## **Studies In Mathematical Biology Part 2 Populations And Communities:**

**Studies in Mathematical Biology**, 1978      **Studies in Mathematical Biology** Simon A. Levin, 1978      *Bifurcation Theory and Applications* L. Salvadori, 2006-12-08      semigroup theory and applications Phillipe Clement, 2020-12-22 This book contains articles on maximal regulatory problems interpolation spaces multiplicative perturbations of generators linear and nonlinear evolution equations integrodifferential equations dual semigroups positive semigroups applications to control theory and boundary value problems      **Age-Structured Population Dynamics in Demography and Epidemiology** Hisashi Inaba, 2017-03-15 This book is the first one in which basic demographic models are rigorously formulated by using modern age structured population dynamics extended to study real world population problems Age structure is a crucial factor in understanding population phenomena and the essential ideas in demography and epidemiology cannot be understood without mathematical formulation therefore this book gives readers a robust mathematical introduction to human population studies In the first part of the volume classical demographic models such as the stable population model and its linear extensions density dependent nonlinear models and pair formation models are formulated by the McKendrick partial differential equation and are analyzed from a dynamical system point of view In the second part mathematical models for infectious diseases spreading at the population level are examined by using nonlinear differential equations and a renewal equation Since an epidemic can be seen as a nonlinear renewal process of an infected population this book will provide a natural unification point of view for demography and epidemiology The well known epidemic threshold principle is formulated by the basic reproduction number which is also a most important key index in demography The author develops a universal theory of the basic reproduction number in heterogeneous environments By introducing the host age structure epidemic models are developed into more realistic demographic formulations which are essentially needed to attack urgent epidemiological control problems in the real world      **Deterministic Aspects of Mathematical Demography** J. Impagliazzo, 2012-12-06 Mathematical Demography the study of population and its analysis through mathematical models has received increased interest in the mathematical community in recent years It was not until the twentieth century however that the study of population predominantly human population achieved its mathematical character The subject of mathematical demography can be viewed from either a deterministic viewpoint or from a stochastic viewpoint For the sake of brevity stochastic models are not included in this work It is therefore my intention to consider only established deterministic models in this discussion starting with the life table as the earliest model to a generalized matrix model which is developed in this treatise These deterministic models provide sufficient development and conclusions to formulate sound mathematical population analysis and estimates of population projections It should be noted that although the subject of mathematical demography focuses on human populations the development and results may be applied to any population as long as the preconditions that make the model valid are maintained Information concerning mathematical demography is at best

fragmented      **Mathematical Evolutionary Theory** Marcus Feldman, 2014-07-14 An international group of distinguished scientists presents an up to date survey of quantitative problems at the forefront of modern evolutionary theory Their articles illustrate results from the latest research in population and behavioral genetics molecular evolution and ecology Each author gives careful attention to the exposition of the models the logic of their analysis and the legitimacy of qualitative biological inferences The topics covered include stochastic models of finite populations and the sorts of diffusion approximations that are valid for their study models of migration kin selection geneculture coevolution sexual selection life history evolution the statistics of linkage disequilibrium and the molecular evolution of repeated DNA sequences and the HLA system in humans The fourteen contributions are presented in two sections Part I Stochastic and Deterministic Genetic Theory and Part II Behavior Ecology and Evolutionary Genetics Marcus W Feldman provides an introduction to each part The contributors are J G Bodmer W F Bodmer L L Cavalli Sforza F B Christiansen C Cockerham W J Ewens M W Feldman J H Gillespie R R Hudson N L Kaplan S Lessard U Liberman M E N Majerus P O Donald J Roughgarden S Tavar M K Uyenoyama G A Watterson and B Weir Originally published in 1989 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905      **World Congress of Nonlinear Analysts '92 V.**

Lakshmikantham, 2011-11-14 No detailed description available for World Congress of Nonlinear Analysts 92      Analytical Biogeography A.A. Myers, P. Giller, 2013-12-11 Biogeography may be defined simply as the study of the geographical distribution of organisms but this simple definition hides the great complexity of the subject Biogeography transcends classical subject areas and involves a range of scientific disciplines that includes geogra phy geology and biology Not surprisingly therefore it means rather different things to different people Historically the study of biogeogra phy has been concentrated into compartments at separate points along a spatio temporal gradient At one end of the gradient ecological biogeography is concerned with ecological processes occurring over short temporal and small spatial scales whilst at the other end historical biogeography is concerned with evolutionary processes over millions of years on a large often global scale Between these end points lies a third major compartment concerned with the profound effects of Pleistocene glaciations and how these have affected the distribution of recent organisms Within each of these compartments along the scale gradient a large number of theories hypotheses and models have been proposed in an attempt to explain the present and past biotic distribution patterns To a large extent these compartments of the subject have been non interactive which is understandable from the different interests and backgrounds of the various researchers Nevertheless the distribu tions of organisms across the globe cannot be fully understood without a knowledge of the full spectrum of ecological and historical

processes There are no degrees in biogeography and today's biogeographers are primarily born out of some other discipline

