Studies of Software Design David Alex Lamb, 1996-05-15 This book contains a refereed collection of thoroughly revised full papers based on the contributions accepted for presentation at the International Workshop on Studies of Software Design held in conjunction with the 1993 International Conference on Software Engineering ICSE 93 in Baltimore Maryland in May 1993 The emphasis of the 13 papers included is on methods for studying analyzing and comparing designs and design methods the topical focus is primarily on the software architecture level of design and on techniques suitable for dealing with large software systems The book is organized in sections on architectures tools and design methods and opens with a detailed introduction by the volume editor

The Cognitive Artifacts of Designing Willemien Visser, 2006-08-08 In this dynamic review and synthesis of empirical research and theoretical discussion of design as cognitive activity Willemien Visser reconciles and integrates the classical view of design as conceptualized by Herbert Simon's symbolic information processing approach with modern views of design such as the situativity approach as formulated by Donald Schon The author goes on to develop her own view on design in which design is most appropriately characterized as a construction of representations She lays the groundwork for the integration of design research and cognitive science This seemingly simple framework has implications that set the stage for this mutually beneficial integration

Computer Science Education Research Sally Fincher, Marian Petre, 2005-09-26 This book provides an overview of how to approach computer science education research from a pragmatic perspective It represents the diversity of traditions and approaches inherent in this interdisciplinary area while also providing a structure within which to make sense of that diversity It provides multiple entry points to literature to me

Studying Designers'05 John S. Gero, Nathalie Bonnardel, 2005

Theoretical and Empirical Studies of Software Development's Role as a Design Discipline Alexander Thomas Baker, 2010 It is widely accepted that creating an effective piece of software requires some degree of design But beyond this there are major gaps in the software engineering research community's concept of software design There is little consensus among researchers about the role of design in the software process and little research has been done into how software engineers in practice actually design The work presented in this dissertation aims to help remedy this state of affairs employing two main approaches The first is theoretical this dissertation begins with a framework for explaining design as it exists across various design disciplines This framework is then applied to software design The model presented here is unusual in that the entirety of the software development process from the conception of the program to its retirement is cast as a single unified design process Using this design oriented perspective on software development

several existing software process models are reconsidered and compared and observations about the nature of the software product are made The second approach is empirical this dissertation presents three studies of software designers in action Two of these studies focus on professional software designers who were asked to create a high level design for a traffic simulation program The third study examines a group of novice software designers who worked on the same problem and compares their processes to those exhibited by the professional designers Observations about the designers work are presented and several techniques for analyzing and visualizing software design processes are also demonstrated This dissertation aims to spur the study of software engineering as a design discipline Its primary contributions include a novel framework for considering design in general a new design oriented perspective on the software development process a rich set of observations about the processes employed by expert and novice software designers and numerous examples of analytical methods and visualization techniques that can be used to study software design

Analysing Design Thinking: Studies of Cross-Cultural Co-Creation Bo Christensen, Linden J. Ball, Kim Halskov, 2017-08-03 The scientific analysis of design thinking continues to burgeon and is of considerable interest to academic scholars and design practitioners across many disciplines This research tradition has generated a growing corpus of studies concerning how designers think during the creation of innovative products although less focus has been given to analysing how designers think when creating less tangible deliverables such as concepts and user insights **Analysing Design Thinking: Studies of Cross Cultural Co Creation** brings together 28 contributions from internationally leading academics with a shared interest in design thinking who take a close look at professional designers working on a project that not only involves soft deliverables but where a central role is played by co creation across multiple culturally diverse stakeholders This collection of detailed multi method analyses gives a unique insight into how a Scandinavian design team tackled a specific design task within the automotive industry over a four month design process All papers draw upon a common video based dataset and report analyses that link together a diversity of academic disciplines including psychology anthropology linguistics philosophy architecture management engineering and design studies The dataset affords multiple entry points into the analysis of design thinking with the selected papers demonstrating the application of a wide range of analytic techniques that generate distinct yet complementary insights Collectively these papers provide a coherent framework for analysing and interpreting design thinking in vivo through video based field studies

The Design of Instruction and Evaluation Mitchell Rabinowitz, Fran C. Blumberg, Howard T. Everson, 2004-09-22 This book is about empirically tested knowledge and principles that inform the design of instructional and evaluation systems and the use and promise of media and technology within such systems Historically psychology has informed the design of instructional and evaluation systems in different ways A behavioral perspective emphasizes the role of the environment in determining behavior a factor external to the learner A cognitive perspective focuses on the role of cognitive processing and constraints in determining learning factors that are internal to the learner This volume presents the

affordances approach which addresses how the environment and the affordances within it interact with cognitive processes to determine learning Insights into this interaction are presented It is the book s contention that the affordance approach represents an advancement over the behavioral and cognitive perspectives it is an evolution within the cognitive approach not an alternative to it The Design of Instruction and Evaluation Affordances of Using Media and Technology is intended for education practitioners responsible for the implementation of media and technology in classrooms for researchers and faculty and for use as a text in courses on media and technology use in educational settings instructional design and psychology of learning

Design Science Methodology for Information Systems and Software Engineering Roel J. Wieringa,2014-11-19 This book provides guidelines for practicing design science in the fields of information systems and software engineering research A design process usually iterates over two activities first designing an artifact that improves something for stakeholders and subsequently empirically investigating the performance of that artifact in its context This validation in context is a key feature of the book since an artifact is designed for a context it should also be validated in this context The book is divided into five parts Part I discusses the fundamental nature of design science and its artifacts as well as related design research questions and goals Part II deals with the design cycle i e the creation design and validation of artifacts based on requirements and stakeholder goals To elaborate this further Part III presents the role of conceptual frameworks and theories in design science Part IV continues with the empirical cycle to investigate artifacts in context and presents the different elements of research problem analysis research setup and data analysis Finally Part V deals with the practical application of the empirical cycle by presenting in detail various research methods including observational case studies case based and sample based experiments and technical action research These main sections are complemented by two generic checklists one for the design cycle and one for the empirical cycle The book is written for students as well as academic and industrial researchers in software engineering or information systems It provides guidelines on how to effectively structure research goals how to analyze research problems concerning design goals and knowledge questions how to validate artifact designs and how to empirically investigate artifacts in context and finally how to present the results of the design cycle as a whole
