## **Study Of Practical Ability:**

*The analysis of practical skills* W.T. Singleton, 2013-06-29 The origins of this book are in my first attempts to understand psychology as a post war student in the Cambridge of the late 1940s Sir Frederic Bartlett and his colleagues in the Psychology Department were talking and writing about the concept of the skill as the fundamental unit of behaviour This made entire sense to me but not apparently to very many other people because the movement dwindled rapidly with the retirement of Sir Frederic in 1952 It got lost within performance studies which were essentially behaviouristic and stimulus response in origin a quite different style of thinking from the gestalt approach of skill psychology This is not a simple dichotomy of course and skill psychology does go some way towards the analytic approach in accepting that a science needs to have a basic element a unit from which the complexities of real behaviour can be constructed into which it can be analysed and in terms of which it can be described and understood The trick is to pick the right unit and I think that skills is an appropriate unit for human behaviour Note the plural although these units are elements they are not identical any more than the ninety odd elements of the physical world are identical The issue is sometimes clarified by considering the analogy with the attempt to describe a house The simplest observable elements here are the brick the piece of stone or the piece of wood

**Practical Skills in Science** R P Manchanda, Practical Book      *Practical Skills in Science Class 10* R.P. Manchanda, Practical Book      **Gender Differences in Performance of Chemistry Practical Skills Among Senior Six Students in Kampala District** Fredrick Ssempala, 2009 The aim of this study was to determine if there were gender differences in the performance of Chemistry practical skills among senior six girls and boys in selected mixed secondary schools in Kampala District from February to March 2004 The study participants were drawn from five mixed secondary schools in the district A total of fifty students participated half of them girls and the other half boys A cross sectional descriptive research design was used involving both quantitative and qualitative research strategies The instruments of data collection were a Chemistry practical test Quantitative analysis student questionnaires and in depth interviews Questionnaires were filled out by all students and forty randomly selected students were interviewed by the researcher The following were the findings 1 There were no statistical significant differences between girls and boys in their ability to manipulate the apparatus equipment take observation report record results correctly and compute interpret analyze results during the Chemistry practical 2 Both female and male students perceived interpreting analyzing results to be the most difficult skill to perform whereas manipulation of apparatus equipment was perceived to be the easy skill to perform during Chemistry practical by both gender 3 Girls had a poor self confidence in their ability to perform Chemistry practical as most of them 90% believed that boys are better than them Although girls performed slightly better than boys overall the skills in which boys performed slightly better than girls in recording reporting results correctly and computing interpreting analyzing results contributed a higher percentage in the assessment of Chemistry practical examinations by the UNEB examiners Hence it may be the

reason why boys perform better than girls in UNEB Chemistry practical examinations and in A Level Chemistry examinations generally. The recommendations were that Chemistry teachers in O Level should make sure that students are taught mole concept, volumetric analysis and Ionic Chemistry and balancing equations early enough so that both girls and boys are able to compute, interpret, analyze results. Also further research should be done on gender and Chemistry practical skill performance considering qualitative analysis practical for both O and A Level so that more knowledge is gained about the effect of gender on performance of Chemistry practical skills. **The Study of Real Skills** W.
