

One-year psychosocial functioning in patients in the early vs. late stage of bipolar disorder

Rosa AR, González-Ortega I, González-Pinto A, Echeburúa E, Comes M, Martínez-Arán A, Ugarte A, Fernández M, Vieta E. One-year psychosocial functioning in patients in the early vs. late stage of bipolar disorder.

Objective: The aim of this 1-year follow-up study was to compare functional outcome as well as clinical differences between patients with first- and multiple-episode bipolar disorder.

Method: Bipolar disorder patients with first ($n = 60$) and multiple episodes ($n = 59$) were recruited from two hospitals in Spain. The Functioning Assessment Short Test (FAST) was used to assess functioning. The Hamilton Depression Rating Scale (HAM-D) and the Young Mania Rating Scale (YMRS) were administered to assess mood symptoms.

Results: As expected, patients with first episode experienced a greater functioning compared to patients with multiple episodes (11.26 ± 10.94 vs. 26.91 ± 13.96 ; $r = 6.436$, $P < 0.001$). There were significant demographic and clinical differences between both groups. Baseline depressive symptoms ($F = 9.553$, $df = 4$, 102 ; $P < 0.001$) and age ($F = 14.145$, $df = 4$, 103 ; $P < 0.001$) were significantly associated with poor functional recovery at 6-month and 12-month assessment, respectively, in a group of patients with multiple episodes.

Conclusion: Our data give support to the model of staging in bipolar disorder, showing that the enduring neurotoxicity of repeated episodes may contribute to sustained impairment in multiple areas of psychosocial functioning.

Significant outcomes

- Patients with first-episode bipolar disorder had better functioning than those with multiple-episode bipolar disorder in areas such as autonomy, occupation, cognition, interpersonal relationships and leisure time.
- Baseline depressive symptoms were associated with poor functioning at 6-month period in a group of patients with multiple episodes.
- Our findings are consistent with the model of staging in bipolar disorder, showing that the toxic effects of mood episodes may contribute to sustained impairment in multiple areas of psychosocial functioning.

Limitations

- Naturalistic design: most patients were recruited from in-patient settings.
- First-episode patients may be getting more intensive support given that their care has been prioritized by the local healthcare authorities.
- The effects of medication may be different according to subgroup (first episode vs. multiple episode).
- Some baseline clinical differences were found between groups that might have had some influence on functional outcome.

Advances in Clinical Child Psychology Benjamin Lahey, 2013-11-11 **Advances in Clinical Child Psychology** is a serial publication designed to bring together original summaries of the most important new developments in the field of clinical psychology and its related disciplines Each chapter is written by a key

figure in an innovative area of research or by an individual who is particularly well qualified to comment on a topic of major contemporary importance. These chapters provide convenient concise explorations of empirical and clinical advances in the field. The contents of Volume 7 reflect the broad changes that are occurring within the field. The continuing growth of research emphasis on etiology is seen in two chapters on the causative role played by chemical substances, one chapter on the effects of divorce on children and one on the influence of televised violence. The difficult issue of suicide by children and adolescents is dealt with, the role of cognition in behavior disorders is explored and the clinical applications of direct behavioral observation are evaluated. Although the fields of pediatric psychology and prevention have been treated in earlier volumes in the series, progress in these fields has been so rapid that chapters on each topic have been included in the present volume. We appreciate the roles played by the advisory editors in suggesting excellent topics and thoughtfully editing the chapters. As always, our strongest thanks go to the volume's authors for their outstanding contributions.

By Their Own Young Hand Keith Hawton, Karen Rodham, 2006-06-15 The authors identify the risk and protective factors for self-harm, exploring why some adolescents with suicidal thoughts go on to harm themselves while others do not, what motivates some young people to seek help and whether distressed teenagers feel they receive the support they need. *Suicide in Children and Adolescents* Syed Arshad Husain, Trish Vandiver, 1986 What Works for Whom? Peter Fonagy, David Cottrell, Jeannette Phillips, Dickon Bevington, Danya Glaser, Elizabeth Allison, 2014-10-17 The standard reference in the field, this acclaimed work synthesizes findings from hundreds of carefully selected studies of mental health treatments for children and adolescents. Chapters on frequently encountered clinical problems systematically review the available data, identify gaps in what is known and spell out recommendations for evidence-based practice. The authors draw on extensive clinical experience as well as research expertise. Showcasing the most effective psychosocial and pharmacological interventions for young patients, they also address challenges in translating research into real-world clinical practice.

New to This Edition: Incorporates over a decade of research advances and evolving models of evidence-based care. New chapter topic: child maltreatment. Separate chapters on self-injurious behavior, eating disorders and substance use disorders, previously covered in a single chapter on self-harming disorders. Expanded chapters on depression, anxiety and conduct disorder. Includes reviews of the burgeoning range of manualized psychosocial treatment packages for children.

Suicide in Children and Adolescents George MacLean, 1990 **Tilt** Kalman J. Kaplan, 2020-04-01 An alternative to existing bipolar choices, this book looks at individuals and their distances from the self, individuation, deindividuation and from others, attachment, detachment. Simultaneously theoretical, empirical and applied, this book can be reasonably applied to all types of individuals involved in interpersonal situations regardless of culture, age, gender or sexual orientations. Broken into four parts. In the first part, Definitions and Measurements, the author includes an introduction to the Individuation Attachment Questionnaire. Implications of TILT for Individuals is the basis for part two and includes a view of TILT across the life span. The next section extends the analysis to

TILT for Couples and Families The clinician counselors and individuals attempting to help himself herself are addressed in the final part TILT for the Clinician and includes application of TILT to everyday life The text brings to life through extensive description the questions and situations consistently raised in couples therapy space too much or not enough TILT Teaching Individuals To Live Together presents a unique model of individuation and attachment and was developed to facilitate the understanding of the complex relationship between these two developmental processes across the life span The model shows how we gradually develop our boundaries and hence reduce the need for defensive interpersonal walls The TILT Model has applications in the fields of therapy education and organizational development Thus it will be of interest to mental health professionals including psychotherapists psychologists counselors social workers and marriage and family therapists Practitioners of transactional analysis will find this book of supreme interest and usefulness
