**Studies on Large Branchiopod Biology and Conservation** Marie A. Simovich, Clay Sassaman, Denton Belk, 2013-04-17  
This volume is a collection of papers concerning the biology of large branchiopod crustaceans Anostraca Conchostraca and Notostraca Many of the individual papers were first presented at the Third International Large Branchiopod Symposium ILBS 3 held at the University of San Diego CA USA July 15 18 1996 Contributions on additional topics from participants at the symposium and from colleagues not able to join us in San Diego are also included In addition there is a supplement to the 1995 Checklist of the Anostraca The theme of the ILBS 3 was understanding and conserving large branchiopod diversity Researchers from around the world presented papers on a variety of topics related to conservation of large branchiopods with contributions ranging from alpha taxonomy and zoogeography to community structure and studies of ecology and evolution One important issue developed in many of the papers in this volume is the need to advance our understanding of basic aspects of branchiopod biology throughout the world in order to enhance our efforts to conserve them Although we have made important strides in understanding the biology of large branchiopods we have with few notable exceptions made little progress in assuring the conservation of their diversity We hope this volume will supply the reader with new ideas and generate enthusiasm for research and public education efforts on behalf of branchiopod conservation

**Studies on Large Branchiopod Biology and Aquaculture** Denton Belk, Henri J. Dumont, N. Munuswamy, 2012-12-06  
**Studies on Large Branchiopod Biology and Aquaculture II** Denton Belk, Henri J. Dumont, G. Maier, 2012-12-06 This book contains a collection of papers dealing with various aspects of the biology and aquaculture of the large branchiopod crustacea the Anostraca Conchostraca and Notostraca Included are many of the papers presented at the Second International Large Branchiopod Symposium convened in Ulm Germany 30 July 3 August 1993 Additional manuscripts contributed by colleagues who were unable to attend are also included A special feature of this volume is a checklist of the Anostraca including information on distribution location of type material taxonomic problems and literature references

**Aquatic Biodiversity II** H. Segers, K. Martens, 2006-01-20 Freshwater Biodiversity is a much underestimated component of global biodiversity both in its diversity and in its potential to act as models for fundamental research in evolutionary biology and ecosystem studies Freshwater organisms also reflect quality of water bodies and can thus be used to monitor changes in ecosystem health The present book comprises a unique collection of primary research papers spanning a wide range of topics in aquatic biodiversity studies and including a first global assessment of specific diversity of freshwater animals The book also presents a section on the interaction between scientists and science policy managers A target opinion paper lists priorities in aquatic biodiversity research for the next decade and several reactions from distinguished scientists discuss the relevance of these items from different points of view fundamental ecology taxonomy and systematics needs of developing countries present day biodiversity policy at European and at global scales It is believed that such a platform for the interaction between science and

science policy is an absolute necessity for the efficient use of research budgets in the future

**Recent Advances in Freshwater Crustacean Biodiversity and Conservation** Tadashi Kawai, D. Christopher Rogers, 2021-03-07 Recent Advances in Freshwater Crustacean Biodiversity and Conservation focuses on minor crustacean groups and regionally endemic groups all from freshwaters Chapters in this book cover crustaceans such as Maxillopods Mysids Cumaceans Isopods Amphipods Branchiopods Copepods and Decapods Each looks at global or regional fauna and discusses conservation issues for that group The majority of the chapters are based on papers presented at symposia organized by the editors at two international scientific meetings held in Barcelona and Washington DC The contributors are world renowned experts on their groups as well as on freshwater crustacean conservation and biodiversity at global levels It has previously been difficult for conservation managers NGOs and university professors and students who may not have access to comprehensive journal subscriptions to find relevant information on diversity and conservation of freshwater crustaceans This book meets that need addressing crustacean groups not previously treated and providing additional information beyond any presented in existing books As the editors write in their introduction we cannot conserve and we cannot protect what we do not know exists This is a reliable cutting edge reference for anybody involved in crustacean research students researchers agencies and NGOs as well as science educators conservationists and government conservation policymakers The book will also be useful for those working in aquaculture and fisheries given that many of the taxa discussed are economically important

**Biodiversity in Wetlands** Brij Gopal, Wolfgang J. Junk, J. A. Davis, Jennifer Ann Davis, 2000 Biodiversity of the French river Rhone and its floodplain current state historical changes and restoration potential Biodiversity changes in the lower Danube river system Plant diversity of fen landscapes in the Netherlands Factors influencing biodiversity in coastal plain wetlands of Southwestern Australia Wetlands of East Africa biodiversity exploitation and policy perspectives Biodiversity and conservation of afrotropical wetland invertebrates Diversity in some tropical wetland systems of South America Biodiversity in the pantanal wetland Brazil Biodiversity and management of Keoladeo National Park India a wetland of International importance South Asian wetlands and their biodiversity the role of monsoons Assessment determinants function and conservation of biodiversity in wetlands

**Fundamentals of Tropical Freshwater Wetlands** Tatenda Dalu, Ryan J. Wasserman, 2021-11-25 Fundamentals of Tropical Freshwater Wetlands From Ecology to Conservation Management is a practical guide and important tool for practitioners and educators interested in the ecology conservation and management of wetlands in tropical subtropical regions The book is written in such a way that in addition to scientists and managers it is accessible to non specialist readers Organized into three themed sections and twenty three chapters this volume covers a variety of topics exposing the reader to a full range of scientific conservation and management issues Each chapter has been written by specialists in the topic being presented The book recognizes that wetland conservation science and management are interlinked disciplines and so it attempts to combine several perspectives to highlight the interdependence between the

various professions that deal with issues in these environments Within each chapter extensive cross referencing is included so as to help the reader link related aspects of the issues being discussed Contributed to by global experts in the field of tropical wetlands Includes case studies and worked examples enabling the reader to recreate the work already done Focuses on tropical systems not available in any other book Freshwater Animal Diversity Assessment E.V. Balian,C. Lévêque,H. Segers,K. Martens,2008-04-27 This book offers a comprehensive study of species and genus level diversity and chorology of the global freshwater fauna to date It gives a state of the art assessment of the diversity and distribution of Metazoa in the continental waters of the world *Ecology and Conservation* Martin Thiel,2025 The tenth volume in The Natural History of the Crustacea series Ecology and Conservation emphasizes understanding the ecology of crustaceans as fundamental for their conservation in aquatic and terrestrial ecosystems Written by recognized experts studying a wide range of crustacean taxa and topics this volume synthesizes current research in a format that is accessible to a wide scientific audience
