

SEMANTICS

Semantics is the branch of linguistics that deals with studying meaning in language. It examines the meaning of words, phrases, sentences, and language.

OVERVIEW

Semantics looks at literal and implied meanings, the connotations words may carry, and how these meanings can change across different contexts. It also studies the relationships between words and phrases, like synonymy (words with the same or similar meanings), antonymy (words with opposite meanings), and polysemy (words or phrases with multiple, related meanings).

EXAMPLE

Interpreting Irony: Irony refers to when someone says one thing but means another, often conveying implied criticism or sarcasm. For example, if someone says, "What a great day!" while standing in pouring rain, this would be ironic because it implies disappointment with the current situation despite saying otherwise through their words.

Cross-linguistic Semantics of Tense, Aspect, and Modality Lotte

Hogeweg, Helen de Hoop, Andrej Malchukov, 2009-11-30 In recent years we have witnessed on the one hand an increased interest in cross linguistic data in formal semantic studies and on the other hand an increased concern for semantic issues in language typology However only few studies combine semantic and typological research for a particular semantic domain such as the papers in Bach et al 1995 on quantification and Smith 1997 on aspect This book brings together formal semanticists with a cross linguistic perspective and or those working on lesser known languages and typologists interested in semantic theory to discuss semantic variation in the specific domain of Tense Aspect and Mood Modality
