Situation Theory And Applications:

Situation Theory and Its Applications: Volume 1 Robin Cooper, Kuniaki Mukai, John Perry, Center for the Study of Language and Information (U.S.), 1990 Situation Theory grew out of attempts by Jon Barwise in the late 1970s to provide a semantics for naked infinitive perceptual reports such as Claire saw Jon run Barwise's intuition was that Claire didn't just see Jon an individual but Jon doing something a situation Situations are individuals having properties and standing in relations A theory of situations would allow us to study and compare various types of situations or situation like entities such as facts events and scenes One of the central themes of situation theory of meaning and reference should be set within a general theory of information one moreover that is rich enough to do justice to perception communication and thought By now many people have contributed by the need to give a rigorous mathematical account of the principles of information that underwrite the theory

Situation Theory and Its Applications: Volume 3 Robin Cooper, Peter Aczel, Kuniaki Mukai, John Perry, 1990 Situation theory is the result of an interdisciplinary effort to create a full fledged theory of information Created by scholars and scientists from cognitive science computer science and AI linguistics logic philosophy and mathematics it aims to provide a common set of tools for the analysis of phenomena from all these fields Unlike Shannon Weaver type theories of information which are purely quantitative theories situation theory aims at providing tools for the analysis of the specific content of a situation signal message data base statement or other information carrying situation The question addressed is not how much information is carried but what information is carried

from researchers and practitioners from around the world who are studying and applying SA from a cognitive perspective The 41 contributors represent many different theoretical perspectives research approaches and domains of application Each chapter has a primary emphasis around one of three main topics theory measurement and application and examines the considerable inter linkage between them To bring further coherence to the book all of the contributors received draft manuscripts of those chapters most relevant to their own Designed to be completely international and interdisciplinary the authors themselves present varied perspectives from academic departments and industrial organisations from around the world and from broad applications with contributions from researchers in the domains of process control sport aviation transportation and command and control The readership includes practitioners academics and researchers within human factors ergonomics and industrial psychology Graduate and Undergraduate students specialising within these areas during their final year

Theory and Application of Diagrams Michael Anderson, Peter Cheng, Volker Haarslev, 2003-07-31
Diagrams 2000 is dedicated to the memory of Jon Barwise Diagrams 2000 was the first event in a new interdisciplinary conference series on the Theory and Application of Diagrams It was held at the University of Edinburgh Scotland September 1-3 2000 Driven by the pervasiveness of diagrams in human communication and by the increasing availability of graphical environments in computerized work the study of diagrammatic notations is emerging as a research field in its own right This development has simultaneously taken place in several scientific disciplines including amongst others cognitive science artificial intelligence and computer science Consequently a number of different workshop series on this topic have been successfully organized during the last few years Thinking with Diagrams Theory of Visual Languages Reasoning with Diagrammatic Representations and Formalizing Reasoning with Visual and Diagrammatic Representations Diagrams are simultaneously complex cognitive phenomena and sophisticated computational artifacts So to be successful and relevant the study of diagrams must as a whole be interdisciplinary in nature Thus the workshop series mentioned above decided to merge into Diagrams 2000 as the single interdisciplinary conference for this exciting new field It is intended that Diagrams 2000 should become the premier international conference series in this area and provide a forum with sufficient breadth of scope to encompass researchers from all academic areas who are studying the nature of diagrammatic representations and their use by humans and in machines
