Proceedings Of The 19th Annual Meeting Of The Asia Oceania Geosciences Society (Aogs 2022) Shie-yui Liong,Masaki Satoh,2023-04-26 The 19th Annual Meeting of the Asia Oceania Geosciences Society AOGS 2022 was held from 1st to 5th August 2022 This proceedings volume includes selected extended abstracts from a challenging array of presentations at this conference The AOGS Annual Meeting is a leading venue for professional interaction among researchers and practitioners covering diverse disciplines of geosciences **Incoming Asteroid!** Duncan Lunan,2013-10-17 *Incoming Asteroid* is based on a project within ASTRA the Association in Scotland to Research into Astronautics to provide scientific answers to the question what would we do if we knew there was going to be an asteroid impact in ten years time or less Clearly there are many things humanity can do nothing about for example an unseen object traveling towards us so fast that we have no time

to prepare for an object so large it may be unstoppable. A realistic hazard model was decided upon and the scenario developed from that: an incoming object about 1 kilometer in diameter in an orbit ranging from the outer rim of the Asteroid Belt to within that of Earth's. Three basic possibilities are considered in this book. The first is the deflection of the asteroid using remote probes along with a number of possible technologies to change the asteroid's course. Second is the attempt of a manned mission in order to plant a propulsion system on the asteroid to push it into a different orbit. Third is the nuclear option: a last ditch attempt to break up and then disperse the asteroid using nuclear weapons. A rather impractical combination of these second and third options were used as the plot of the popular 1998 Bruce Willis feature film *Armageddon*. Although the cost of developing the technology needed to protect the Earth would be substantial, there would certainly be spin-off benefits. These could eventually result in practical small-scale atomic energy sources, new propulsion systems that could make extraterrestrial mining within the solar system a possibility, and other as yet unforeseen benefits. And finally, *Incoming Asteroid* considers the political implications: how governments across the world should best react to the threat with a view to minimizing loss of life and in the weeks running up to the possible impact preventing panic in the population.

Similarity in Diversity. D. L. Morabito, Shigeji Fujita, Y. Okamura, 2003. This volume brings together interdisciplinary topics in condensed matter theory and related disciplines with an emphasis on the common concerns of mostly theorists applying advanced many particle methods in diverse areas: solid state and low temperature physics, atomic, subatomic, and statistical physics, engineering sciences, keeping a sharp focus on theoretical developments which cross borders between subfields of condensed matter physics and which provide new approaches to outstanding problems. The book records the fascinating variety of new results associated with the idea of similarity in diversity. In perusing this volume, the reader will be stimulated to discern threads of similarity in the great diversity of physical phenomena and theoretical models proposed to explain them, and indeed there are threads that can be glimpsed in the table of contents and ramifications of these threads as one reads through the articles. One conclusion is clear: the search for similarity in diversity is a powerful approach to interdisciplinary science.
