Michael Y. MAK, Albert T. SO, 2015-03-11 Feng Shui is not all about tradition The integration and harmony between the natural and built environments concerning modern architecture has long been discussed in Feng Shui or more academically Kan Yu Based on Scientific Feng Shui for the Built Environment Fundamentals and Case Studies published in 2011 this enhanced new edition has further taken into account the enhancements and new inputs in theories and applications Emphasis is placed on two themes sustainability and science New case studies regarding sustainable design as viewed from a Feng Shui perspective and integrated applications of different architectural models and their associations with Feng Shui concepts are added and elaborated On science other than exploring the new development of particle physics in relation to Feng Shui studies a totally new approach to numerology and Luo Shu study based on modern linear algebra may bring readers new insight into the possibility of researching Feng Shui mathematically in addition to the use of spherical trigonometry This book offers a remarkable in depth view of Feng Shui by integrating the historical theories with scientific explorations and examples of applications It once again demonstrates that Feng Shui can be studied scientifically and

eventually scientific Feng Shui may become a new field of science in the academic world as well as a professional and orthodox discipline of architectural design for the built environment Published by City University of Hong Kong Press

**Microbiomes of the Built Environment** National Academies of Sciences, Engineering, and Medicine,National Academy of Engineering,Division on Engineering and Physical Sciences,Health and Medicine Division,Division on Earth and Life Studies,Board on Infrastructure and the Constructed Environment,Board on Environmental Studies and Toxicology,Board on Life Sciences,Committee on Microbiomes of the Built Environment: From Research to Application,2017-10-06 People s desire to understand the environments in which they live is a natural one People spend most of their time in spaces and structures designed built and managed by humans and it is estimated that people in developed countries now spend 90 percent of their lives indoors As people move from homes to workplaces traveling in cars and on transit systems microorganisms are continually with and around them The human associated microbes that are shed along with the human behaviors that affect their transport and removal make significant contributions to the diversity of the indoor microbiome The characteristics of healthy indoor environments cannot yet be defined nor do microbial clinical and building researchers yet understand how to modify features of indoor environments such as building ventilation systems and the chemistry of building materials in ways that would have predictable impacts on microbial communities to promote health and prevent disease The factors that affect the environments within buildings the ways in which building characteristics influence the composition and function of indoor microbial communities and the ways in which these microbial communities relate to human health and well being are extraordinarily complex and can be explored only as a dynamic interconnected ecosystem by engaging the fields of microbial

biology and ecology chemistry building science and human physiology This report reviews what is known about the intersection of these disciplines and how new tools may facilitate advances in understanding the ecosystem of built environments indoor microbiomes and effects on human health and well being It offers a research agenda to generate the information needed so that stakeholders with an interest in understanding the impacts of built environments will be able to make more informed decisions

**Inventing the Built Environment** Juliana Yat Shun Kei, 2024-06-28 Why and how was the term built environment first introduced Inventing the Built Environment retrieves the origin of this ubiquitous term The articulation of the built environment Kei demonstrates coincided with the redefinition of education research and professional practices in architecture and town planning in 1960s Britain Concentrating on the half decade during which the term permeated the architectural and planning professions this book recalls a time when the built environment was conceived as a part of the British government's effort in national economic planning Inventing the Built Environment unpacks the proposal for a Research Council for the Built Environment to mobilise architecture and town planning for political economy How a relatively small group of architects planners politicians and researchers transposed scientific thoughts from biology economics and computation into the built environment will be considered too Kei highlights the assumptions about and classification of the population that were made when inventing the built environment The architectural and biosocial implications of the making and remaking of this architectural environmental notion in Britain and beyond will be revealed through the works of pre eminent architect planners including Richard Llewelyn Davies and William Holford At a time when environmental concerns again take the front seat of architectural and planning debates this book offers for scholars and students an alternative lens to reflect on the assumptions and bias that can be embedded in our architectural lexicons

**Wealth and the Built Environment** Emilio José García, Brenda Vale, 2025-04-26 The need to address global environmental problems is urgent The United Nations 17 Sustainable

Development Goals SDGs cover a wide range of global concerns from poverty hunger and gender equity to justice and climate action Concerningly the SDGs still have faith in economic growth and technological innovation as the means of fixing all global concerns including climate change What is not questioned is whether solving development and sustainability problems through economic growth for the accumulation of wealth for the few has led to many of the current unequal development and environmental problems If unfair growth and wealth accumulation have been part of the problem how can they be part of the solution The problem with the SDGs is that their fulfilment relies on wealth creation without the fundamental concomitant of wealth redistribution The one common driver of change affecting both sustainability and development that has not been included in the SDGs is wealth the central focus of this book SDG 11 sustainable cities and communities presents a further paradox unless the issue of wealth and its fair distribution is grasped Cities are the places where wealth is generated but are also places where only a minority are wealthy The wealth generated in cities leads to higher consumption of resources higher emissions and higher disparities and inequalities However any version of a sustainable future will happen in the built environment made according to current ideals like the present belief in overcoming all humanity's problems by becoming wealthier A fundamental assumption of this book is that the first step toward a fairer habitat that can be maintained with the resources available is only possible if we stop designing cities and buildings as if everyone were wealthy or had to become wealthy To achieve this goal it is essential to identify and raise awareness of the impact of wealth to question how the myths about the advantages of wealth were built where they come from what shape they take in the built environment and who benefits from them

The built environment and public health: New insights Linchuan Yang, Ruoyu Wang, Bao-Jie He, Yu Ye, Yibin Ao, 2023-02-06 *Heritage and Sustainability in the Islamic Built Environment* Bashir A. Kazimee, 2012 The essays in this book represent an up to date research and investigation into the various aspects of heritage and sustainability in the Islamic Built environments with an analysis of the problems that these cities face as they confront the forces of globalization and new development The authors in the book aim to the need for knowledge and understanding of Islamic society which is crucial for comprehending their rich architectural heritage and urban form with their intended meanings and uses The book embraces a wide array of principles strategies and precedents that are instrumental to the design of cities and communities in Islamic regions in order to sustain their cultural and environmental vitality The subject matter in this book will provide an important body of knowledge not only to the design professionals and students of architecture and planning but also includes useful information across disciplines such as social sciences planning urban geography and more

**Built Environment and Walking & Cycling Around Metro Stations** Yanan Liu, 2023-11-14 This book explores the relationship between pedestrians cyclists mode and route choice to from metro railway stations and the micro level street scale built environment in a second tier city in China More specifically it investigates how the street scale built environment influences pedestrians cyclists mode choice and route choice behavior

and examines user preferences for the micro level built environment around metro stations The focus on a second tier city is motivated primarily to expand the set of Chinese cities where the effects of the built environment on pedestrian cyclist mode and route choice have been studied Results demonstrate the effects of the street scale built environment on pedestrian flows The effects are higher for the main road which is directly connected with the metro station The findings of this book are expected to support the design of preferred walking biking built environments around a metro station This book appeals to urbanists planners engineers policy makers and those interested in a wide ranging overview of slow green transportation and built environment promotion These methods not only help to understand the quantitative relationship between built environment design and travel behavior but also support the evaluation and assessment of built environment design in urban planning projects It reduces the gap in our understanding of the quantitative relationship between the micro level built environment and pedestrians cyclists transportation mode and route choice around the metro station Both stated choice data and revealed choice data were used An extended set of micro level built environment attributes was developed Besides the widely studied transportation related factors street level built environment factors were studied using quantitative methods
