Suicide In Alcoholism:

Suicide in Alcoholism George Earl Murphy, 1992 Alcoholics commit about 25% of the more than 30 000 suicides per year in the U S This unique revealing study discusses 50 actual cases of alcoholics who took their lives The first part of the book covers the background of the study the method of investigation and the life histories This leads to the identification of seven risk factors for suicide in alcoholics none of them acute Comparing those findings to the same factors in groups of living alcoholics shows that the risk factors are all more frequently present in the suicides than the living alcoholics Moreover they act in a cumulative fashion the greater the number of factors present the greater the risk of suicide The case histories describe how both alcoholism and its suicidal outcome span the ranges of age sex race and socioeconomic characteristics This accessible work offers a broad understanding of the determinants and predictors of suicide in alcoholics and indicates practical measures to prevent these suicides

Kissin,2012-12-06 Pathogenesis is defined in Blakiston s Medical Dictional as the course of development of disease including the sequence of processes or events from inception to the characteristic lesion or disease The central position of the word pathogenesis in the titles of Volumes 6 and 7 in itself connotes a bias on the part of the editors in favor of the disease concept of alcoholism inasmuch as the end product of the pathogenetic process is presumed to be a disease But the disease model as here conceptualized is vastly different from that of Jellinek or of Alcoholics Anonymous or of psychoanalysis In those theories alcoholism is seen as the inevitable consequence of some specific flaw in the heredity or the experience of the afflicted individual that inexorably leads to alcoholism In these present volumes the alcoholic syndrome is viewed rather as the outgrowth of the interaction of a variety of biological psychological and social influences which depending on the predominance of one or another may lead to different types of alcoholism This view which has been labeled the bio psycho social perspective encompasses a larger view of the dynamics of the development of alcoholism incorporating data from each of the phenomenologic levels involved An additional complication arises from the fact that the physiologic and psychosocial stigmata of alcoholics which are probably most often the result of prolonged drinking frequently have come to be considered

as causes of the disease *The International Handbook of Suicide and Attempted Suicide* Keith Hawton, Kees van Heeringen, 2000-11-21 Recent research in the area of suicidology has provided significant new insights in the epidemiological, psychopathological and biological characteristics of suicidal behaviour. The International Handbook of Suicide and Attempted Suicide is the first book to bring together this expertise and translate it into practical guidelines for those responsible for policy issues and for those involved in the treatment and prevention of suicidal behaviour. Leading international authorities provide a truly comprehensive and research based reference to understanding treating and preventing suicidal behaviour. They explore concepts and theories which best guide work within this field and detail key research which has supported conceptual developments, preventive interventions and clinical treatment. No self-respecting worker in deliberate self-harm and suicide prevention, either clinical or research, can afford to be without access to this comprehensive handbook. Possession and regular use may well become a marker of serious involvement in the subject. This is the most comprehensive up-to-date informative and well-written source of information on suicide and suicidal behaviour, an invaluable work of reference which will be essential for clinicians and researchers for many years to come. Andrew Sims, Emeritus Professor of Psychiatry, St James's University Hospital, Leeds, UK, *British Journal of Psychiatry*.

Research on the Neurobiology of Alcohol Use Disorders Leo Sher, 2008 This book describes the neurobiological mechanisms of alcohol abuse and dependence, including the role of serotonergic, dopaminergic, noradrenergic and hypothalamic-pituitary-adrenal systems in alcohol use disorders, and the results of neuroimaging studies are presented. The neurobiology of comorbidity of alcohol use disorders with other psychiatric disorders is also discussed. Research on the neurobiology of alcohol abuse and dependence is very important. Therefore, this book will be of interest to biomedical researchers, physicians and other clinicians, students and anyone who is interested in the mechanisms of addictive disorders.

Mapping the Social Consequences of Alcohol Consumption Harald Klingemann, G. Gmel, 2013-03-14 Research on alcohol-related consequences has traditionally focused mainly on health aspects of alcohol consumption or effects which can be more easily quantified or measured. It is evident that alcohol has many consequences which can be characterised as social in nature and which are not only medical and are directly health-related. Such consequences include violence, crime and psychosocial factors. The increasing relevance of consequences of alcohol consumption other than medical is also reflected in the second European Action Plan 2000-2004 of WHO, aiming at the prevention and reduction of harm done by alcohol to the health and wellbeing of individuals, families and communities. This book attempts to provide a comprehensive overview of social consequences of alcohol consumption on the individual, group, organisational and societal level. It is a result of a two-year collaborative study under the leadership of WHO Euro, with the participation of alcohol researchers from Finland, Germany, Norway, Scotland and Switzerland. Although the book was written by experts in the field, it is targeted not only at scientists but at all people dealing with alcohol-related problems in practice.

Alcohol Norman S. Miller, Mark S. Gold, 2013-11-11 This book is written for a truly general medical audience.

Clinicians researchers residents and students will find Alcohol a direct treatment of the major drug problem in America. Along with the first volume in this series on marijuana Alcohol is timely and relevant. The subject is presented with clarity in an effort to provide professionals and interested readers with a basic background in the field of alcohol studies. The emphasis is on what is known and can be counted on as fundamental knowledge on the various aspects of history epidemiology diagnosis treatment and prevention of alcoholism. Because drugs other than alcohol are such an important feature of the contemporary alcoholic they are covered as a part of the natural history of alcoholism. Change and progress are essential to knowledge past and current research in the alcohol field as well as detailed discussions of what further needs to be investigated are included in the volume. The student as well as the practitioner will find the contents useful for didactic purposes as well as a clinical reference. We believe that the researcher will also profit from the comprehensive coverage of the subject. The chapters are organized in sections to highlight important topics and are arranged in a sequence to ensure a logical development of the subject alcohol. Throughout the book we combine our clinical and research experiences to provide a synthesis that we hope will have widespread clinical usefulness.

N S M **Alcoholism and Clinical Psychiatry**

Joel Solomon, 2012-12-06

It is well known that alcoholism continues to be one of this country's major public health problems. This issue is carefully documented by Dr. Gerald Klerman, Chief of ADAMHA, in the second chapter of this volume. In spite of the major role that alcohol plays in the health care issues of internal medicine neurology and psychiatry the subject continues to fall between the cracks of the various disciplines. For this reason it has become almost a discipline of its own yet there are no academic departments of alcoholism because academic departments are unidisciplinary and alcoholism is clearly a multidisciplinary field within medicine. In spite of the many disciplines involved in the study and treatment of alcoholism psychiatry continues to have a special albeit often neglected relationship to alcoholism and it is the articulation of that relationship which prompted the Department of Psychiatry at the Downstate Medical Center to organize the conference upon which many chapters in this volume are based. Particular emphasis in selecting the topics to be covered was placed on the interface between alcoholism and clinical psychiatry including affective disorders schizophrenia suicide adolescence the special problems of women and psychotherapy to mention only some of them.
