**Studies on the Theory of General Dynamic Economic Equilibrium** Giulio La Volpe, trans Helen Ampt, 1993-01-21 This book presents a theory of the general dynamic economic equilibrium which is a development of the static theory of Walras and Pareto The work has built up an analytical model of the effective current movement of an economic system founded on the logic of the individual changing programmes a basis for finding out the laws of all types of endogenous and exogenous movements of the economy Indeed the model can be used in the treatment of the typical problems of dynamic economics by means of the author's method of variational dynamic analysis Dynamic Economic Theory Michio Morishima, 1996-10-17 This book develops multi sector general equilibrium theory in the tradition of Hicks's Value and Capital

**A History of Economic Science in Japan** Aiko Ikeo, 2014-04-03 Japanese economists began publishing scientific papers in renowned journals including *Econometrica* in the 1950s and had made their significant contributions to the sophistication of general equilibrium analysis by intensive use of a variety of mathematical instruments They had contributed significantly to the transformation of neoclassical economics This book examines how it became possible for Japanese economists to do so by shedding light on the professional discussion of the international gold standard and parity policies in the early twentieth century the acceptance of mathematical economics in the following period the impact of establishment of the Econometric Society 1930 and the swift distribution of theory oriented economics journals since 1930 This book also includes topics on the historical research of the Japanese foundations of modern economics the transformation of the economics of Keynes into Keynesian economics Japanese developments in econometrics and Martin Bronfenbrenner's visit to Japan in the post WWII period This book provides insight into the economic research done by Japanese scholars in the international context It traces how during the period 1900-1960 economics was harmonized with economics and a standard economics was re-shaped on the basis of mathematics thanks to economists' appetite for rigor and will help to contribute to existing literature

**Structural Dynamics and Economic Growth** Richard Arena, Pier Luigi Porta, 2012-05-03 Ever since Adam Smith economists have been preoccupied with the puzzle of economic growth The standard mainstream models of economic growth were and often still are based either on assumptions of diminishing returns on capital with technological innovation or on endogenous dynamics combined with a corresponding technological and institutional setting An alternative model of economic growth emerged from the Cambridge School of Keynesian economists in the 1950s and 1960s This model developed mainly by Luigi Pasinetti emphasizes the importance of demand human learning and the growth dynamics of industrial systems Finally in the past decade new mainstream models have emerged incorporating technology or demand based structural change and extending the notion of balanced growth This collection of essays reassesses Pasinetti's theory of structural dynamics in the context of these recent developments with contributions from economists writing in both the mainstream and the Cambridge Keynesian traditions and including Luigi Pasinetti William Baumol Geoffrey Harcourt and

Pomini,2014-06-05 The years in between the two World Wars were a crucial period for the building of economic dynamics as an autonomous field Different competing research programs arose at international level Great progress was achieved by studies on the business cycle with the first statistical applications Outside the theory of the business cycle a significant line of inquiry was that pursued at the end of the 1930s by Hicks and Samuelson This period also saw the formulation of another approach to formal economic dynamics which in the 1930s represented the frontier of research from the analytical point of view It was an approach which set the notion of equilibrium at the basis of dynamics exactly as in the case of statics thus leading to the definition of a dynamic equilibrium approach The aim of this volume is to take into consideration this original research field sparked from Pareto s works and initially developed during the 1920s in the United States by two American mathematicians G Evans and C Ross In the 1930s the concept of dynamic equilibrium became the main research field of the Pareto school which gave its most important contributions in this field The Paretian economists as Amoroso de Pietri Tonelli Sensini and the younger such as Bordin Palomba La Volpe Fossati and Zaccagnini for the most part students of the former developed this approach in many directions The theory of dynamic equilibrium reached remarkable results from an analytical viewpoint through the wide application of the functional calculus thus anticipating a perspective which was taken into consideration in the 1960s with the theory of optimal growth Despite the Pareto school s relevance it remained widely unknown not only at international level but also in Italy Recently it has been object of renewed interest This present work aims at reconstructing the fundamental contributions offered by the Pareto school in forming the economic dynamics theory

Walker, 2006-01-16 In order to understand the various strands of general equilibrium theory why it has taken the forms that it has since the time of L on Walras and to appreciate fully a view of the state of general equilibrium theorising it is essential to understand Walras s work and examine its influence The first section of this book accordingly examines the foundations of Walras s work These include his philosophical and methodological approach to economic modelling his views on human nature and the basic components of his general equilibrium models The second section examines how the influence of his ideas has been manifested in the theorising of his successors surveying the models of theorists such as H L Moore Vilfredo Pareto Knut Wicksell Gustav Cassel Abraham Wald John von Neumann J R Hicks Kenneth Arrow and Gerard Debreu The treatment also examines models of many types in which Walras s influence is explicitly acknowledged      **Risk Management in Crisis** Piotr Jedynak, Sylwia Bąk, 2021-08-19 Risk management is a domain of management which comes to the fore in crisis This book looks at risk management under crisis conditions in the COVID 19 pandemic context The book synthesizes existing concepts strategies approaches and methods of risk management and provides the results of empirical research on risk and risk management during the COVID 19 pandemic The research outcome was based on the authors study on 42 enterprises of different sizes in various sectors and these firms have either been negatively affected by COVID 19 or have thrived successfully under the new conditions of conducting business activities The analysis looks at both the impact of the COVID 19 pandemic on the selected enterprises and the risk management measures these enterprises had taken in response to the emerging global trends The book puts together key factors which could have determined the enterprises failures and successes The final part of the book reflects on how firms can build resilience in challenging times and suggests a model for business resilience The comparative analysis will provide useful insights into key strategic approaches of risk management The Open Access version of this book available at <http://www.taylorfrancis.com/books/oa/mono/10.4324/9781003131366> has

Boland, 2014-05-01 The major methodological task for modern economists has been to establish the testability of models Too often however methodological assumptions can make a model virtually impossible to test even under ideal conditions yet few theorists have examined the requirements and problems of assuring testability in economics In *The Methodology of Economic Model Building* first published in 1989 Lawrence Boland presents the results of a research project that spanned more than twenty years He examines how economists have applied the philosophy of Karl Popper relating methodological debates about falsifiability to wider discussions about the truth status of models in natural and social sciences He concludes that model building in economics reflects more the methodological prescriptions of the economist Paul Samuelson than Popper's falsificationism This title will prove invaluable to both students and researchers and represents a substantial contribution to debates about the scientific status of economics      *A Dictionary of Economics* John Black, Nigar Hashimzade, Gareth Myles, 2012-03-15 An authoritative and comprehensive dictionary containing clear concise definitions of over 3 400 key economic terms this A to Z covers all aspects of economics including economic theory applied microeconomics and macroeconomics labour economics public economics and public finance monetary economics and environmental economics There is strong coverage of international trade and many entries on economic organizations and institutions from around the world Fully revised to keep up to date with this fast moving field this new edition expands the coverage to include terms relevant to the financial crisis such as black swan credit crunch Northern Rock and Iceland making this dictionary the most up to date available Entries are supplemented by entry level web links which are listed and regularly updated on a companion website giving the reader the opportunity to explore further the areas covered in the dictionary Useful appendices include a list of institutional acronyms and their affiliated websites a list of Nobel prize winners in economics the Greek alphabet and a list of relevant websites As ideal for browsing as it is useful for quick reference this dictionary remains an essential guide for students and teachers of economics business and finance as well as for professional economists and anyone who has to deal with economic data      *Science & Engineering Indicators*
