also functional for all kinds of truth approximation observational referential and theoretical This sheds new light on the long term dynamics of science and hence on the relation between the main epistemological positions viz instrumentalism Toulmin Laudan constructive empiricism Van Fraassen referential realism Hacking Cartwright and theory realism of a non essentialist nature constructive realism la Popper Readership Open minded philosophers and scientists The book explains and justifies the scientist s intuition that the debate among philosophers about instrumentalism and realism has almost no practical consequences

Science Theo A.F. Kuipers,2012-12-06 Although there is an abundance of highly specialized monographs learned collections and general introductions to the philosophy of science only a few 25 years synthetic monographs and advanced textbooks have appeared in the last The philosophy of science seems to have lost its self confidence The main reason for such a loss is that the traditional analytical logical empiricist approaches to the philosophy of science had to make a number of concessions especially in response to the work of Popper Kuhn and Lakatos With Structures in Science I intend to present both a synthetic mono graph and an advanced textbook that accommodates and integrates the insight of these philosophers in what I like to call a neo classical approach The resulting monograph elaborates several important topics from one or more perspectives by distinguishing various kinds of research programs and various ways of explaining and reducing laws and concepts and by summarizing an integrated explication presented in From Instrumentalism to Constructive Realism ICR of the notions of confirmation empirical progress and truth approximation *Ethics of Success* William M. Explaining Beauty in Mathematics: An Aesthetic Theory of Mathematics Ulianov Montano,2013-12-20 This book develops a naturalistic aesthetic theory that accounts for aesthetic phenomena in mathematics in the same terms as it accounts for more traditional aesthetic phenomena Building upon a view advanced by James McAllister the assertion is that beauty in science does not confine itself to anecdotes or personal idiosyncrasies but rather that it had played a role in shaping the development of science Mathematicians often evaluate certain pieces of mathematics using words like beautiful elegant or even ugly Such evaluations are prevalent however rigorous investigation of them of mathematical beauty is much less common The volume integrates the basic elements of aesthetics as it has been developed over the last 200 years with recent findings in neuropsychology as well as a good knowledge of mathematics The volume begins with a discussion of the reasons to interpret mathematical beauty in a literal or non literal fashion which also serves to survey historical and contemporary approaches to mathematical beauty The author concludes that literal approaches are much more coherent and fruitful however much is yet to be done In this respect two chapters are devoted to the revision and improvement of McAllister s theory of the role of beauty in science These antecedents are used as a foundation to formulate a naturalistic aesthetic theory The central idea of the theory is that aesthetic phenomena should be seen as constituting a complex dynamical system which the author calls the aesthetic as process theory The theory comprises explications of three central topics aesthetic experience in mathematics aesthetic value and aesthetic judgment The theory is applied in the final part of the volume and is used to account for the three most salient and often used aesthetic terms often used in mathematics beautiful elegant and ugly This application of the theory serves to illustrate the theory in action but also to further discuss and develop some details and to showcase the theory s explanatory capabilities
