system Alfven 1954 The second phenomenon was discovered when large fluxes of high energy particles were detected from several solar flares or solar CR These are the called ground level events GLE and were first observed by ionization chambers shielded by 10 cm Pb and detected mainly from the secondary muon component CR that they caused during the events of the 28th of February 1942 the 7th of March 1942 the 25th of July 1946 and the 19th of November 1949 The biggest such event was detected on the 23rd of February 1956 see the detailed description in Chapters X and XI of Dorman M1957 The first phenomenon was investigated in detail in Dorman M1957 by first correcting experimental data on muon temperature effects and then by using coupling functions to determine the change in particle energy caused by the solar diurnal CR variation
