## **Studies On Fronting:**

Studies on Fronting Frank Jansen, 2019-11-05 No detailed description available for Studies on Fronting      **Velar fronting in German dialects: A study in synchronic and diachronic phonology** Tracy Alan Hall, 2022-11-30 Velar Fronting VF is the name for any synchronic or diachronic phonological process shifting the velar place of articulation to the palatal region of the vocal tract A well known case of VF in Standard German is the rule specifying that the fricative x assimilates to after front segments VF also refers to the change from velar sounds like k g to palatals c The book provides a thorough investigation of VF in German dialects Data are drawn from over 300 original sources for varieties that are or were spoken in Germany Austria Switzerland and other countries VF differs geographically along three parameters A triggers B targets and C outputs VF triggers A are typically defined according to vowel height In some systems VF is induced only by high front vowels in others by high and mid front vowels and in yet others by high mid and low front vowels Some varieties treat consonants r l n as triggers while others do not VF can be nonassimilatory in which case the rule applies even in the context of back segments In many varieties of German VF targets B consist of the two fricatives x but in other dialects the targets comprise x but not In some places VF affects not only x but also velar stops and the velar nasal The output of VF C is typically palatal given the input x but in many other places it is the alveolopalatal A major theme is the way in which VF interacts with synchronic and diachronic changes creating or eliminating structures which can potentially undergo it or trigger it In many dialects the relationship between velars x and palatals is transparent because velars only occur in the back vowel context and palatals only when adjacent to front sounds In that type of system independent processes can either feed VF by creating additional structures which the latter can undergo or they can bleed it by eliminating potential structures to which VF could apply In other dialects VF is opaque In one opaque system both velars x and palatals surface in the context of front segments Thus in addition to expected front vowel plus palatal sequences i there are also unexpected ones consisting of front vowel plus velar ix In a second type of opaque system velars and palatals are found in the context of back segments hence expected sequences such as i occur in addition to unexpected ones like      **Studies in Övdalian Morphology and Syntax** Kristine Bentzen, Henrik Rosenkvist, Janne Bondi Johannessen, 2015-01-22 vdalian is spoken in central Sweden by about 2000 speakers Traditionally categorized as a dialect of Swedish it has not received much international attention However vdalian is typologically closer to Faroese or Icelandic than it is to Swedish and since it has been spoken in relative isolation for about 1000 years a number of interesting linguistic archaisms have been preserved and innovations have developed This volume provides seven papers about vdalian morphology and syntax The papers all based on extensive fieldwork cover topics such as verb movement subject doubling wh words and case in vdalian Constituting the first comprehensive linguistic description of vdalian in English this volume is of interest for linguists in the fields of Scandinavian and Germanic linguistics and also historical linguists will be thrilled by some of the presented data The data and the analyses

presented here furthermore challenge our view of the morphosyntax of the Scandinavian languages in some cases as could be expected when a new language enters the linguistic arena *Studies in Contrastive Linguistics* Cristina Mourón Figueroa, Teresa Moralejo Gárate, Antonio Alvarez Rodriguez, 2006

Discourse-Related Features and Functional Projections Silvio Cruschina,2012-01-13 In this volume Silvio Cruschina uses a comparative analysis to determine the syntax of the functional projections associated with discourse related features and to account for the marked word orders found in Romance particularly in the fronting phenomena Several language specific analyses of discourse related phenomena have been proposed in the literature including studies on the notions of topic and

focus in Romance but the lack of a uniform definition of these notions together with different assumptions in relation to the triggering features has led to the perception that the Romance languages show many distinct and heterogeneous properties with respect to dislocation and fronting constructions This volume is intended to complement the existing literature by integrating recent work on the topic and by emphasizing original and unifying reflections that combine and coordinate diverse elements Cruschina's investigations clarify fundamental notions such as topic focus and contrast drawing on new data from Sicilian Sardinian and other Romance varieties
