

Introduction to Statistics for Psychology and Basic Concepts of Statistics

Data - **Information collected** to gain knowledge about a field or to answer a question of interest.

Data Sources include:

- Surveys (Mail, Telephone, Internet)
- Experiments (These days, huge data sets routinely generated in other ways in business, government, at Internet sites)

Statistics- Science of collection, presentation, analysis, and reasonable interpretation of data. **(the art and science of learning from data)**

Statistics provides methods for:

Design - **Planning/Implementing a study**

Sample survey or experiment?

How to choose people (subjects) for the study, and how many?

Description - **Graphical and numerical** methods for summarizing the data

Inference - Methods for making **predictions** about a population (total set of subjects of interest), based on a sample (subset of the sample on which study collects data)

Basic Concepts

- Population - The set of all items of interest in a statistical problem
- Parameter - A descriptive measure of a population
- Sample - A set of items drawn from a population
- Statistic - A descriptive measure of a sample

- Statistical inference - The process of making an estimate, prediction, or decision based upon sample data

Types of Data

1. Qualitative - **Categorical**, i.e., data represents categories
e.g. - religion, gender, etc.
2. Quantitative - Data are **numerical values**
 - ✓ Discrete(countable) - Counts of things. e.g. - Number of bedrooms
 - ✓ Continuous(interval) - Measurements. e.g. - Appraised value or square footage

Variable - any **characteristic of an individual or entity**. A variable can take different values for different individuals.

1. Nominal - **Categorical** (e.g., gender). The only operation that can be applied to Nominal variables is enumeration.
2. Ordinal - Variables with an inherent **rank or order**, (e.g. mild, moderate, severe). Can be compared for equality, or greater or less, but not how much greater or less.
3. Interval - Values of the **variable are ordered as in Ordinal**, and additionally, **differences between values are meaningful**, however, the scale is not absolutely anchored. (e.g. Calendar dates and temperatures)
4. Ratio - **Variables with all properties of Interval plus an absolute, non-arbitrary zero point**, (e.g. age, weight, temperature (Kelvin)).

Qualitative/non-parametric (you can't use statistical tests) - Nominal & Ordinal

Quantitative/parametric (you can use statistical tests) - Interval & Ratio

Numerical Descriptive Measures: Notation

- N = Size of Population
- n = size of sample
- μ = Population Mean
- \bar{x} = sample mean
- σ^2 = Population Variance
- σ = Population Standard Deviation
- s^2 = sample variance
- s = sample standard deviation

Descriptive statistics - statistical procedures used to summarize, organize, and simplify data. **describe**

Inferential statistics - consist of techniques that allow us to study samples and then make generalizations about the populations from which they were selected.

Study Guide To Statistics For Psychology:

Statistics for Psychology Research Adam T. Hutcheson, Kristina Groce Brown, 2024-11-21 This book aims to help psychology students build their skills to conduct research and analyses using Microsoft Excel's Data Analysis Toolpak. Concise yet comprehensive, this accessible textbook walks students through basic research methodology, central tendency, variability, standardized scores, t tests, independent and related samples One-way Analysis of Variance between groups and repeated measures, the Pearson correlation, and Chi-Square analyses. Each chapter includes examples of research questions to be addressed, the rationale for the analysis, a step-by-step analysis of the dataset in equation format, and using Microsoft Excel and how to present results in APA 7th Edition style. The extensive didactic material encompasses end-of-chapter questions, learning outcomes, sidebar boxes with common mistakes to avoid, and biographical sketches of those who developed research methods and statistical techniques. Students and instructors will also benefit from a companion website where PowerPoint slides and additional exercises, datasets, and resources are available. Ideal for undergraduate psychology courses, this textbook can also be of use for those interested in learning more about statistical research and its practical application at university and beyond.
