

BIOPSYCHOLOGY

- explores the biological mechanisms that underlie behavior.

Among many things, it studies:

- Genetics - focusing on how inherited genes can affect not just the physiological, but psychological traits of a person.
- The structure and function of the nervous system.
- How the nervous system interacts with the endocrine system.

HUMAN GENETICS

Studying human genetics can help researchers understand the biological basis underlying the different behaviors, thoughts and reactions of humans.

- Why do two people infected by the same disease have different outcomes?
- Are there genetic components to psychological disorders, such as depression?
- How are genetic diseases passed through family lines?

THEORY OF EVOLUTION

Charles Darwin explored the concept of inheritance of traits throughout generations in his theory of evolution through natural selection.

- The organisms that are better suited for their environment will survive and reproduce, while those that are poorly suited for their environment will die off.

Characteristics and behaviors that impact survival and reproduction:

- Those that help protect against predators.
- Those that increase access to food.
