Programming with C Giulio Zambon, 2015-03-25 Sudoku Programming with C teaches you how to write computer programs to solve and generate Sudoku puzzles This is a practical book that will provide you with everything you need to write your own books of Sudoku Classic and Samurai puzzles But be warned after reading it you ll discover that the puzzles in your local paper are not so challenging after all We like Sudokus because they test our capacity to recognize and interpret patterns But how are the clues generated Where do those quasi symmetrical configurations come from When the author explored the Web to find out he discovered that there were many sites that explained how to solve Sudokus but none that told him how create them He also saw many sites and apps to play Sudoku but perhaps not surprising no indication of how they worked So he had to develop his own applications in order to find out And from the very start he decided that he would publish the code for anyone else to use and perhaps tinker with but the author wrote it in such a way that also lets readers with limited knowledge of programming techniques understand it In fact you could decide to start generating thousands of puzzles almost immediately and go through the explanations of algorithms and techniques later a bit at a time The author chose to write the application in plain old C because he wanted to make the code accessible to as many people as possible In this book you will find an explanation of all solving strategies and the code to implement them Writing the Solver application was more difficult than writing the Generator because it required designing and implementing each strategy separately However the author wanted to include a solving program capable of listing the strategies necessary to solve any particular puzzle He also wanted to check whether a puzzle was solvable analytically without any guessing This book includes the full listings of both the Generator and the Solver and explanations of all C modules with walk throughs and examples Solving Optimization
