## **Suicide In Alcoholism:**

**Suicide in Alcoholism** George Earl Murphy, 1992 Alcoholics commit about 25% of the more than 30 000 suicides per year in the U S This unique revealing study discusses 50 actual cases of alcoholics who took their lives The first part of the book covers the background of the study the method of investigation and the life histories This leads to the identification of seven risk factors for suicide in alcoholics none of them acute Comparing those findings to the same factors in groups of living alcoholics shows that the risk factors are all more frequently present in the suicides than the living alcoholics Moreover they act in a cumulative fashion the greater the number of factors present the greater the risk of suicide The case histories describe how both alcoholism and its suicidal outcome span the ranges of age sex race and socioeconomic characteristics This accessible work offers a broad understanding of the determinants and predictors of suicide in alcoholics and indicates practical measures to prevent these suicides

mollify that pain Shneidman 1 also pointed out that the main sources of psychological pain such as shame guilt rage loneliness hopelessness and so forth stem from frustrated or thwarted psychological needs These psychological needs include the need for achievement for affiliation for autonomy for counteraction for exhibition for nurturance for order and for understanding Shneidman 2 who is considered the father of suicidology has proposed the following definition of suicide Currently in the Western world suicide is a conscious act of self induced annihilation best understood as a multidimensional malaise in a needful individual who defines an issue for which the suicide is perceived as the best solution Shneidman has also suggested that that suicide is best understood not so much as a movement toward death as it is a movement away from something and that something is always the same intolerable emotion unendurable pain or unacceptable anguish Strategies involving restriction of access to common methods of suicide have proved to be effective in reducing suicide rates however there is a need to adopt multi sectoral approaches involving other levels of intervention and activities such as crisis centers There is compelling evidence indicating that adequate prevention and treatment of depression alcohol and substance abuse can reduce suicide rates School based interventions involving crisis management self esteem enhancement and the development of coping skills and healthy decision making have been demonstrated to reduce the risk of suicide among the youth Worldwide the prevention of suicide has not been adequately addressed due to basically a lack of awareness of suicide as a major problem and the taboo in many societies to discuss openly about it In fact only a few countries have included prevention of suicide among their priorities Reliability of suicide certification and reporting is an issue in great need of improvement It is clear that suicide prevention requires intervention also from outside the health sector and calls for an innovative comprehensive multi sectoral approach including both health and non health sectors e g education labour police justice religion law politics the media

The Biology of Alcoholism Benjamin Kissin, 2012-12-06 Pathogenesis is defined in Blakiston's Medical Dictionary as the course of development of disease including the sequence of processes or events from inception to the characteristic lesion or disease The central position of the word pathogenesis in the titles of Volumes 6 and 7 in itself connotes a bias on the part of the editors in favor of the disease concept of alcoholism inasmuch as the end product of the pathogenetic process is presumed to be a disease But the disease model as here conceptualized is vastly different from that of Jellinek or of Alcoholics Anonymous or of psychoanalysis In those theories alcoholism is seen as the inevitable consequence of some specific flaw in the heredity or the experience of the afflicted individual that inexorably leads to alcoholism In these present volumes the alcoholic syndrome is viewed rather as the outgrowth of the interaction of a variety of biological psychological and social influences which depending on the predominance of one or another may lead to different types of alcoholism This view which has been labeled the bio psycho social perspective encompasses a larger view of the dynamics of the development of alcoholism incorporating data from each of the phenomenologic levels involved An additional complication arises from the fact that the physiological and psychosocial stigmata of alcoholics which are

probably most often the result of prolonged drinking frequently have come to be considered as causes of the disease

Mapping the Social Consequences of Alcohol Consumption Harald Klingemann, G. Gmel, 2013-03-14 Research on alcohol related consequences has traditionally focused mainly on health aspects of alcohol consumption or effects which can be more easily quantified or measured It is evident that alcohol has many consequences which can be characterised as social in nature and which are not or not only medical and are directly health related Such consequences include violence crime and psychosocial factors The increasing relevance of consequences of alcohol consumption other than medical is also reflected in the second European Action Plan 2000 2004 of WHO aiming at the prevention and reduction of harm done by alcohol to the health and wellbeing of individuals families and communities This book attempts to provide a comprehensive overview of social consequences of alcohol consumption on the individual group organisational and societal level It is a result of a two year collaborative study under the leadership of WHO Euro with the participation of alcohol researchers from Finland Germany Norway Scotland and Switzerland Although the book was written by experts in the field it is targeted not only at scientists but at all people dealing with alcohol related problems in

practice      **Alcohol** Norman S. Miller, Mark S. Gold, 2013-11-11 This book is written for a truly general medical audience. Clinicians, researchers, residents, and students will find Alcohol a direct treatment of the major drug problem in America. Along with the first volume in this series on marijuana, Alcohol is timely and relevant. The subject is presented with clarity in an effort to provide professionals and interested readers with a basic background in the field of alcohol studies. The emphasis is on what is known and can be counted on as fundamental knowledge on the various aspects of history, epidemiology, diagnosis, treatment, and prevention of alcoholism. Because drugs other than alcohol are such an important feature of the contemporary alcoholic, they are covered as a part of the natural history of alcoholism. Change and progress are essential to knowledge; past and current research in the alcohol field as well as detailed discussions of what further needs to be investigated are included in the volume. The student as well as the practitioner will find the contents useful for didactic purposes as well as a clinical reference. We believe that the researcher will also profit from the comprehensive coverage of the subject. The chapters are organized in sections to highlight important topics and are arranged in a sequence to ensure a logical development of the subject alcohol. Throughout the book we combine our clinical and research experiences to provide a synthesis that we hope will have widespread clinical usefulness. N S M      *Alcoholism and Clinical Psychiatry* Joel Solomon, 2012-12-06 It is well known that alcoholism continues to be one of this country's major public health problems. This issue is carefully documented by Dr. Gerald Klerman, Chief of ADAMHA, in the second chapter of this volume. In spite of the major role that alcohol plays in the health care issues of internal medicine, neurology, and psychiatry, the subject continues to fall between the cracks of the various disciplines. For this reason, it has become almost a discipline of its own; yet there are no academic departments of alcoholism because academic departments are unidisciplinary, and alcoholism is clearly a multidisciplinary field within medicine. In spite of the many disciplines involved in the study and treatment of alcoholism, psychiatry continues to have a special, albeit often neglected, relationship to alcoholism, and it is the articulation of that relationship which prompted the Department of Psychiatry at the Downstate Medical Center to organize the conference upon which many chapters in this volume are based. Particular emphasis in selecting the topics to be covered was placed on the interface between alcoholism and clinical psychiatry, including affective disorders, schizophrenia, suicide, adolescence, the special problems of women, and psychotherapy, to mention only some of them.      **Drinking and Casualties** Norman Giesbrecht, 2003-08-29 International Team of contributors from Fiji, Australia, Mexico, USA, Switzerland, Finland, Canada, Poland, and France. In doing so, he clarifies some issues and provides a source of information for police officers, administrators, and academic researchers. In this lucidly written book of ten chapters, Doctor Violanti discusses the classical studies in suicide, the accuracy and validity of police suicide rates, probable precipitating factors associated with