**Spatial Complexity, Informatics, and Wildlife Conservation** Samuel A. Cushman, Falk Huettmann, 2009-12-21 As Earth faces the greatest mass extinction in 65 million years the present is a moment of tremendous foment and emergence in ecological science With leaps in advances in ecological research and the technical tools available scientists face the critical task of challenging policymakers and the public to recognize the urgency of our global crisis This book focuses directly on the interplay between theory data and analytical methodology in the rapidly evolving fields of animal ecology conservation and management The mixture of topics of particular current relevance includes landscape ecology remote sensing spatial modeling geostatistics genomics and ecological informatics The greatest interest to the practicing scientist and graduate student will be the synthesis and integration of these topics to provide a composite view of the emerging field of spatial ecological informatics and its applications in research and management

**Cognitive Economics** Paul Bourguine, Jean-Pierre Nadal, 2013-03-20 The social sciences study knowing subjects and their interactions A cognitive turn based on cognitive science has the potential to enrich these sciences considerably Cognitive economics belongs within this movement of the social sciences It aims to take into account the cognitive processes of individuals in economic theory both on the level of the agent and on the level of their dynamic interactions and the resulting collective phenomena This is an ambitious research programme that aims to link two levels of complexity the level of cognitive phenomena as studied and tested by cognitive science and the level of collective phenomena produced by the economic interactions between agents Such an objective requires cooperation not only between economists and cognitive scientists but also with mathematicians physicists and computer scientists in order to renew study and simulate models of dynamical systems involving economic agents and their cognitive mechanisms The hard core of classical economics is the General Equilibrium Theory based on the optimising rationality of the agent and on static concepts of equilibrium following a point of view systemised in the framework of Game Theory The agent is considered rational if everything takes place as if he was maximising a function representing his preferences his utility function

**The Random Spatial Economy and its Evolution** Leslie Curry, 2020-07-09 First published in 1998 this volume spanning a lifetime's research is a highly innovative first attempt at a consistent theoretical approach to the elements structures and dynamics of the geography of agents settlements and trade Cause and effect are replaced by chance within constraints Populations are substituted for unreal representative individuals variability for uniformity probabilistic process for unique history Ignorance is a major factor in interpersonal and inter areal commercial relations so that the focus is on flows of information and their effects on the efficiency of the economy or alternatively on changes in its information content Recent work on spatial arrangements in many physical and social sciences is incorporated but always interpreted from an overriding geographical viewpoint Key concepts are locational potential distance friction mobility diffusion spatial pattern and texture adaptability efficiency spatial interaction and dependence Analytic methods

include autocovariance and transfer functions areal special densities and entropy Various forms of self organization of economic spatial patterns are examined *Perspectives in Ecological Theory* Jonathan Roughgarden, Robert M May, Simon A. Levin, 2014-07-14 This volume presents an overview of current accomplishments and future directions in ecological theory The twenty three chapters cover a broad range of important topics from the physiology and behavior of individuals or groups of organisms through population dynamics and community structure to the ecology of ecosystems and the geochemical cycles of the entire biosphere The authors focus on ways in which theory whether expressed mathematically or verbally can contribute to defining and solving fundamental problems in ecology A second aim is to highlight areas where dialogue between theorists and empiricists is likely to be especially rewarding The authors are R M Anderson C W Clark M L Cody J E Cohen P R Ehrlich M W Feldman M E Gilpin L J Gross M P Hassell H S Horn P Kareiva M A R Koehl S A Levin R M May L D Mueller R V O Neill S W Pacala S L Pimm T M Powell H R Pulliam J Roughgarden W H Schlesinger H H Shugart S M Stanley J H Steele D Tilman J Travis and D L Urban Originally published in 1989 The Princeton Legacy Library uses the latest print on demand technology to again make available previously out of print books from the distinguished backlist of Princeton University Press These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905 Journal of Mathematical Biology, 1990 Publishes papers in which mathematics is used to understand biological phenomena and mathematical papers which answer questions arising from models of biological phenomena A Celebration of Applied Probability Joseph Mark Gani, 1988 *Ecology* Robert E. **Proceedings of the 2003 ASME Summer Heat Transfer Conference**, 2003 **Differential Equations and Applications in Ecology, Epidemics, and Population Problems** Stavros Busenberg, 2012-12-02 Differential Equations and Applications in Ecology Epidemics and Population Problems is composed of papers and abstracts presented at the 1981 research conference on Differential Equations and Applications to Ecology Epidemics and Population Problems held at Harvey Mudd College The reported researches consist of mathematics that is either a direct outgrowth from questions in population biology and biomathematics or applicable to such questions The content of this volume are collected in four groups The first group addresses aspects of population dynamics that involve the interaction between spatial and temporal effects The second group covers other questions in population dynamics and some other areas of biomathematics The third group deals with topics in differential and functional differential equations that are continuing to find important applications in mathematical biology The last group comprises of work on various aspects of differential equations and dynamical systems not essentially motivated by biological applications This book is valuable to students and researchers in theoretical biology and biomathematics as well as to those interested in modern applications of differential equations **National Union**
