Sun Protection In Man Comprehensive Series In Photosciences V 3:

Sun Protection in Man P.U. Giacomoni, 2001-07-31 Sun Protection in Man looks at the beneficial and harmful effects of solar radiation. The physiological consequences of sun exposure have been systematically studied starting at the end of the nineteenth century and we now have accumulated knowledge about how Caucasian and Asian skins react to solar radiation. The chemical effects of solar ultraviolet radiation have been analyzed with particular emphasis during the second half of the twentieth century. Research on micro organisms has allowed us to understand the mechanisms of UV induced mutagenesis and photosensitization. Studies with laboratory rodents have opened the path to the understanding of UV induced immune depression, carcinogenesis, photo damage and photo aging. The results of these studies have enabled other scientists to investigate the same phenomena in human organs such as the skin and the eye. UV radiation damages hair as well. The present knowledge in these fields is summarized in some of the chapters of this monograph. Mass phenomenon in Europe with the generalization of summer vacations which were a consequence of social reforms introducing the concept of paid vacations. This created a need for protection and opened a market for sunscreens. This monograph is concerned with sun protection as a whole and is not just another book on sunscreens. Nonetheless in these days of general concern it is important to learn about the efficiency of sunscreens. Several authors discuss how to reduce the number of impinging photons and explain why sunscreens seem to offer less protection than expected. Guidelines are given on how to use sunscreens in everyday life which are expressed rigorously though clearly for access to the common reader. Our knowledge on the relationship between sun and humans is at the early stages of development. Industrial and commercial activities are concerned by the development of this knowledge and rules have been and will be promulgated to guarantee efficacy and safety of sun products. It is hoped that this monograph will be of interest to the scholar, the layman and the legislator.

Photodynamic Therapy and Fluorescence Diagnosis in Dermatology P. Calzavara-Pinton, R-M. Szeimies, B. Ortel, 2001-08-13 Photodynamic therapy has been widely investigated over the past two decades and is emerging as a promising therapeutic modality for skin cancers and several inflammatory diseases. This growing interest is based on the availability of a new simple effective and safe regimen using the topical application of a pro drug 5 aminolevulinic acid as well as on the development of new second generation photosensitizers namely 5 aminolevulinic acid esters, phthalocyanines, chlorins, porphycenes and hypericin. In contrast to hematoporphyrin derivatives these compounds are characterized by short lasting generalized skin photosensitivity. These dyes are available for either topical or systemic delivery and are well characterized. The basic principles of PDT is more complex than chemotherapy or other pharmacological modalities. PDT involves not only a drug but an otherwise harmless compound that is activated by visible light. The interaction of these two treatment components is PDT. The variability of these both components results in a complexity of the treatment that may disorient the clinician who does not have specific experience in this field. This book aims to focus experimental and clinical

findings on PDT in order to attract and direct the attention of a growing number of dermatologists *Photomovement* D.-P. Häder, M. Lebert, 2001-06-19 This volume emphasizes the involvement of all facets of biology in the analysis of environmentally controlled movement responses This includes biophysics biochemistry molecular biology and as an integral part of any approach to a closer understanding physiology The initial euphoria about molecular biology as the final solution for any problem has dwindled and the field agrees now that only the combined efforts of all facets of biology will at some day answer the question posed more than hundred years ago How can plants see One conclusion can be drawn from the current knowledge as summarized in this volume The answer will most likely not be the same for all systems *Annual Report of the Office of Science and Technology* Center for Devices and Radiological Health (U.S.).
