1. INTRODUCTION

Psychology is the study of mind and behavior. Psychology, merging from biology and philosophy, has many different schools of thought and subdivided subjects. One of the most famous school in psychology is psychoanalysis, marking by the interpretation of dream and other Freudian theory. The Psychoanalysis or psychodynamic theory arose from the 19th century, which focus on the unconsciousness and dream analysis. Psychoanalysis is the first wave of psychotherapy development which has a huge influence on the development of psychology overall and other psychologists. Personality psychology is a subdivided subject which studies the psychological type and individual personality. In this paper, it discusses the development of Freud's personality theory as well as how his theory influences other famous psychoanalysis psychologists: Anna Freud, Carl Jung, and Otto Rank.

2. Sigmund Freud

Sigmund Freud was the most influential person in the field of psychology. He was the founder of psychoanalysis, also the first person who proposed psychoanalysis personality theory.

2.1 Early experience

Freud was born in 1856 in Moravia. When Freud was born, his father was forty years old and his mother was only twenty [14]. In his childhood, Freud's father was strict and despotic [14]. However, his mother cared about him. He loved his mother in a special way, which influenced Freud's theory of Oedipus complex.

2.2 Id, Ego, and Super ego

Id, Ego, and Superego were the three layers of personality in Freud's theory. It was the basic structure of individual personality, according to Freud [5]. Id represented human's biological instinct. Freud described Id as "pleasure principle" and "primary-process thought", representing Id fulfill human need immediately in order to relief the nervous feeling [5]. Id is the most innate quality of human which represent their physiological desire. Ego used "reality principle" [5]. It was the process of rationalization. Freud also called ego as the "second-process thought" [5]. Freud compared the relationship between the ego and the id to that between a charioteer and his horses: the horses provide the energy and drive, while the charioteer provides direction [12]. Super ego represented the conscience, which people already formed in their early childhood. The combination of Id, Ego, and Superego forms the behavior and personality of an individual, which represented by their behavior in the society and their interaction with others. Id, Ego, and Superego theory is the fundamental theory in Freud's personality theory.

2.3 Defense mechanism

Anxiety was the signal of danger, representing that the ego was in a threatened situation [4]. As a result, ego must use different types of defense mechanisms to reduce anxiety. The defense mechanisms included repression, denial, reaction formation, projection, regression, rationalization, displacement, and sublimation [4]. Repression was the most common used mechanism, characterized by the unconscious replacement of conscious memories. It made people to "forget" traumatic memories. Freud regarded repression as an inner psychic process [1]. Repression was

Studies in Psychoanalysis Charles Baudouin, 1922 Research on the Couch R. D. Hinshelwood, 2013 This book is a relevant and timely contribution to the current debate about both the nature and validity of psychoanalysis and its body of knowledge Studies in psychoanalysis; an account of twenty-seven concrete cases Charles Baudouin, 1922 **Centres and Peripheries of Psychoanalysis** Richard Ekins, Dr. Ruth Freeman, 2018-11-13 This book provides an excellent introduction to the broad field of applied psychoanalysis and deals appropriately with clinical psychoanalytic concepts capable of being transferred from the analyst's consulting room. It discusses developmental factors entering into forms of religious experience *Research in Psychoanalysis* Theodore Shapiro, Robert N. Emde, 1995 Clinical psychoanalysis rests on a large edifice of theory that has until recently been studied only in practice. Empirical research on the psychoanalytical process and efforts to determine the effects of treatment came late. Nonetheless, there is a significant group of investigators who have been laboring to understand how and if analysis works. Their efforts are summarized in this volume by the researchers themselves who tell about their quest *An Open Door Review of Outcome Studies in Psychoanalysis* International Psychoanalytical Association. Research Committee, 1998 Psychology After Psychoanalysis Ian Parker, 2014-06-20 Ian Parker has been a leading light in the fields of critical and discursive psychology for over 25 years. The Psychology After Critique series brings together for the first time his most important papers. Each volume in the series has been prepared by Ian Parker and presents a newly written introduction and focused overview of a key topic area. Psychology After Psychoanalysis, the fourth volume in the series, is about the impact of psychoanalysis on critical debates in psychology. It addresses three central questions: Why is psychoanalysis re-emerging within psychology? How can psychoanalytic ideas inform psychosocial research? How does psychoanalysis explain the relation between the individual and society? International in scope, the book includes a clear account of psychoanalysis and the different varieties of the approach that are at work inside and outside the discipline of psychology. It explores the status of psychoanalysis as a series of concepts and as a methodology and shows how its clinical practice is crucial to the way that it operates now in an academic context. In doing so, the book sheds light on the arguments currently occurring inside psychoanalysis with discussion of its relation to critical psychology, psychosocial research, the health professions, culture, and social theory. Parker shows how psychoanalysis rests on a notion of method that is very different from mainstream psychology and unravels the implications of this difference. Early chapters examine the lines of debate between various psychoanalytical traditions and show how critical psychology challenges the assumptions about human nature and subjectivity made in conventional psychoanalysis. Later chapters introduce the methodological device of transference and explore how psychoanalysis may be utilized as a resource to review key questions of human culture. Psychology After Psychoanalysis is essential reading for students and researchers in psychology, psychosocial studies, sociology, social anthropology, and cultural studies, and to psychoanalysts of different traditions engaged

research and its long history within the psychoanalytic movement. Additional discussions by three prominent British psychoanalysts Anne Alvarez, Irma Brenman Pick and Rozine Jozef Perelberg expose a different point of view from that of Green and Stern. Also included is a previous debate on this topic between Andre Green and Robert S. Wallerstein, former president of the International Psychoanalytic Association. An illuminating introductory chapter by Riccardo Steiner further describes the main points of the debate with marvelous clarity. This book will be invaluable for all those who wish to involve themselves with contemporary views on this important topic.

Novel Education Deborah P. Britzman, 2006. What is a novel education like? The surprising reply supposes that fiction affects the crisis of understanding work within the human professions of teaching and psychoanalysis. The studies of learning and not learning presented begin with the delicate surprise made from representing affective experiences and conflicts within self/other relations. Freud's question of presenting psychoanalysis to others and the accidental pedagogy made continues to animate our debates on the uses of affected learning. *Novel Education* analyzes the perils and pleasures of inviting narrating and interpreting emotional experience in learning and not learning. Drawing upon contemporary psychoanalytic debates on the relation between understanding and therapeutic action, these studies open discussion on the unusual world of psychoanalytic methods and link free association and the transference to the aesthetic conflicts made from thinking about sexuality and the difficulties of inhibition in learning, listening and the teacher's memory of remembering learning to teach. *Novel Education* highlights a discussion of the teacher's depression and the difficulty of formulating subjective knowledge from practices, philosophies and theories in the human professions. It raises the question of how fields of thought and practice affect themselves. How may we describe the human idiom made in pedagogical and psychoanalytic relationships? And why join learning to not learning? This thought-provoking book is essential reading on a broad range of fields for undergraduate and graduate students as well as faculty members.
